

The IT Governance Institute® is pleased to offer you this complimentary download of COBIT®

COBIT provides good practices for the management of IT processes in a manageable and logical structure, meeting the multiple needs of enterprise management by bridging the gaps between business risks, technical issues, control needs and performance measurement requirements. If you believe as we do, that COBIT enables the development of clear policy and good practices for IT control throughout your organisation, we invite you to support ongoing COBIT research and development.

There are two ways in which you may express your support: (1) Purchase COBIT through the association (ISACA) Bookstore (please see the following pages for order form and association membership application. Association members are able to purchase COBIT at a significant discount); (2) Make a generous donation to the IT Governance Institute, which conducts research and authors COBIT.

The complete COBIT package consists of all six publications, an ASCII text diskette, four COBIT implementation/orientation Microsoft® PowerPoint® presentations and a CD-ROM. A brief overview of each component is provided below. Thank you for your interest in and support of COBIT!

For additional information about the IT Governance Institute, visit www.itgi.org.

Management Guidelines

To ensure a successful enterprise, you must effectively manage the union between business processes and information systems. The new *Management Guidelines* is composed of maturity models, critical success factors, key goal indicators and key performance indicators. These *Management Guidelines* will help answer the questions of immediate concern to all those who have a stake in enterprise success.

Executive Summary

Sound business decisions are based on timely, relevant and concise information. Specifically designed for time-pressed senior executives and managers, the COBIT *Executive Summary* explains COBIT's key concepts and principles.

Framework

A successful organization is built on a solid framework of data and information. The *Framework* explains how IT processes deliver the information that the business needs to achieve its objectives. This delivery is controlled through 34 high-level control objectives, one for each IT process, contained in the four domains. The *Framework* identifies which of the seven information criteria (effectiveness, efficiency, confidentiality, integrity, availability, compliance and reliability), as well as which IT resources (people, applications, technology, facilities and data) are important for the IT processes to fully support the business objective.

Audit Guidelines

Analyze, assess, interpret, react, implement. To achieve your desired goals and objectives you must constantly and consistently audit your procedures. *Audit Guidelines* outlines and suggests actual activities to be performed corresponding to each of the 34 high-level IT control objectives, while substantiating the risk of control objectives not being met.

Control Objectives

The key to maintaining profitability in a technologically changing environment is how well you maintain control. COBIT's *Control Objectives* provides the critical insight needed to delineate a clear policy and good practice for IT controls. Included are the statements of desired results or purposes to be achieved by implementing the 318 specific, detailed control objectives throughout the 34 high-level control objectives.

Implementation Tool Set

The *Implementation Tool Set* contains management awareness and IT control diagnostics, implementation guide, frequently asked questions, case studies from organizations currently using COBIT and slide presentations that can be used to introduce COBIT into organizations. The tool set is designed to facilitate the implementation of COBIT, relate lessons learned from organizations that quickly and successfully applied COBIT in their work environments and assist management in choosing implementation options.

CD-ROM

The CD-ROM, which contains all of COBIT, is published as a Folio infobase. The material is accessed using Folio Views®, which is a high-performance, information retrieval software tool. Access to COBIT's text and graphics is now easier than ever, with flexible keyword searching and built-in index links (optional purchase).

A network version (multi-user) of COBIT 3rd Edition is available. It is compatible with Microsoft Windows NT/2000 and Novell NetWare environments. Contact the ISACA Bookstore for pricing and availability.

See order form, donation information and membership application on the following pages.

By applying for membership in the Information Systems Audit and Control Association, members agree to hold the association and the IT Governance Institute, their officers, directors, agents, trustees, and employees and members, harmless for all acts or failures to act while carrying out the purpose of the association and the institute as set forth in their respective bylaws, and they certify that they will abide by the association's *Code of Professional Ethics* (www.isaca.org/ethics).

Initial payment entitles new members to membership beginning the first day of the month following the date payment is received by International Headquarters through the end of that year. No rebate of dues is available upon early resignation of membership.

Contributions, dues or gifts to the Information Systems Audit and Control Association are not tax deductible as charitable contributions in the United States. However, they may be tax deductible as ordinary and necessary business expenses.

Membership dues allocated to a 1-year subscription to the *IS Control Journal* are as follows: \$45 for US members, \$60 for non-US members. This amount is not deductible from dues.

Make checks payable to:

Information Systems Audit and Control Association

*Call chapter for information

One of the most important assets of an enterprise is its information. The integrity and reliability of that information and the systems that generate it are crucial to an enterprise's success. Faced with complex and correspondingly ingenious cyberthreats, organizations are looking for individuals who have the proven experience and knowledge to identify, evaluate and recommend solutions to mitigate IT system vulnerabilities. ISACA offers two certifications to meet these needs.

Certified Information Systems Auditor (CISA)

The CISA program is designed to assess and certify individuals in the IS audit, control and security profession who demonstrate exceptional skill and judgment.

The CISA examination content areas include:

- The IS audit process
- Management, planning and organization of IS
- Technical infrastructure and operational practices
- Protection of information assets
- Disaster recovery and business continuity
- Business application system development, acquisition, implementation and maintenance
- Business process evaluation and risk management

To earn the CISA designation, candidates are required to:

- Successfully complete the CISA examination
- Adhere to the Information Systems Audit and Control Association (ISACA) Code of Professional Ethics
- Submit verified evidence of a minimum number of years of professional information systems auditing, control or security work experience
- Comply with the CISA continuing education program (after becoming certified)

Certified Information Security Manager (CISM)

CISM is a newly created credential for security managers that provides executive management with the assurance that those certified have the expertise to provide effective security management and consulting. It is business-oriented and focused on information risk management while addressing management, design and technical security issues at a conceptual level.

The CISM credential measures expertise in the areas of:

- Information security governance
- Risk management
- Information security program(me) development
- Information security management
- Response management

To earn the CISM designation, information security professionals are required to:

- Successfully complete the CISM examination
- Adhere to the Information Systems Audit and Control Association (ISACA) Code of Professional Ethics
- Submit verified evidence of a minimum number of years of information security experience, with a number of those years in the job analysis domains
- Comply with the CISM continuing education program (after becoming certified)

A grandfathering opportunity, available through 31 December 2003, allows information security professionals with the necessary experience to apply for certification without taking the CISM exam.

CISA
CERTIFIED INFORMATION SYSTEMS AUDITOR™

CISM
CERTIFIED INFORMATION
SECURITY MANAGER™

Being a CISA or a CISM is more than passing an examination. It demonstrates the commitment, dedication and proficiency required to excel in your profession. These certifications identify their holders as consummate professionals who maintain a competitive advantage among their peers. Earning these designations helps assure a positive reputation and distinguishes you among other candidates seeking positions in both the private and public sectors. As a member of ISACA, you have the opportunity to sit for the exams, purchase review materials and attend ISACA conferences to maintain your certifications at a substantially reduced cost.

For more information on becoming a CISA or a CISM, visit the ISACA web site at www.isaca.org/certification.

INFORMATION SYSTEMS AUDIT AND CONTROL ASSOCIATION

A Single International Source
 for Information Technology Controls

The Information Systems Audit and Control Association is a leading global professional organisation representing individuals in more than 100 countries and comprising all levels of IT — executive, management, middle management and practitioner. The Association is uniquely positioned to fulfil the role of a central, harmonising source of IT control practice standards for the world over. Its strategic alliances with other groups in the financial, accounting, auditing and IT professions are ensuring an unparalleled level of integration and commitment by business process owners.

Association Programmes and Services

The Association's services and programmes have earned distinction by establishing the highest levels of excellence in certification, standards, professional education and technical publishing.

- *Its certification programme (the Certified Information Systems Auditor™) is the only global designation throughout the IT audit and control community.*
- *Its standards activities establish the quality baseline by which other IT audit and control activities are measured.*

- *Its professional education programme offers technical and management conferences on five continents, as well as seminars worldwide to help professionals everywhere receive high-quality continuing education.*
- *Its technical publishing area provides references and professional development materials to augment its distinguished selection of programmes and services.*

The Information Systems Audit and Control Association was formed in 1969 to meet the unique, diverse and high technology needs of the burgeoning IT field. In an industry in which progress is measured in nano-seconds, ISACA has moved with agility and speed to bridge the needs of the international business community and the IT controls profession.

Disclaimer

The Information Systems Audit and Control Foundation, IT Governance Institute and the sponsors of *COBIT: Control Objectives for Information and related Technology* have designed and created the publications entitled *Executive Summary*, *Framework*, *Control Objectives*, *Management Guidelines*, *Audit Guidelines* and *Implementation Tool Set* (collectively, the "Works") primarily as an educational resource for controls professionals. The Information Systems Audit and Control Foundation, IT Governance Institute and the sponsors make no claim that use of any of the Works will assure a successful outcome. The Works should not be considered inclusive of any proper procedures and tests or exclusive of other procedures and tests that are reasonably directed to obtaining the same results. In determining the propriety of any specific procedure or test, the controls professional should apply his or her own professional judgment to the specific control circumstances presented by the particular systems or IT environment.

SPECIAL THANKS to the ISACA Boston and National Capital Area Chapters for their contributions to the COBIT *Control Objectives*.

SPECIAL THANKS to the members of the Board of the Information Systems Audit and Control Association and Trustees of the Information Systems Audit and Control Foundation, headed by International President Paul Williams, for their continuing and unwavering support of COBIT.

EXECUTIVE OVERVIEW

Critically important to the survival and success of an organisation is effective management of information and related Information Technology (IT). In this global information society—where information travels through cyberspace without the constraints of time, distance and speed—this criticality arises from the:

- Increasing dependence on information and the systems that deliver this information
- Increasing vulnerabilities and a wide spectrum of threats, such as cyber threats and information warfare
- Scale and cost of the current and future investments in information and information systems
- Potential for technologies to dramatically change organisations and business practices, create new opportunities and reduce costs

For many organisations, information and the technology that supports it represent the organisation's most valuable assets. Moreover, in today's very competitive and rapidly changing business environment, management has heightened expectations regarding IT delivery functions: management requires increased quality, functionality and ease of use; decreased delivery time; and continuously improving service levels—while demanding that this be accomplished at lower costs.

Many organisations recognise the potential benefits that technology can yield. Successful organisations, however, understand and manage the risks associated with implementing new technologies.

There are numerous changes in IT and its operating environment that emphasise the need to better manage IT-related risks. Dependence on electronic information and IT systems is essential to support critical business processes. In addition, the regulatory environment is mandating stricter control over information. This, in turn, is driven by increasing disclosures of information system disasters and increasing electronic fraud. The management of IT-related risks is now being understood as a key part of enterprise governance.

