

# Quality Assurance for Mobile Developers

Christelle Scharff

[mobilesenegal@gmail.com](mailto:mobilesenegal@gmail.com) <http://senmobile.com>

What is a bug?

# What is a bug?

- Anything that causes an unnecessary or unreasonable reduction of the quality of a software product [Cem Kaner and James Bach]
- A bug is anything about the product that threatens its value [James Bach and Michael Bolton]
- A bug is something that bugs somebody [James Bach]
- Failure to meet reasonable expectations of a user [Ed Myers]

What is a quality?

# What is quality?

- Conformance with requirements [Philip Crosby]
  - Requirements may or may not be written down
- Quality is value to some person [Gerald Weinberg]
- Quality is fitness for use [Joseph Juran]
  - Customer satisfiers and dissatisfiers

Standard

Measure

# What is quality?

- The totality of features and characteristics of a product that bear on its ability to satisfy a given need [American Society for Quality (ASQ)]
- The total composite product and service characteristics of marketing, engineering, manufacturing and maintenance through which the product and service in use will meet expectations of the customer [Armand V. Feigenbaum, Total Quality Control, Fortieth Anniversary Edition]

# Quality is Subjective

Quality for ...?

Customer, user, marketing, customer service,  
technical writer, manager, developer, designer, UI  
designer, testers...

# Quality is Multidimensional

- Reliability
- Usability
- Maintainability
- Testability
- Scalability
- Functionality / capability
- Speed of operation
- Localizability
- Documentability
- Trainability
- Technical-supportability
- ...

# What is software quality assurance?

- The planned and systematic activities implemented in a quality system so that quality requirements for a product or service will be fulfilled [American Society for Quality (ASQ)]
- All the planned and systematic activities implemented within the quality system, and demonstrated as needed, to provide adequate confidence that an entity will fulfill requirements for quality [American National Standard (ANSI/ASQC A8402-1994)]
- (1) A planned and systematic pattern of all actions necessary to provide adequate confidence that an item or product conforms to established technical requirements.
- (2) A set of activities designed to evaluate the process by which products are developed or manufactured.
- [IEEE Standard 610.12-1990]

Preventive

# Quality assurance

- *Verification - Are we building the product right?*
  - Focus: documents, practices
  - Possible activities: reviews (walkthrough and inspection), meetings
  - Possible outputs: documents, checklists
- *Validation - Are we building the right product?*
  - Possible activities: testing
  - Possible outputs: bug reports

What is testing?

# What is testing?

- “A technical investigation of the product under test conducted to provide stakeholders with quality-related information.” [Cem Kaner, James Bach]

# Testing

- **Black Box Testing**

Testing software without any knowledge of the underlying code or internal structure of the program.

- **Acceptance Testing**

Testing performed by the customer or a representative of the customer in order to approve the system to go live

- **Alpha Testing**

Testing in the lab

- **Beta Testing**

Testing by end users

# Testing

- **Functional Testing**

Testing that focuses on the observable behavior of a software and looks at the program as a collection of functions / features

- **Glass Box Testing / White Box Testing**

- Testing with knowledge of the underlying code

- **Programmer Testing**

Testing when programmers test their own code or the code they maintain

- **Negative Testing**

Testing using invalid inputs to test a program's error handling

# Testing

- **Performance testing**

Testing conducted to evaluate the compliance of a system or component with specified performance requirements (Term often used interchangeably with 'stress' and 'load' testing)

- **Parafunctional Testing**

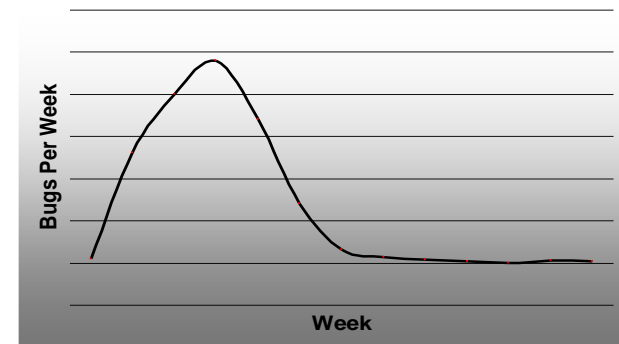

Testing inspired by the quality requirements (ities)