Within enterprise governance, IT governance is becoming more and more prominent, and is defined as a structure of relationships and processes to direct and control the enterprise in order to achieve the enterprise's goals by adding value while balancing risk versus return over IT and its processes. IT governance is integral to the success of enterprise governance by assuring efficient and effective measurable improvements in related enterprise processes. IT governance provides the structure that links IT processes, IT resources and information to enterprise strategies and objectives. Furthermore, IT governance integrates and institutionalises good (or best) practices of planning and organising,

acquiring and implementing, delivering and supporting, and monitoring IT performance to ensure that the enterprise's information and related technology support its business objectives. IT governance thus enables the enterprise to take full advantage of its information, thereby maximising benefits, capitalising on opportunities and gaining competitive advantage.

IT GOVERNANCE

A structure of relationships and processes to direct and control the enterprise in order to achieve the enterprise's goals by adding value while balancing risk versus return over IT and its processes.

Organisations must satisfy the quality, fiduciary and security requirements for their information, as for all assets. Management must also optimise the use of available resources, including data, application systems, technology, facilities and people. To discharge these responsibilities, as well as to achieve its objectives, management must understand the status of its own IT systems and decide what security and control they should provide.

Control Objectives for Information and related Technology (COBIT), now in its 3rd edition, helps meet the multiple needs of management by bridging the gaps between business risks, control needs and technical issues. It provides good practices across a domain and process framework and presents activities in a manageable and logical structure. COBIT's "good practices" means consensus of the experts—they will help optimise information investments and will provide a measure to be judged against when things do go wrong.

Management must ensure that an internal control system or framework is in place which supports the business processes, makes it clear how each individual control activity satisfies the information requirements and impacts the IT resources. Impact on IT resources is highlighted in the COBIT *Framework* together with the business requirements for effectiveness, efficiency, confidentiality, integrity, availability, compliance and reliability of information that need to be satisfied. Control, which includes policies, organisational structures, practices and procedures, is management's responsibility. Management, through its enterprise governance, must ensure that due diligence is exercised by all individuals involved in the management, use, design, development, maintenance or operation of information systems. An IT control objective is a statement of the desired result or purpose to be achieved by implementing control procedures within a particular IT activity.

Business orientation is the main theme of COBIT. It is designed to be employed not only by users and auditors, but also, and more importantly, as comprehensive guidance for management and business process owners. Increasingly, business practice involves the full empowerment of business process owners so they have total responsibility for all aspects of the business process. In particular, this includes providing adequate controls.

The COBIT *Framework* provides a tool for the business process owner that facilitates the discharge of this responsibility. The *Framework* starts from a simple and pragmatic premise:

In order to provide the information that the organisation needs to achieve its objectives, IT resources need to be managed by a set of naturally grouped processes.

The *Framework* continues with a set of 34 high-level *Control Objectives*, one for each of the IT processes, grouped into four domains: planning and organisation, acquisition and implementation, delivery and support, and monitoring. This structure covers all aspects of information and the technology that supports it. By addressing these 34 high-level control objectives, the business process owner can ensure that an adequate control system is provided for the IT environment.

IT governance guidance is also provided in the COBIT *Framework*. IT governance provides the structure that links IT processes, IT resources and information to enterprise strategies and objectives. IT governance integrates optimal ways of planning and organising, acquiring and implementing, delivering and supporting, and monitoring IT performance. IT governance enables the enterprise to take full advantage of its information, thereby maximising benefits, capitalising on opportunities and gaining competitive advantage.

In addition, corresponding to each of the 34 high-level control objectives is an *Audit Guideline* to enable the review of IT processes against COBIT's 318 recommended detailed control objectives to provide management assurance and/or advice for improvement.

The *Management Guidelines*, COBIT's most recent development, further enhances and enables enterprise management to deal more effectively with the needs and requirements of IT governance. The guidelines are action oriented and generic and provide management direction for getting the enterprise's information and related processes under control, for monitoring achievement of organisational goals, for monitoring performance within each IT process and for benchmarking organisational achievement.

Specifically, COBIT provides **Maturity Models** for control over IT processes, so that management can map where the organisation is today, where it stands in relation to the best-in-class in its industry and to international standards and where the organisation wants to be; **Critical Success Factors**, which define the most important management-oriented implementation guidelines to achieve control over and within its IT processes; **Key Goal Indicators**, which define measures that tell management—after the fact—whether an IT process has achieved its business requirements; and **Key Performance Indicators**, which are lead indicators that define measures of how well the IT process is performing in enabling the goal to be reached.

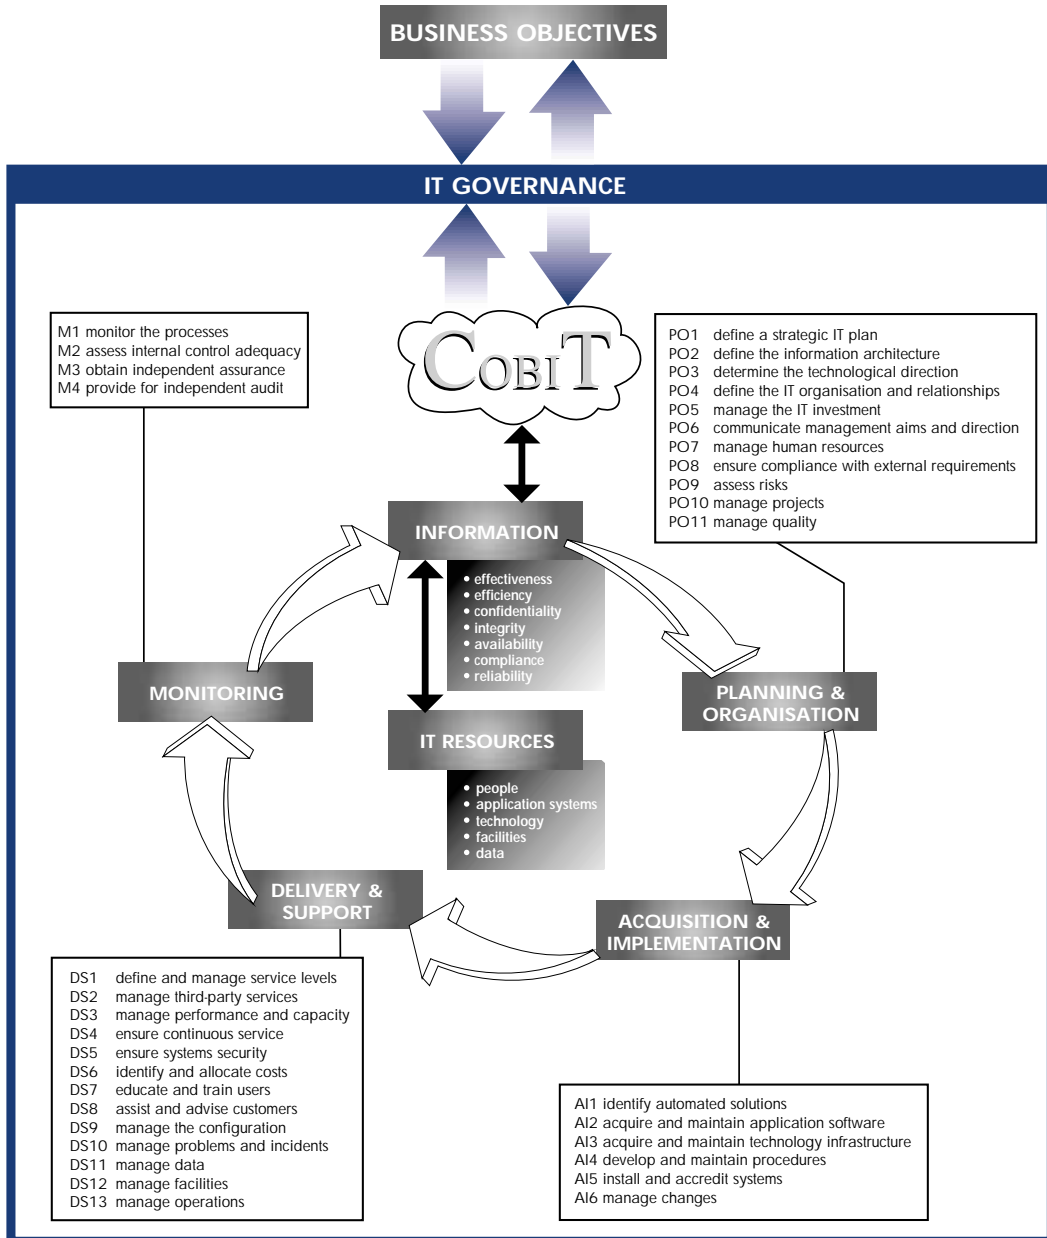

COBIT's *Management Guidelines* are generic and action oriented for the purpose of answering the following types of management questions: How far should we go, and is the cost justified by the benefit? What are the indicators of good performance? What are the critical success factors? What are the risks of not achieving our objectives? What do others do? How do we measure and compare?

COBIT also contains an *Implementation Tool Set* that provides lessons learned from those organisations that quickly and successfully applied COBIT in their work environments. It has two particularly useful tools—Management Awareness Diagnostic and IT Control Diagnostic—to assist in analysing an organisation's IT control environment.

Over the next few years, the management of organisations will need to demonstrably attain increased levels of security and control. COBIT is a tool that allows managers to bridge the gap with respect to control requirements, technical issues and business risks and communicate that level of control to stakeholders. COBIT enables the development of clear policy and good practice for IT control throughout organisations, worldwide. **Thus, COBIT is designed to be the breakthrough IT governance tool that helps in understanding and managing the risks and benefits associated with information and related IT.**

CONTROL OBJECTIVES

COBIT IT PROCESSES DEFINED WITHIN THE FOUR DOMAINS

THE COBIT FRAMEWORK

THE NEED FOR CONTROL IN INFORMATION TECHNOLOGY

In recent years, it has become increasingly evident that there is a need for a reference framework for security and control in IT. Successful organisations require an appreciation for and a basic understanding of the risks and constraints of IT at all levels within the enterprise in order to achieve effective direction and adequate controls.

MANAGEMENT has to decide what to reasonably invest for security and control in IT and how to balance risk and control investment in an often unpredictable IT environment. While information systems security and control help manage risks, they do not eliminate them. In addition, the exact level of risk can never be known since there is always some degree of uncertainty. Ultimately, management must decide on the level of risk it is willing to accept. Judging what level can be tolerated, particularly when weighted against the cost, can be a difficult management decision. Therefore, management clearly needs a framework of generally accepted IT security and control practices to benchmark the existing and planned IT environment.

There is an increasing need for **USERS** of IT services to be assured, through accreditation and audit of IT services provided by internal or third parties, that adequate security and control exists. At present, however, the implementation of good IT controls in information systems, be they commercial, non-profit or governmental, is hampered by confusion. The confusion arises from the different evaluation methods such as ITSEC, TCSEC, ISO 9000 evaluations, emerging COSO internal control evaluations, etc. As a result, users need a general foundation to be established as a first step.

Frequently, **AUDITORS** have taken the lead in such international standardisation efforts because they are continuously confronted with the need to substantiate their opinion on internal control to management. Without a framework, this is an exceedingly difficult task. Furthermore, auditors are increasingly being called on by management to proactively consult and advise on IT security and control-related matters.

THE BUSINESS ENVIRONMENT: COMPETITION, CHANGE AND COST

Global competition is here. Organisations are restructuring to streamline operations and simultaneously take advantage of the advances in IT to improve their competitive position. Business re-engineering, right-sizing, outsourcing, empowerment, flattened organisations and distributed processing are all changes that impact the way that business and governmental organisations operate. These changes are having, and will continue to have, profound implications for the management and operational control structures within organisations worldwide.

Emphasis on attaining competitive advantage and cost-efficiency implies an ever-increasing reliance on technology as a major component in the strategy of most organisations. Automating organisational functions is, by its very nature, dictating the incorporation of more powerful control mechanisms into computers and networks, both hardware-based and software-based. Furthermore, the fundamental structural characteristics of these controls are evolving at the same rate and in the same “leap frog” manner as the underlying computing and networking technologies are evolving.

Within the framework of accelerated change, if managers, information systems specialists and auditors are indeed going to be able to effectively fulfil their roles, their skills must evolve as rapidly as the technology and the environment. One must understand the technology of controls involved and its changing nature if one is to exercise reasonable and prudent judgments in evaluating control practices found in typical business or governmental organisations.

EMERGENCE OF ENTERPRISE AND IT GOVERNANCE

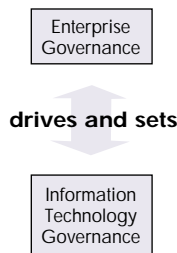

To achieve success in this information economy, enterprise governance and IT governance can no longer be considered separate and distinct disciplines. Effective enterprise governance focuses individual and group expertise and experience where it can be most productive, monitors and measures performance and provides assurance to critical issues. IT, long considered solely an

CONTROL OBJECTIVES

enabler of an enterprise's strategy, must now be regarded as an integral part of that strategy.

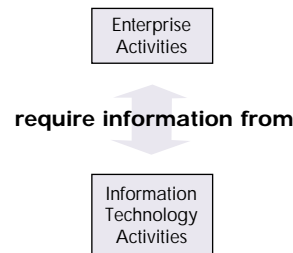

IT governance provides the structure that links IT processes, IT resources, and information to enterprise strategies and objectives. IT governance integrates and institutionalises optimal ways of planning and organising, acquiring and implementing, delivering and supporting, and monitoring IT performance. IT governance is integral to the success of enterprise governance by assuring efficient and effective measurable improvements in related enterprise processes. IT governance enables the enterprise to take full advantage of its information, thereby maximising benefits, capitalising on opportunities and gaining competitive advantage.

Looking at the interplay of enterprise and IT governance processes in more detail, enterprise governance, the system by which entities are directed and controlled, drives and sets IT governance. At the same time, IT should provide critical input to, and constitute an important component of, strategic plans. IT may in fact influence strategic opportunities outlined by the enterprise.

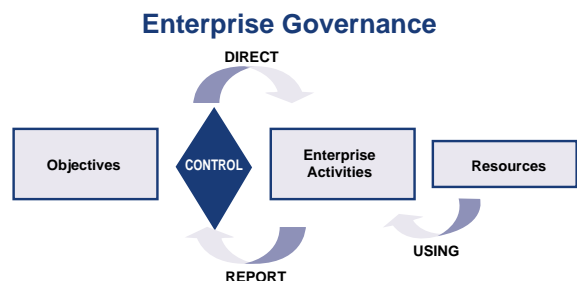

Enterprise activities require information from IT activities in order to meet business objectives. Successful organisations ensure interdependence between their strategic planning and their IT activities. IT must be

aligned with and enable the enterprise to take full advantage of its information, thereby maximising benefits, capitalising on opportunities and gaining a competitive advantage.

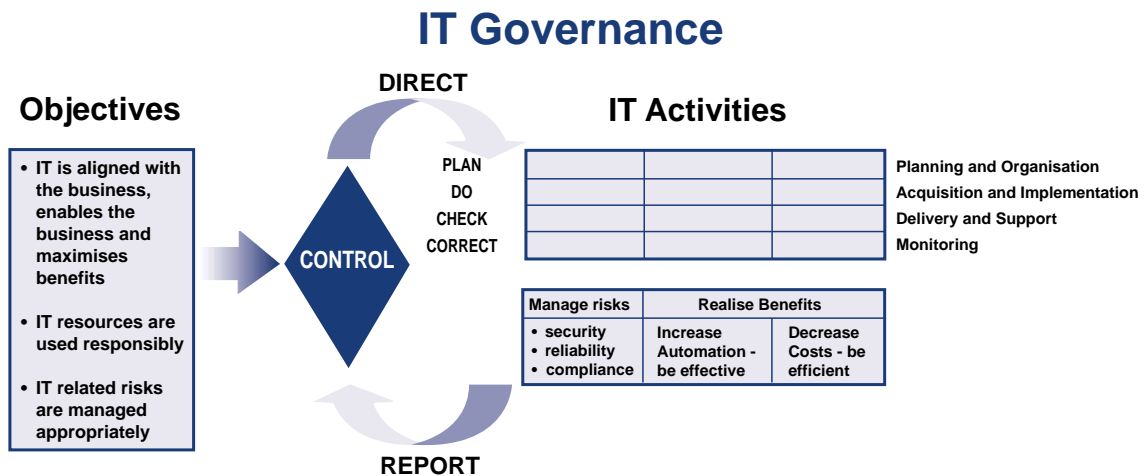

Enterprises are governed by generally accepted good (or best) practices, to ensure that the enterprise is achieving its goals-the assurance of which is guaranteed by certain controls. From these objectives flows the organisation's direction, which dictates certain enterprise activities, using the enterprise's resources. The results of the enterprise activities are measured and reported on, providing input to the constant revision and maintenance of the controls, beginning the cycle again.

THE COBIT FRAMEWORK, *continued*

IT also is governed by good (or best) practices, to ensure that the enterprise's information and related technology support its business objectives, its resources are used responsibly and its risks are managed appropriately. These practices form a basis for direction of IT activities, which can be characterised as planning and organising, acquiring and implementing, delivering and sup-

porting, and monitoring, for the dual purposes of managing risks (to gain security, reliability and compliance) and realising benefits (increasing effectiveness and efficiency). Reports are issued on the outcomes of IT activities, which are measured against the various practices and controls, and the cycle begins again.

In order to ensure that management reaches its business objectives, it must direct and manage IT activities to reach an effective balance between managing risks and realising benefits. To accomplish this, management needs to identify the most important activities to be performed, measure progress towards achieving goals and determine how well the IT processes are performing. In addition, it needs the ability to evaluate the organisation's maturity level against industry best practices and international standards. **To support these management needs, the COBIT Management Guidelines have identified specific Critical Success Factors, Key Goal Indicators, Key Performance Indicators and an associated Maturity Model for IT governance, as presented in Appendix I.**

CONTROL OBJECTIVES

RESPONSE TO THE NEED

In view of these ongoing changes, the development of this framework for control objectives for IT, along with continued applied research in IT controls based on this framework, are cornerstones for effective progress in the field of information and related technology controls.

On the one hand, we have witnessed the development and publication of overall business control models like COSO (Committee of Sponsoring Organisations of the Treadway Commission—Internal Control—*Integrated Framework*, 1992) in the US, Cadbury in the UK, CoCo in Canada and King in South Africa. On the other hand, an important number of more focused control models are in existence at the level of IT. Good examples of the latter category are the Security Code of Conduct from DTI (Department of Trade and Industry, UK), Information Technology Control Guidelines from CICA (Canadian Institute of Chartered Accountants, Canada), and the Security Handbook from NIST (National Institute of Standards and Technology, US). However, these focused control models do not provide a comprehensive and usable control model over IT in support of business processes. The purpose of COBIT is to bridge this gap by providing a foundation that is closely linked to business objectives while focusing on IT.

(Most closely related to COBIT is the recently published *AICPA/CICA SysTrust™ Principles and Criteria for Systems Reliability*. SysTrust is an authoritative issuance of both the Assurance Services Executive Committee in the United States and the Assurance Services Development Board in Canada, based in part on the COBIT *Control Objectives*. SysTrust is designed to increase the comfort of management, customers and business partners with the systems that support a business or a particular activity. The SysTrust service entails the public accountant providing an assurance service in which he or she evaluates and tests whether a system is reliable when measured against four essential principles: availability, security, integrity and maintainability.)

A focus on the business requirements for controls in IT and the application of emerging control models and

related international standards evolved the original Information Systems Audit and Control Foundation's *Control Objectives* from an auditor's tool to COBIT, a management tool. Further, the development of IT *Management Guidelines* has taken COBIT to the next level—providing management with Key Goal Indicators (KGIs), Key Performance Indicators (KPIs), Critical Success Factors (CSFs) and Maturity Models so that it can assess its IT environment and make choices for control implementation and control improvements over the organisation's information and related technology.

Hence, the main objective of the COBIT project is the development of clear policies and good practices for security and control in IT for worldwide endorsement by commercial, governmental and professional organisations. It is the goal of the project to develop these control objectives primarily from the business objectives and needs perspective. (This is compliant with the COSO perspective, which is first and foremost a management framework for internal controls.) Subsequently, control objectives have been developed from the audit objectives (certification of financial information, certification of internal control measures, efficiency and effectiveness, etc.) perspective.

AUDIENCE: MANAGEMENT, USERS AND AUDITORS

COBIT is designed to be used by three distinct audiences.

MANAGEMENT:

to help them balance risk and control investment in an often unpredictable IT environment.

USERS:

to obtain assurance on the security and controls of IT services provided by internal or third parties.

AUDITORS:

to substantiate their opinions and/or provide advice to management on internal controls.