- **Regression Testing**

To test revised software to be sure that previously working functions were not impacted

# Fundamental questions in testing

- Why are you testing? What are you trying to learn?
  - **Mission of testing**
- How should you organize your work to achieve your mission?
  - **Strategy of testing**
- How will you know whether the program passed or failed the test?
  - **Oracles**
- What would it take to do a complete testing job?
  - **Impossibility of complete testing**
- How much testing is enough?
  - **Measurement and stopping testing**

# Exercise

- Test the ProSum software
- Mission: Late development to release the software

# What is a good tester?

- “The best tester isn’t the one who finds the most bugs or embarrasses the most programmers. The best tester is the one who gets the most bugs fixed.” TCS 2.0
- “The best tester isn’t the one who finds the most bugs or embarrasses the most programmers. The best tester is the one who gets the **right** bugs fixed.” TCS 3.0

# Bug reporting

- Bug advocacy = Selling bugs
  - The art of motivating and convincing developers to fix bugs and removing objections

How to convince  
developers to fix bugs?

- « **Feature:** A bug as described by the marketing department » — (*Apple II Reference Manual*, Apple Computer Inc., Cupertino, 1979, p. 180)

# Bug report format

- Bug title – brief, concise but detailed description of bug
- Environment – hardware/software version
- Bug description – describe the bug in detail
  - Summary of bug
  - Steps to reproduce the bug
- Expected result/actual result: note expected behavior of software as designed and what actually happened that deviates from the specifications
- Percentage of reproduction – how often this bug occurs and can be reproduce with the step by step procedure
- Severity of bug – critical, high, medium, low – could be debatable
- Error messages, logs, screenshots, videos

# Sample bug report

- Video playback - Playlist – next video on the playlist does not play automatically
- Phone: Samsung Galaxy S4
- OS version: Android 4.2.1
- Software version: 1.3
- Functionality: Video/playlist
- Priority: High
- Summary: When playing a video in a playlist, after a video ends, the next video on the list does not start playing automatically. The video window shows a black screen.

# Sample bug report

Steps to reproduce:

1. Create or select an existing playlist with at least 2 videos
2. Select any video that's not the last on the playlist
3. Tap on play button to start playing video
3. Let the video play until it finishes

# Sample bug report

Expected result:

The next video on the playlist begins playing automatically

Actual result:

The video window shows a black screen and the next video on the playlist doesn't start playing automatically

Reproduced 4 out of 4 times (100%).

# Bad bug reports

- “App crashes”
- “Game should work”
- “It slows down my computer”
- “Does not fill up the entire screen”

Vague descriptions are not useful

Always provide steps to reproduce issue so  
developers can investigate

# Tips

- Search database to make sure that the bug is not already reported by other testers
- Title should tell readers right away what's wrong
  - reduce time for everyone
- Provide relevant details and steps so developer or other testers can reproduce the issue
- Be specific
- Keep reports simple
- Proofread and edit reports

# Actual bug report guidelines & reports examples

- [https://developer.mozilla.org/en-US/docs/Mozilla/QA/Bug\\_writing\\_guidelines](https://developer.mozilla.org/en-US/docs/Mozilla/QA/Bug_writing_guidelines)
- <http://www.chromium.org/for-testers/bug-reporting-guidelines>
- <https://issues.apache.org/bugwritinghelp.html>
- <http://www.webkit.org/quality/bugwriting.html>

# Tools

- Video screen captures
  - Wink - [www.debugmode.com/wink](http://www.debugmode.com/wink)
  - Camstudio – [www.camstudio.org](http://www.camstudio.org)
- Screenshots on mobile devices
  - No Root Screenshot It! App - for Android and iPhone phones
  - iPhone and some Android phones have the possibility to do screenshots by using special key combinations

# A little more about mobile testing

What makes testing different?