THE COBIT FRAMEWORK, *continued*

BUSINESS OBJECTIVES ORIENTATION

COBIT is aimed at addressing business objectives. The control objectives make a clear and distinct link to business objectives in order to support significant use outside the audit community. Control objectives are defined in a process-oriented manner following the principle of business re-engineering. At identified domains and processes, a high-level control objective is identified and rationale provided to document the link to the business objectives. In addition, considerations and guidelines are provided to define and implement the IT control objective.

The classification of domains where high-level control objectives apply (domains and processes), an indication of the business requirements for information in that domain, as well as the IT resources primarily impacted by the control objectives, together form the COBIT *Framework*. The *Framework* is based on the research activities that have identified 34 high-level control objectives and 318 detailed control objectives. The *Framework* was exposed to the IT industry and the audit profession to allow an opportunity for review, challenge and comment. The insights gained have been appropriately incorporated.

GENERAL DEFINITIONS

For the purpose of this project, the following definitions are provided. “Control” is adapted from the COSO Report (*Internal Control—Integrated Framework*, Committee of Sponsoring Organisations of the Treadway Commission, 1992) and “IT Control Objective” is adapted from the SAC Report (*Systems Auditability and Control Report*, The Institute of Internal Auditors Research Foundation, 1991 and 1994).

Control is defined as

the policies, procedures, practices and organisational structures designed to provide reasonable assurance that business objectives will be achieved and that undesired events will be prevented or detected and corrected.

IT Control Objective is defined as

a statement of the desired result or purpose to be achieved by implementing control procedures in a particular IT activity.

IT Governance is defined as

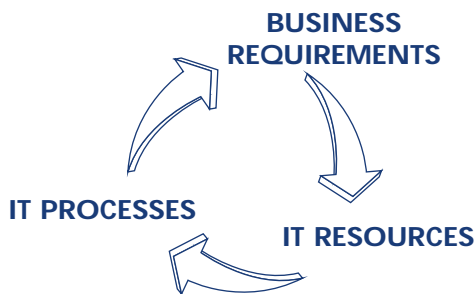

a structure of relationships and processes to direct and control the enterprise in order to achieve the enterprise’s goals by adding value while balancing risk versus return over IT and its processes.

CONTROL OBJECTIVES

THE FRAMEWORK'S PRINCIPLES

There are two distinct classes of control models currently available: those of the “business control model” class (e.g., COSO) and the “more focused control models for IT” (e.g., DTI). COBIT aims to bridge the gap that exists between the two. COBIT is therefore positioned to be more comprehensive for management and to operate at a higher level than technology standards for information systems management. **Thus, COBIT is the model for IT governance!**

The underpinning concept of the COBIT *Framework* is that control in IT is approached by looking at information that is needed to support the business objectives or requirements, and by looking at information as being the result of the combined application of IT-related resources that need to be managed by IT processes.

To satisfy business objectives, information needs to conform to certain criteria, which COBIT refers to as business requirements for information. In establishing the list of requirements, COBIT combines the principles embedded in existing and known reference models:

Quality Requirements	Quality Cost Delivery
Fiduciary Requirements (COSO Report)	Effectiveness and Efficiency of operations Reliability of Information Compliance with laws and regulations
Security Requirements	Confidentiality Integrity Availability

Quality has been retained primarily for its negative aspect (no faults, reliability, etc.), which is also captured to a large extent by the Integrity criterion. The positive but less tangible aspects of Quality (style, attractiveness, “look and feel,” performing beyond expectations, etc.) were, for a time, not being considered from an IT control objectives point of view. The premise is that the first priority should go to properly managing the risks as opposed to the opportunities. The usability aspect of Quality is covered by the Effectiveness criterion. The Delivery aspect of Quality was considered to overlap with the Availability aspect of the Security requirements and also to some extent Effectiveness and Efficiency. Finally, Cost is also considered covered by Efficiency.

For the Fiduciary Requirements, COBIT did not attempt to reinvent the wheel—COSO’s definitions for Effectiveness and Efficiency of operations, Reliability of Information and Compliance with laws and regulations were used. However, Reliability of Information was expanded to include all information—not just financial information.

With respect to the Security Requirements, COBIT identified Confidentiality, Integrity, and Availability as the key elements—these same three elements, it was found, are used worldwide in describing IT security requirements.

THE FRAMEWORK'S PRINCIPLES, *continued*

Starting the analysis from the broader Quality, Fiduciary and Security requirements, seven distinct, certainly overlapping, categories were extracted. COBIT's working definitions are as follows:

Effectiveness	deals with information being relevant and pertinent to the business process as well as being delivered in a timely, correct, consistent and usable manner.
Efficiency	concerns the provision of information through the optimal (most productive and economical) use of resources.
Confidentiality	concerns the protection of sensitive information from unauthorised disclosure.
Integrity	relates to the accuracy and completeness of information as well as to its validity in accordance with business values and expectations.
Availability	relates to information being available when required by the business process now and in the future. It also concerns the safeguarding of necessary resources and associated capabilities.
Compliance	deals with complying with those laws, regulations and contractual arrangements to which the business process is subject, i.e., externally imposed business criteria.
Reliability of Information	relates to the provision of appropriate information for management to operate the entity and for management to exercise its financial and compliance reporting responsibilities.

The IT resources identified in COBIT can be explained/defined as follows:

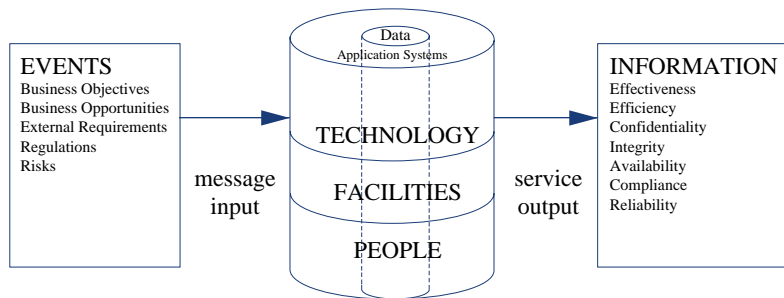

Data	are objects in their widest sense (i.e., external and internal), structured and non-structured, graphics, sound, etc.
Application Systems	are understood to be the sum of manual and programmed procedures.
Technology	covers hardware, operating systems, database management systems, networking, multimedia, etc.
Facilities	are all the resources to house and support information systems.
People	include staff skills, awareness and productivity to plan, organise, acquire, deliver, support and monitor information systems and services.

CONTROL OBJECTIVES

Money or capital was not retained as an IT resource for classification of control objectives because it can be considered as being the investment into any of the above resources. It should also be noted that the *Framework* does not specifically refer to documentation of all material matters relating to a particular IT process. As a matter of good practice, documentation is considered essen-

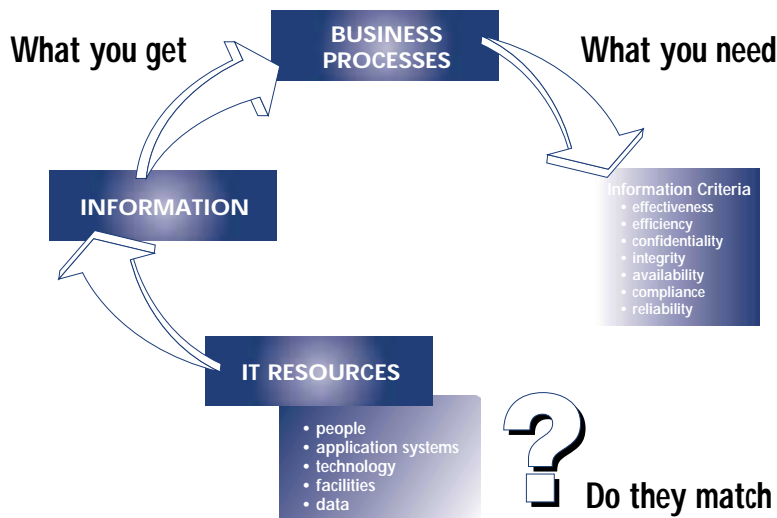

tial for good control, and therefore lack of documentation would be cause for further review and analysis for compensating controls in any specific area under review.

Another way of looking at the relationship of IT resources to the delivery of services is depicted below.

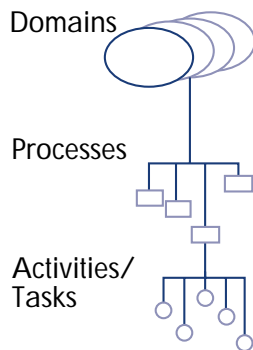

In order to ensure that the business requirements for information are met, adequate control measures need to be defined, implemented and monitored over these resources. How then can organisations satisfy them-

selves that the information they get exhibits the characteristics they need? This is where a sound framework of IT control objectives is required. The next diagram illustrates this concept.

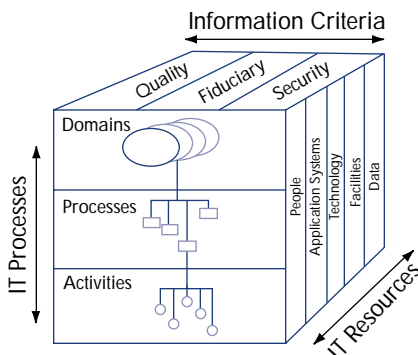

THE FRAMEWORK'S PRINCIPLES, *continued*

The COBIT *Framework* consists of high-level control objectives and an overall structure for their classification. The underlying theory for the classification is that there are, in essence, three levels of IT efforts when considering the management of IT resources. Starting at the bottom, there are the activities and tasks needed to achieve a measurable result. Activities have a life-cycle concept while tasks are more discrete. The life-cycle concept has typical control requirements different from discrete activities. Processes are then defined one layer up as a series of joined activities or tasks with natural (control) breaks. At the highest level, processes are naturally grouped together into domains. Their natural grouping is often confirmed as responsibility domains in an organisational structure and is in line with the management cycle or life cycle applicable to IT processes.

Thus, the conceptual framework can be approached from three vantage points: (1) information criteria, (2) IT resources and (3) IT processes. These three vantage points are depicted in the COBIT Cube.

With the preceding as the framework, the domains are identified using wording that management would use in the day-to-day activities of the organisation—not auditor jargon. Thus, four broad domains are identified: planning and organisation, acquisition and implementation, delivery and support, and monitoring.

Definitions for the four domains identified for the high-level classification are:

Planning and Organisation

This domain covers strategy and tactics, and concerns the identification of the way IT can best contribute to the achievement of the business objectives. Furthermore, the realisation of the strategic vision needs to be planned, communicated and managed for different perspectives. Finally, a proper organisation as well as technological infrastructure must be put in place.

Acquisition and Implementation

To realise the IT strategy, IT solutions need to be identified, developed or acquired, as well as implemented and integrated into the business process. In addition, changes in and maintenance of existing systems are covered by this domain to make sure that the life cycle is continued for these systems.

Delivery and Support

This domain is concerned with the actual delivery of required services, which range from traditional operations over security and continuity aspects to training. In order to deliver services, the necessary support processes must be set up.

This domain includes the actual processing of data by application systems, often classified under application controls.

CONTROL OBJECTIVES

Monitoring

All IT processes need to be regularly assessed over time for their quality and compliance with control requirements. This domain thus addresses management's oversight of the organisation's control process and independent assurance provided by internal and external audit or obtained from alternative sources.

It should be noted that these IT processes can be applied at different levels within an organisation. For example, some of these processes will be applied at the enterprise level, others at the IT function level, others at the business process owner level, etc.

It should also be noted that the Effectiveness criterion of processes that plan or deliver solutions for business requirements will sometimes cover the criteria for Availability, Integrity and Confidentiality—in practice, they have become business requirements. For example, the process of “identify solutions” has to be effective in providing the Availability, Integrity and Confidentiality requirements.

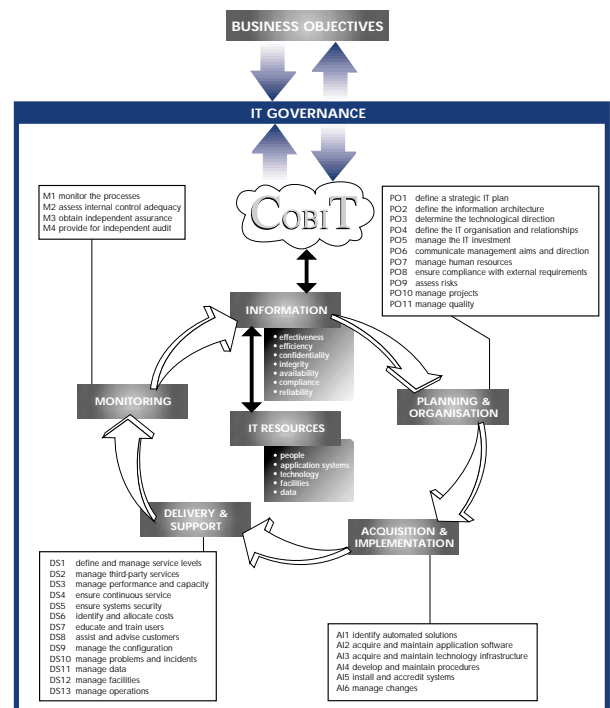

It is clear that all control measures will not necessarily satisfy the different business requirements for information to the same degree.

- **Primary** is the degree to which the defined control objective directly impacts the information criterion concerned.
- **Secondary** is the degree to which the defined control objective satisfies only to a lesser extent or indirectly the information criterion concerned.
- **Blank** could be applicable; however, requirements are more appropriately satisfied by another criterion in this process and/or by another process.

Similarly, all control measures will not necessarily impact the different IT resources to the same degree. Therefore, the COBIT *Framework* specifically indicates the applicability of the IT resources that are specifically managed by the process under consideration (not those that merely take part in the process). This classification is made within the COBIT *Framework* based on a rigorous process of input from researchers, experts and reviewers, using the strict definitions previously indicated.

In summary, in order to provide the information that the organisation needs to achieve its objectives, IT governance must be exercised by the organisation to ensure that IT resources are managed by a set of naturally grouped IT processes. The following diagram illustrates this concept.

COBIT IT PROCESSES DEFINED WITHIN THE FOUR DOMAINS

COBIT HISTORY AND BACKGROUND

COBIT 3rd Edition is the most recent version of Control Objectives for Information and related Technology, first released by the Information Systems Audit and Control Foundation (ISACF) in 1996. The 2nd edition, reflecting an increase in the number of source documents, a revision in the high-level and detailed control objectives and the addition of the *Implementation Tool Set*, was published in 1998. The 3rd edition marks the entry of a new primary publisher for COBIT: the IT Governance Institute.

The IT Governance Institute was formed by the Information System Audit and Control Association (ISACA) and its related Foundation in 1998 in order to advance the understanding and adoption of IT governance principles. Due to the addition of the Management Guidelines to COBIT 3rd Edition and its expanded and enhanced focus on IT governance, the IT Governance Institute took a leading role in the publication's development.

COBIT was originally based on ISACF's *Control Objectives*, and has been enhanced with existing and emerging international technical, professional, regulatory and industry-specific standards. The resulting control objectives have been developed for application to organisation-wide information systems. The term "generally applicable and accepted" is explicitly used in the same sense as Generally Accepted Accounting Principles (GAAP).

COBIT is relatively small in size and attempts to be both pragmatic and responsive to business needs while being independent of the technical IT platforms adopted in an organisation.

While not excluding any other accepted standard in the information systems control field that may have come to light during the research, sources identified are:

Technical standards from ISO, EDIFACT, etc.

Codes of Conduct issued by the Council of Europe, OECD, ISACA, etc.

Qualification criteria for IT systems and processes: ITSEC, TCSEC, ISO 9000, SPICE, TickIT, Common Criteria, etc.

Professional standards for internal control and auditing: COSO, IFAC, AICPA, CICA, ISACA, IIA, PCIE, GAO, etc.

Industry practices and requirements from industry forums (ESF, I4) and government-sponsored platforms (IBAG, NIST, DTI), etc., and

Emerging industry-specific requirements from banking, electronic commerce, and IT manufacturing.

Refer to Appendix II, COBIT Project Description; Appendix III, COBIT Primary Reference Material; and Appendix IV, Glossary of Terms.

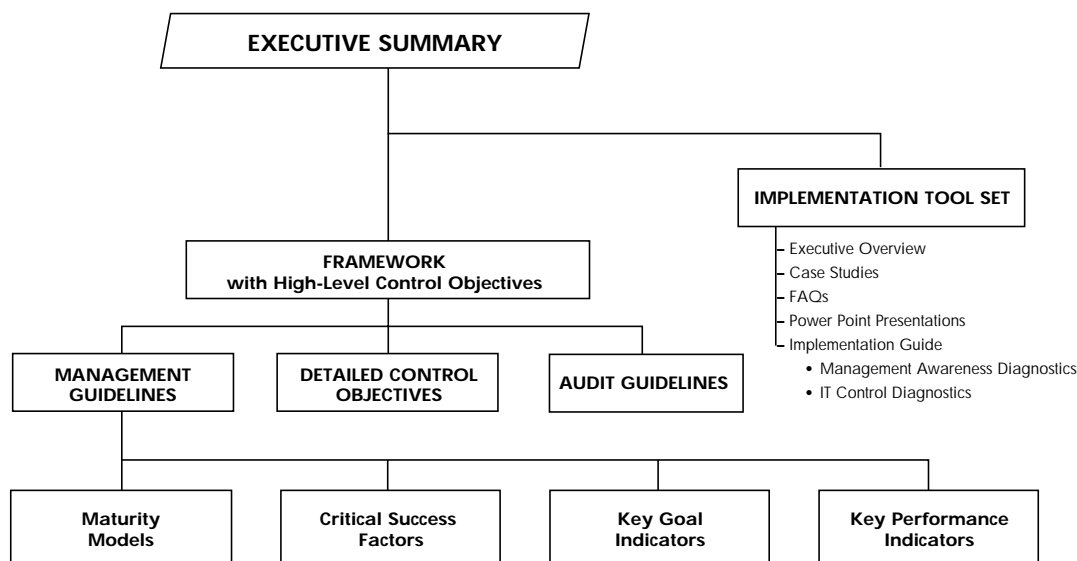

CONTROL OBJECTIVES

COBIT PRODUCT EVOLUTION

COBIT will evolve over the years and be the foundation for further research. Thus, a family of COBIT products will be created and, as this occurs, the IT tasks and activities that serve as the structure to organise control objectives will be further refined, and the balance between domains and processes reviewed in light of the industry's changing landscape.

Research and publication have been made possible by significant grants from PricewaterhouseCoopers and donations from ISACA chapters and members worldwide. The European Security Forum (ESF) kindly made research material available to the project. The Gartner Group also participated in the development and provided quality assurance review of the *Management Guidelines*.

COBIT Family of Products

CONTROL OBJECTIVES SUMMARY TABLE

The following chart provides an indication, by IT process and domain, of which information criteria are

impacted by the high-level control objectives, as well as an indication of which IT resources are applicable.

DOMAIN	PROCESS	Information Criteria							IT Resources				
		effectiveness	efficiency	confidentiality	integrity	availability	compliance	reliability	people	applications	technology	facilities	data
Planning & Organisation	PO1 Define a strategic IT plan	P	S						✓	✓	✓	✓	✓
	PO2 Define the information architecture	P	S	S	S					✓			✓
	PO3 Determine technological direction	P	S								✓	✓

THE CONTROL OBJECTIVES' PRINCIPLES

COBIT, as embodied in this latest version of its *Control Objectives*, reflects the ongoing commitment of ISACA to enhance and maintain the common body of knowledge required to sustain the information systems audit and control profession.

The COBIT *Framework* has been limited to high-level control objectives in the form of a business need within a particular IT process, the achievement of which is enabled by a control statement, for which consideration should be given to potentially applicable controls.

The control objectives have been organised by process/activity, but navigation aids have been provided not only to facilitate entry from any one vantage point, but also to facilitate combined or global approaches, such as installation/implementation of a process, global management responsibilities for a process and the use of IT resources by a process.

It should also be noted that the control objectives have been defined in a generic way; i.e., not depending on the technical platform, while accepting the

fact that some special technology environments may need separate coverage for control objectives.

Whereas the COBIT *Framework* focuses on **high-level controls** for each process, *Control Objectives* focuses on **specific, detailed control objectives** associated with each IT process. For each of the 34 IT processes of the *Framework*, there are from three to 30 detailed control objectives, for a total of 318.