What additional considerations are there?

# Crucial question in mobile testing

- What devices should we test with?
  - Know your usage statistics
- How to acquire those devices?
  - Buy them
  - Borrow them
  - Be part of developer programs to have access to them
  - Use remote device access
- Can we use and trust emulators?
  - No

# Mobile testers

# Devices and emulators

- Devices and mobile browsers emulators
  - From SDKs and tools for developers
- Remote device access

DeviceAnywhere®  
The #1 Mobile Testing Platform

NOKIA Developer

# Testing mobile apps

- Testing in real situations (mobile user)
- Installation
- Configuration (OS, app permissions, device settings, carrier)
- Connectivity (intermittent, off)
- Security (SSL, login)
- Navigation (rotation, scrolling, filters)
- Mobile interruptions (phone calls, SMS)
- SD and SIM cards (removing, changing)
- Location (on/off)
- Battery and power supplies (low battery, removing battery)
- UI / UX (search, text entry, images, videos, forward/backward, zoom/pinch)
- Outbound situations
  - Extensions of the web site and activities outside of the web site itself (forgotten password, external apps calls such as QR code readers for example)

# Testing a mobile web site

# Mobile Web Best Practices

## 10 ways to mobilize

-  **Design** for One Web
-  **Rely** on Web standards
-  **Stay away** from known hazards
-  **Be cautious** of device limitations
-  **Optimize** navigation
-  **Check** graphics & colors
-  **Keep** it small
-  **Use** the network sparingly
-  **Help & guide** user input
-  **Think** of users on the go

<http://weather.com>

The screenshot shows the weather.com website in a Firefox browser window. The browser's address bar displays "www.weather.com". The website's header includes "The Weather Channel" logo, location cards for "Dakar, Se..." (22°C) and "Shanghai, ..." (10°C), and a search bar with the text "Search Zip, City, or Place (Disney World)". A navigation menu contains links for "Weather", "Lifestyle", "Social", "Maps", "Video", "News", and "TV".

The main content area features a large photograph of a crowd at a Super Bowl event, with a person in the foreground taking a photo. Below the photo is the headline "How Extreme Can This Game Get?" and a link to "More: Can This Manatee Pick the Winner Again? | Super Bowl Ads This Year".

On the right side, there are several advertisement blocks:

- Birst™ | BI Software**: [Birst.com/Free-BI-Comparison-Report](#) 3 Reports Compare BI Platforms and Review Top Vendors and Features. [Tech Jobs on Dice.com](#) [www.Dice.com](#) The Tech Jobs You Want Are Here. Browse Tech Jobs & Apply Online.
- Audio Transcription Svcs**: [www.DailyTranscription.com](#) Accurate Audio-To-Text, Fast Results! Get A Free Quote Now.

A vertical "feedback" button is located on the right edge of the page.

# What do you think?

Try out <http://www.w3.org/2007/12/training/assignments/basicdesign/sample.html> in different browsers.