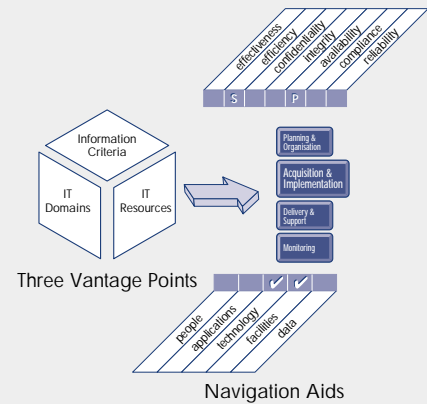

Control Objectives aligns the overall *Framework* with detailed control objectives from 41 primary sources comprising the *de facto* and *de jure* international standards and regulations relating to IT. It contains statements of the desired results or purposes to be achieved by implementing specific control procedures within an IT activity and, thereby, provides a clear policy and good practice for IT control throughout the industry, worldwide.

Control Objectives is directed to the management and staff of the IT, control and audit functions—and, most importantly, to the business process owners. *Control Objectives* provides a working, desktop document for these individuals. Precise and clear definitions of a minimum set of controls to ensure effectiveness, efficiency and economy of resource utilisation are identified. For each process, detailed control objectives are identified as the minimum controls needed to be in place—those controls that will be assessed for sufficiency by the controls professional. *Control Objectives* allows the translation of concepts presented in the *Framework* into specific controls applicable for each IT process.

CONTROL OBJECTIVES NAVIGATION OVERVIEW

The Control Objectives section contains detailed control objectives for each of the 34 IT processes. On the left page is the high-level control objective. The domain indicator (“PO” for Planning & Organisation, “AI” for Acquisition & Implementation, “DS” for Delivery & Support and “M” for Monitoring) is shown at top left. The applicable information criteria and IT resources managed are shown via mini-matrix, as described below. Beginning on the right page, are the descriptions of the detailed control objectives for the IT process.

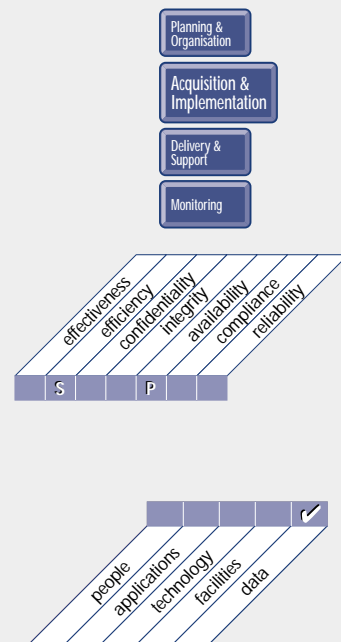

To facilitate efficient use of the control objectives in support of the different vantage points, some navigation aids are provided as part of the presentation of the high-level control objectives. For each of the three dimensions along which the COBIT *Framework* can be approached—processes, IT resources and information criteria—a navigation aid is provided.

IT domains are identified by this icon in the UPPER RIGHT CORNER of each page in the Control Objectives section, with the domain under review highlighted and enlarged.

The cue to information criteria will be provided in the UPPER LEFT CORNER in the Control Objectives section by means of this mini-matrix, which will identify which criteria are applicable to each high-level control objective and to which degree (primary or secondary).

A second mini-matrix in the LOWER RIGHT CORNER in the Control Objectives section identifies the IT resources that are specifically managed by the process under consideration—not those that merely take part in the process. For example, the “manage data” process concentrates particularly on Integrity and Reliability of the data resource.

CONTROL OBJECTIVE RELATIONSHIPS DOMAINS, PROCESSES AND CONTROL OBJECTIVES

PLANNING & ORGANISATION

1.0 Define a Strategic IT Plan

- 1.1 IT as Part of the Organisation's Long- and Short-Range Plan
- 1.2 IT Long-Range Plan
- 1.3 IT Long-Range Planning—Approach and Structure
- 1.4 IT Long-Range Plan Changes
- 1.5 Short-Range Planning for the IT Function
- 1.6 Communication of IT Plans
- 1.7 Monitoring and Evaluating of IT Plans
- 1.8 Assessment of Existing Systems

2.0 Define the Information Architecture

- 2.1 Information Architecture Model
- 2.2 Corporate Data Dictionary and Data Syntax Rules
- 2.3 Data Classification Scheme
- 2.4 Security Levels

3.0 Determine Technological Direction

- 3.1 Technological Infrastructure Planning
- 3.2 Monitor Future Trends and Regulations
- 3.3 Technological Infrastructure Contingency
- 3.4 Hardware and Software Acquisition Plans
- 3.5 Technology Standards

4.0 Define the IT Organisation and Relationships

- 4.1 IT Planning or Steering Committee
- 4.2 Organisational Placement of the IT Function
- 4.3 Review of Organisational Achievements
- 4.4 Roles and Responsibilities
- 4.5 Responsibility for Quality Assurance
- 4.6 Responsibility for Logical and Physical Security
- 4.7 Ownership and Custodianship
- 4.8 Data and System Ownership
- 4.9 Supervision
- 4.10 Segregation of Duties
- 4.11 IT Staffing
- 4.12 Job or Position Descriptions for IT Staff
- 4.13 Key IT Personnel

- 4.14 Contracted Staff Policies and Procedures

- 4.15 Relationships

5.0 Manage the IT Investment

- 5.1 Annual IT Operating Budget
- 5.2 Cost and Benefit Monitoring
- 5.3 Cost and Benefit Justification

6.0 Communicate Management Aims and Direction

- 6.1 Positive Information Control Environment
- 6.2 Management's Responsibility for Policies
- 6.3 Communication of Organisation Policies
- 6.4 Policy Implementation Resources
- 6.5 Maintenance of Policies
- 6.6 Compliance with Policies, Procedures and Standards
- 6.7 Quality Commitment
- 6.8 Security and Internal Control Framework Policy
- 6.9 Intellectual Property Rights
- 6.10 Issue-Specific Policies
- 6.11 Communication of IT Security Awareness

7.0 Manage Human Resources

- 7.1 Personnel Recruitment and Promotion
- 7.2 Personnel Qualifications
- 7.3 Roles and Responsibilities
- 7.4 Personnel Training
- 7.5 Cross-Training or Staff Back-up
- 7.6 Personnel Clearance Procedures
- 7.7 Employee Job Performance Evaluation
- 7.8 Job Change and Termination

8.0 Ensure Compliance with External Requirements

- 8.1 External Requirements Review
- 8.2 Practices and Procedures for Complying with External Requirements
- 8.3 Safety and Ergonomic Compliance
- 8.4 Privacy, Intellectual Property and Data Flow
- 8.5 Electronic Commerce
- 8.6 Compliance with Insurance Contracts

CONTROL OBJECTIVES

This page intentionally left blank

PLANNING & ORGANISATION

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

defining a strategic IT plan

that satisfies the business requirement

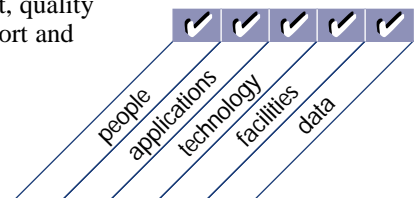

to strike an optimum balance of information technology opportunities and IT business requirements as well as ensuring its further accomplishment

is enabled by

a strategic planning process undertaken at regular intervals giving rise to long-term plans; the long-term plans should periodically be translated into operational plans setting clear and concrete short-term goals

and takes into consideration

- enterprise business strategy
- definition of how IT supports the business objectives
- inventory of technological solutions and current infrastructure
- monitoring the technology markets
- timely feasibility studies and reality checks
- existing systems assessments
- enterprise position on risk, time-to-market, quality
- need for senior management buy-in, support and critical review

DETAILED CONTROL OBJECTIVES

1 DEFINE A STRATEGIC INFORMATION TECHNOLOGY PLAN

1.1 IT as Part of the Organisation's Long- and Short-Range Plan

CONTROL OBJECTIVE

Senior management is responsible for developing and implementing long- and short-range plans that fulfill the organisation's mission and goals. In this respect, senior management should ensure that IT issues as well as opportunities are adequately assessed and reflected in the organisation's long- and short-range plans. IT long- and short-range plans should be developed to help ensure that the use of IT is aligned with the mission and business strategies of the organisation.

1.2 IT Long-Range Plan

CONTROL OBJECTIVE

IT management and business process owners are responsible for regularly developing IT long-range plans supporting the achievement of the organisation's overall missions and goals. The planning approach should include mechanisms to solicit input from relevant internal and external stakeholders impacted by the IT strategic plans. Accordingly, management should implement a long-range planning process, adopt a structured approach and set up a standard plan structure.

1.3 IT Long-Range Planning — Approach and Structure

CONTROL OBJECTIVE

IT management and business process owners should establish and apply a structured approach regarding the long-range planning process. This should result in a high-quality plan which covers the basic questions of what, who, how, when and why. The IT planning process should take into account risk assessment results, including business, environmental, technology and human resources risks. Aspects which need to be taken into account and adequately addressed during the

planning process include the organisational model and changes to it, geographical distribution, technological evolution, costs, legal and regulatory requirements, requirements of third parties or the market, planning horizon, business process re-engineering, staffing, in- or out-sourcing, data, application systems and technology architectures. Benefits of the choices made should be clearly identified. The IT long- and short-range plans should incorporate performance indicators and targets. The plan itself should also refer to other plans such as the organisation quality plan and the information risk management plan.

1.4 IT Long-Range Plan Changes

CONTROL OBJECTIVE

IT management and business process owners should ensure a process is in place to modify the IT long-range plan in a timely and accurate manner to accommodate changes to the organisation's long-range plan and changes in IT conditions. Management should establish a policy requiring that IT long- and short-range plans are developed and maintained.

1.5 Short-Range Planning for the IT Function

CONTROL OBJECTIVE

IT management and business process owners should ensure that the IT long-range plan is regularly translated into IT short-range plans. Such short-range plans should ensure that appropriate IT function resources are allocated on a basis consistent with the IT long-range plan. The short-range plans should be reassessed periodically and amended as necessary in response to changing business and IT conditions. The timely performance of feasibility studies should ensure that the execution of the short-range plans is adequately initiated.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

1.6 Communication of IT Plans

CONTROL OBJECTIVE

Management should ensure that IT long- and short-range plans are communicated to business process owners and other relevant parties across the organisation.

1.7 Monitoring and Evaluating of IT Plans

CONTROL OBJECTIVE

Management should establish processes to capture and report feedback from business process owners and users regarding the quality and usefulness of long- and short-range plans. The feedback obtained should be evaluated and considered in future IT planning.

1.8 Assessment of Existing Systems

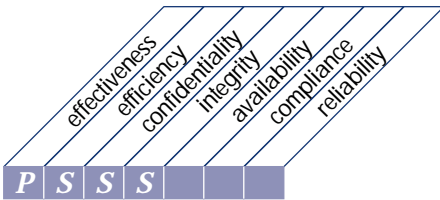

CONTROL OBJECTIVE

Prior to developing or changing the strategic, or long-range, IT plan, IT management should assess the existing information systems in terms of degree of business automation, functionality, stability, complexity, costs, strengths and weaknesses in order to determine the degree to which the existing systems support the organisation's business requirements.

CONTROL OBJECTIVES

This page intentionally left blank

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

defining the information architecture

that satisfies the business requirement

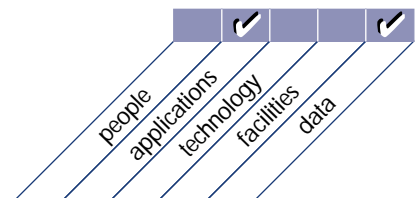

of optimising the organisation of the information systems

is enabled by

creating and maintaining a business information model and ensuring appropriate systems are defined to optimise the use of this information

and takes into consideration

- automated data repository and dictionary
- data syntax rules
- data ownership and criticality/security classification
- an information model representing the business
- enterprise information architectural standards

DETAILED CONTROL OBJECTIVES

2 DEFINE THE INFORMATION ARCHITECTURE**2.1 Information Architecture Model***CONTROL OBJECTIVE*

Information should be kept consistent with needs and should be identified, captured and communicated in a form and timeframe that enables people to carry out their responsibilities effectively and on a timely basis. Accordingly, the IT function should create and regularly update an information architecture model, encompassing the corporate data model and the associated information systems. The information architecture model should be kept consistent with the IT long-range plan.

2.2 Corporate Data Dictionary and Data Syntax Rules*CONTROL OBJECTIVE*

The IT function should ensure the creation and continuous updating of a corporate data dictionary which incorporates the organisation's data syntax rules.

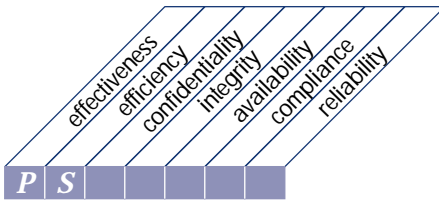

2.3 Data Classification Scheme*CONTROL OBJECTIVE*

A general classification framework should be established with regard to placement of data in information classes (i.e., security categories) as well as allocation of ownership. The access rules for the classes should be appropriately defined.

2.4 Security Levels*CONTROL OBJECTIVE*

Management should define, implement and maintain security levels for each of the data classifications identified above the level of "no protection required." These security levels should represent the appropriate (minimum) set of security and control measures for each of the classifications and should be re-evaluated periodically and modified accordingly. Criteria for supporting different levels of security in the extended enterprise should be established to address the needs of evolving e-commerce, mobile computing and telecommuting environments.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

determining technological direction

that satisfies the business requirement

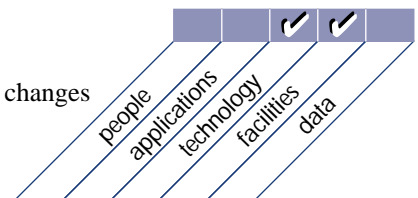

to take advantage of available and emerging technology to drive and make possible the business strategy

is enabled by

creation and maintenance of a technological infrastructure plan that sets and manages clear and realistic expectations of what technology can offer in terms of products, services and delivery mechanisms

and takes into consideration

- capability of current infrastructure
- monitoring technology developments via reliable sources
- conducting proof-of-concepts
- risk, constraints and opportunities
- acquisition plans
- migration strategy and roadmaps
- vendor relationships
- independent technology reassessment
- hardware and software price/performance changes

DETAILED CONTROL OBJECTIVES

3 DETERMINE TECHNOLOGICAL DIRECTION**3.1 Technological Infrastructure Planning***CONTROL OBJECTIVE*

The IT function should create and regularly update a technological infrastructure plan which is in accordance with the IT long- and short-range plans. Such a plan should encompass aspects such as systems architecture, technological direction and migration strategies.

3.2 Monitor Future Trends and Regulations*CONTROL OBJECTIVE*

Continuous monitoring of future trends and regulatory conditions should be ensured by the IT function so that these factors can be taken into consideration during the development and maintenance of the technological infrastructure plan.

3.3 Technological Infrastructure Contingency*CONTROL OBJECTIVE*

The technological infrastructure plan should be assessed systematically for contingency aspects (i.e., redundancy, resilience, adequacy and evolutionary capability of the infrastructure).

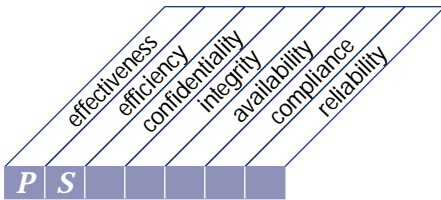

3.4 Hardware and Software Acquisition Plans*CONTROL OBJECTIVE*

IT management should ensure that hardware and software acquisition plans are established and reflect the needs identified in the technological infrastructure plan.

3.5 Technology Standards*CONTROL OBJECTIVE*

Based on the technological infrastructure plan, IT management should define technology norms in order to foster standardisation.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

defining the IT organisation and relationships

that satisfies the business requirement

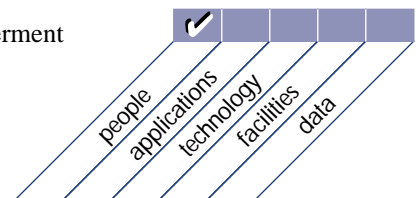

to deliver the right IT services

is enabled by

an organisation suitable in numbers and skills with roles and responsibilities defined and communicated, aligned with the business and that facilitates the strategy and provides for effective direction and adequate control

and takes into consideration

- board level responsibility for IT
- management's direction and supervision of IT
- IT's alignment with the business
- IT's involvement in key decision processes
- organisational flexibility
- clear roles and responsibilities
- balance between supervision and empowerment
- job descriptions
- staffing levels and key personnel
- organisational positioning of security, quality and internal control functions
- segregation of duties

Planning &
Organisation

Acquisition &
Implementation

Delivery &
Support

Monitoring

DETAILED CONTROL OBJECTIVES

4 DEFINE THE INFORMATION TECHNOLOGY ORGANISATION AND RELATIONSHIPS

4.1 IT Planning or Steering Committee

CONTROL OBJECTIVE

The organisation's senior management should appoint a planning or steering committee to oversee the IT function and its activities. Committee membership should include representatives from senior management, user management and the IT function. The committee should meet regularly and report to senior management.

4.2 Organisational Placement of the IT Function

CONTROL OBJECTIVE

In placing the IT function in the overall organisation structure, senior management should ensure authority, critical mass and independence from user departments to the degree necessary to guarantee effective IT solutions and sufficient progress in implementing them, and to establish a partnership relation with top management to help increase awareness, understanding and skill in identifying and resolving IT issues.

4.3 Review of Organisational Achievements

CONTROL OBJECTIVE

A framework should be in place for reviewing the organisational structure to continuously meet objectives and changing circumstances.

4.4 Roles and Responsibilities

CONTROL OBJECTIVE

Management should ensure that all personnel in the organisation have and know their roles and responsibilities in relation to information systems. All personnel should have sufficient authority to exercise the role and responsibility assigned to them. Roles should be designed with consideration to appropriate segregation of duties. No one individual should control all key aspects of a transaction or event. Everyone should be made aware that they have some degree of responsibility for internal control and

security. Consequently, regular campaigns should be organised and undertaken to increase awareness and discipline.

4.5 Responsibility for Quality Assurance

CONTROL OBJECTIVE

Management should assign the responsibility for the performance of the quality assurance function to staff members of the IT function and ensure that appropriate quality assurance, systems, controls and communications expertise exist in the IT function's quality assurance group. The organisational placement within the IT function and the responsibilities and the size of the quality assurance group should satisfy the requirements of the organisation.

4.6 Responsibility for Logical and Physical Security

CONTROL OBJECTIVE

Management should formally assign the responsibility for assuring both the logical and physical security of the organisation's information assets to an information security manager, reporting to the organisation's senior management. At a minimum, security management responsibility should be established at the organisation-wide level to deal with overall security issues in an organisation. If needed, additional security management responsibilities should be assigned at a system-specific level to cope with the related security issues.

4.7 Ownership and Custodianship

CONTROL OBJECTIVE

Management should create a structure for formally appointing the data owners and custodians. Their roles and responsibilities should be clearly defined.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

4.8 Data and System Ownership

CONTROL OBJECTIVE

Management should ensure that all information assets (data and systems) have an appointed owner who makes decisions about classification and access rights. System owners typically delegate day-to-day custodianship to the systems delivery/operations group and delegate security responsibilities to a security administrator. Owners, however, remain accountable for the maintenance of appropriate security measures.

4.9 Supervision

CONTROL OBJECTIVE

Senior management should implement adequate supervisory practices in the IT function to ensure that roles and responsibilities are properly exercised, to assess whether all personnel have sufficient authority and resources to execute their roles and responsibilities, and to generally review key performance indicators.

4.10 Segregation of Duties

CONTROL OBJECTIVE

Senior management should implement a division of roles and responsibilities which should exclude the possibility for a single individual to subvert a critical process. Management should also make sure that personnel are performing only those duties stipulated for their respective jobs and positions. In particular, a segregation of duties should be maintained between the following functions:

- information systems use
- data entry
- computer operation
- network management
- system administration
- systems development and maintenance
- change management
- security administration
- security audit

4.11 IT Staffing

CONTROL OBJECTIVE

Staffing requirements evaluations should be performed regularly to ensure the IT function has a sufficient number of competent IT staff. Staffing requirements should be evaluated at least annually or upon major changes to the business, operational or IT environment. Evaluation results should be acted upon promptly to ensure adequate staffing now and in the future.

4.12 Job or Position Descriptions for IT Staff

CONTROL OBJECTIVE

Management should ensure that position descriptions for IT staff are established and updated regularly. These position descriptions should clearly delineate both authority and responsibility, include definitions of skills and experience needed in the relevant position, and be suitable for use in performance evaluation.

4.13 Key IT Personnel

CONTROL OBJECTIVE

IT management should define and identify key IT personnel.

4.14 Contracted Staff Policies and Procedures

CONTROL OBJECTIVE

Management should define and implement relevant policies and procedures for controlling the activities of consultants and other contract personnel by the IT function to assure the protection of the organisation's information assets.