# ACID Test

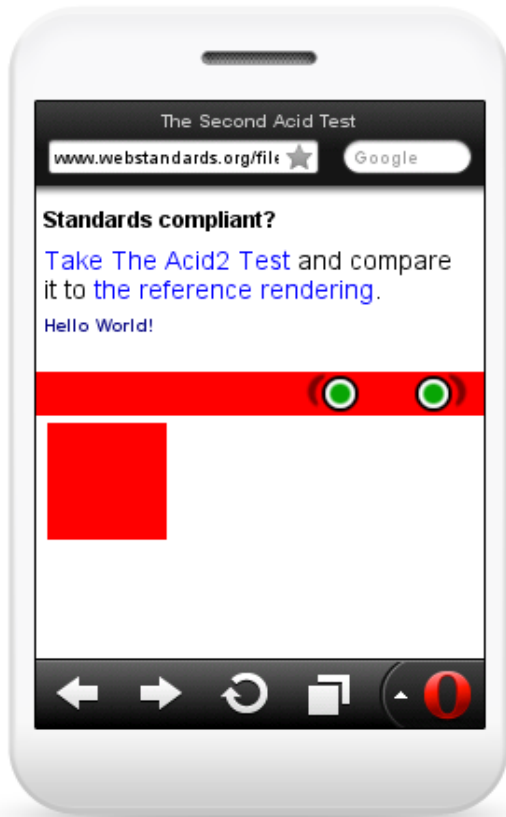

- Test page published and promoted by the Web Standards Project to expose web page rendering flaws in web browsers
- ACID 2
  - <http://www.webstandards.org/files/acid2/test.html#top>
  - HTML markup, CSS 2.1 styling, PNG images, and data URIs
- ACID 3
  - <http://acid3.acidtests.org>
  - DOM and JavaScript

To pass the test, a browser must use its default settings, the animation has to be smooth, the score has to end on 100/100, and the final page has to look exactly pixel for pixel, like [this reference rendering](#)

# CSS support

Opera Mini

Android on Google Nexus

iPod Safari

# Testing mobile web sites

- It is a web site!
- Test in real situations (mobile user, screen rotation...)
- Test with different browsers
- Performance
- Images and videos
- Security (login, SSL)
- HTML pages (lists, tables)
- Redirections
- Outbound operations

# Tools

- W3C Markup Validator <http://validator.w3.org/>
- CSS Validator <http://jigsaw.w3.org/css-validator/>
- Link Checker <http://validator.w3.org/checklink>
- Mobile web performance  
<http://mobitest.akamai.com/m/index.cgi>
- Mobile ready? <http://ready.mobi>
- Google Chrome, Opera and Safari include some tools for developers

# Exercise

- Testing of a news web site
- Describe your strategy to test this mobile web site and 5 problems

### MIME types

★ [help me fix it](#)

#### WARNING FOR THIS TEST

#### Incorrect or missing MIME types were detected

The MIME types sent by servers give very important information to browsers as to how to treat a document. If incorrect MIME types are sent with a document, it may prevent the browser from correctly interpreting the document and failing to render a document.

For XHTML-MP, the recommended MIME type is `application/vnd.wap.xhtml+xml` or `application/xhtml+xml`. Unlike HTML, XHTML-MP should not be served as

# Crowdsourcing testing

- Testing done by a large group of testers recruited from the crowd that are not part of the development team
- Recruit testers globally – useful when a developer needs to test software designed for local audience but lacks resources to hire people on the ground
- Always have large pool of testers available
- Offers fresh perspective
- Get feedback from regular end users
- Covers a large set of devices and operating systems
- Quick turnaround time
- Reduce need to have a full time QA staff

# Crowdsource testing companies

- Examples of crowdsourcing testing companies
  - uTest – [www.utest.com](http://www.utest.com)
  - pay4bugs - [www.pay4bugs.com](http://www.pay4bugs.com)
  - 99test – [99tests.com](http://99tests.com)
  - Ustertesting – [ustertesting.com](http://ustertesting.com)

# uTest

- Business model

- Offer testing services such as functional testing, security testing, load testing, localization testing, usability testing
- Client demands a particular type of testing to be done within a set time period
- People sign up with the company to become a tester – anyone can join
  - Provide hardware and software profile – e.g. computer OS version, iPhone, Nokia, BlackBerry
  - Take a qualification exam
  - If pass, get email notifications on new testing projects

# uTest

- Testers get paid by each bug report or test plan
- Testers are ranked by quality of bug reports they submitted and how they compared to other testers
  - Report quality rated by lead tester or project manager
  - Higher ranking gives tester more projects and better pay

# References

- Thanks to Chun Hei Cheung