4.15 Relationships

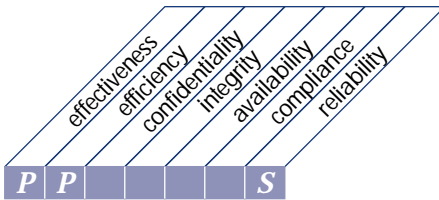

CONTROL OBJECTIVE

IT management should undertake the necessary actions to establish and maintain an optimal coordination, communication and liaison structure between the IT function and various other interests inside and outside the IT function (i.e., users, suppliers, security officers, risk managers).

CONTROL OBJECTIVES

This page intentionally left blank

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing the IT investment

that satisfies the business requirement

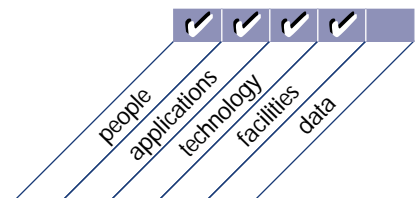

to ensure funding and to control disbursement of financial resources

is enabled by

a periodic investment and operational budget established and approved
by the business

and takes into consideration

- funding alternatives
- clear budget ownership
- control of actual spending
- cost justification and awareness of total cost of ownership
- benefit justification and accountability for benefit fulfillment
- technology and application software life cycles
- alignment with enterprise business strategy
- impact assessment
- asset management

DETAILED CONTROL OBJECTIVES

5 MANAGE THE INFORMATION TECHNOLOGY INVESTMENT**5.1 Annual IT Operating Budget***CONTROL OBJECTIVE*

Senior management should implement a budgeting process to ensure that an annual IT operating budget is established and approved in line with the organisation's long- and short-range plans as well as with the IT long- and short-range plans. Funding alternatives should be investigated.

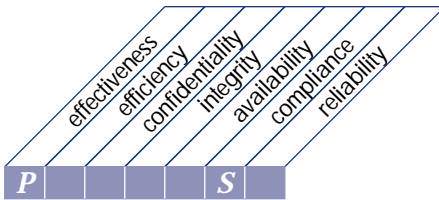

5.2 Cost and Benefit Monitoring*CONTROL OBJECTIVE*

Management should establish a cost monitoring process comparing actuals to budgets. Moreover, the possible benefits derived from the IT activities should be determined and reported. For cost monitoring, the source of the actual figures should be based upon the organisation's accounting system and that system should routinely record, process and report the costs associated with the activities of the IT function. For benefit monitoring, high-level performance indicators should be defined, regularly reported and reviewed for adequacy.

5.3 Cost and Benefit Justification*CONTROL OBJECTIVE*

A management control should be in place to guarantee that the delivery of services by the IT function is cost justified and in line with the industry. The benefits derived from IT activities should similarly be analysed.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

communicating management aims and direction

that satisfies the business requirement

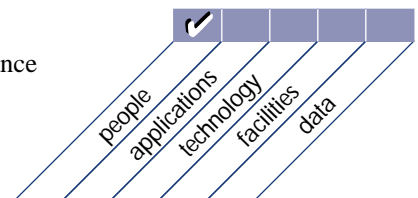

to ensure user awareness and understanding of those aims

is enabled by

policies established and communicated to the user community;
furthermore, standards need to be established to translate the
strategic options into practical and usable user rules

and takes into consideration

- clearly articulated mission
- technology directives linked to business aims
- code of conduct/ethics
- quality commitment
- security and internal control policies
- security and internal control practices
- lead-by-example
- continuous communications programme
- providing guidance and checking compliance

DETAILED CONTROL OBJECTIVES

6 COMMUNICATE MANAGEMENT AIMS AND DIRECTION

Management should also monitor the timeliness of the policy implementation.

6.1 Positive Information Control Environment

CONTROL OBJECTIVE

In order to provide guidance for proper behaviour, remove temptation for unethical behaviour and provide discipline, where appropriate, management should create a framework and an awareness programme fostering a positive control environment throughout the entire organisation. This should address the integrity, ethical values and competence of the people, management philosophy, operating style and accountability. Specific attention is to be given to IT aspects, including security and business continuity planning.

6.5 Maintenance of Policies

CONTROL OBJECTIVE

Policies should be adjusted regularly to accommodate changing conditions. Policies should be re-evaluated, at least annually or upon significant changes to the operating or business environment, to assess their adequacy and appropriateness, and amended as necessary. Management should provide a framework and process for the periodic review and approval of standards, policies, directives and procedures.

6.2 Management's Responsibility for Policies

CONTROL OBJECTIVE

Management should assume full responsibility for formulating, developing, documenting, promulgating and controlling policies covering general aims and directives. Regular reviews of policies for appropriateness should be carried out. The complexity of the written policies and procedures should always be commensurate with the organisation size and management style.

6.6 Compliance with Policies, Procedures and Standards

CONTROL OBJECTIVE

Management should ensure that appropriate procedures are in place to determine whether personnel understand the implemented policies and procedures, and that the policies and procedures are being followed. Compliance procedures for ethical, security and internal control standards should be set by top management and promoted by example.

6.3 Communication of Organisation Policies

CONTROL OBJECTIVE

Management should ensure that organisational policies are clearly communicated, understood and accepted by all levels in the organisation. The communication process should be supported by an effective plan that uses a diversified set of communication means.

6.7 Quality Commitment

CONTROL OBJECTIVE

IT management should define, document and maintain a quality philosophy, policies and objectives which are consistent with the corporate philosophies and policies in this regard. The quality philosophy, policies and objectives should be understood, implemented and maintained at all levels of the IT function.

6.4 Policy Implementation Resources

CONTROL OBJECTIVE

Management should plan for appropriate resources for policy implementation and for ensuring compliance, so that they are built into and are an integral part of operations.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

6.8 Security and Internal Control Framework Policy

CONTROL OBJECTIVE

Management should assume full responsibility for developing and maintaining a framework policy which establishes the organisation's overall approach to security and internal control to establish and improve the protection of IT resources and integrity of IT systems. The policy should comply with overall business objectives and be aimed at minimisation of risks through preventive measures, timely identification of irregularities, limitation of losses and timely restoration. Measures should be based on cost/benefit analyses and should be prioritised. In addition, management should ensure that this high-level security and internal control policy specifies the purpose and objectives, the management structure, the scope within the organisation, the definition and assignment of responsibilities for implementation at all levels, and the definition of penalties and disciplinary actions associated with failing to comply with security and internal control policies. Criteria for periodic re-evaluation of the framework should be defined to support responsiveness to changing organisational, environmental and technical requirements.

6.9 Intellectual Property Rights

CONTROL OBJECTIVE

Management should provide and implement a written policy on intellectual property rights covering in-house as well as contract-developed software.

6.10 Issue-Specific Policies

CONTROL OBJECTIVE

Measures should be put in place to ensure that issue-specific policies are established to document management decisions in addressing particular activities, applications, systems or technologies.

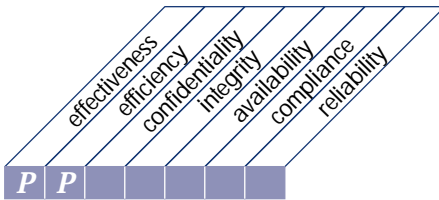

6.11 Communication of IT Security Awareness

CONTROL OBJECTIVE

An IT security awareness programme should communicate the IT security policy to each IT user and assure a complete understanding of the importance of IT security. It should convey the message that IT security is to the benefit of the organisation, all its employees, and that everybody is responsible for it. The IT security awareness programme should be supported by, and represent, the view of management.

This page intentionally left blank

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing human resources

that satisfies the business requirement

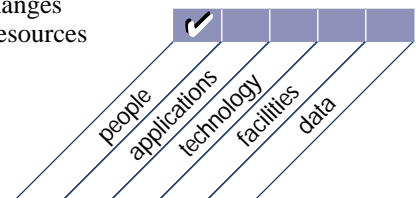

to acquire and maintain a motivated and competent workforce and
maximise personnel contributions to the IT processes

is enabled by

sound, fair and transparent personnel management practices to recruit,
line, vet, compensate, train, appraise, promote and dismiss

and takes into consideration

- recruitment and promotion
- training and qualification requirements
- awareness building
- cross-training and job rotation
- hiring, vetting and dismissal procedures
- objective and measurable performance evaluation
- responsiveness to technical and market changes
- properly balancing internal and external resources
- succession plan for key positions

DETAILED CONTROL OBJECTIVES

7 **MANAGE HUMAN RESOURCES**

7.1 **Personnel Recruitment and Promotion**

CONTROL OBJECTIVE

Management should implement and regularly assess the needed processes to ensure that personnel recruiting and promotion practices are based on objective criteria and consider education, experience and responsibility. These processes should be in line with the overall organisation's policies and procedures in this regard, such as hiring, orienting, training, evaluating, counselling, promoting, compensating and disciplining. Management should ensure that knowledge and skill needs are continually assessed and that the organisation is able to obtain a workforce that has the skills which match those necessary to achieve organisational goals.

7.2 **Personnel Qualifications**

CONTROL OBJECTIVE

IT management should regularly verify that personnel performing specific tasks are qualified on the basis of appropriate education, training and/or experience, as required. Management should encourage personnel to obtain membership in professional organisations.

7.3 **Roles and Responsibilities**

CONTROL OBJECTIVE

Management should clearly define roles and responsibilities for personnel, including the requirement to adhere to management policies and procedures, the code of ethics and professional practices. The terms and conditions of employment should stress the employee's responsibility for information security and internal control.

7.4 **Personnel Training**

CONTROL OBJECTIVE

Management should ensure that employees are provided with orientation upon hiring and with on-going training to maintain their knowledge, skills, abilities and security awareness to the level required to perform effectively. Education and training programmes conducted to effectively raise the technical and management skill levels of personnel should be reviewed regularly.

7.5 **Cross-Training or Staff Back-up**

CONTROL OBJECTIVE

Management should provide for sufficient cross-training or back-up of identified key personnel to address unavailabilities. Management should establish succession plans for all key functions and positions. Personnel in sensitive positions should be required to take uninterrupted holidays of sufficient length to exercise the organisation's ability to cope with unavailabilities and to prevent and detect fraudulent activity.

7.6 **Personnel Clearance Procedures**

CONTROL OBJECTIVE

IT management should ensure that their personnel are subjected to security clearance before they are hired, transferred or promoted, depending on the sensitivity of the position. An employee who was not subjected to such a clearance when first hired, should not be placed in a sensitive position until a security clearance has been obtained.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

7.7 Employee Job Performance Evaluation

CONTROL OBJECTIVE

Management should implement an employee performance evaluation process, reinforced by an effective reward system, that is designed to help employees understand the connection between their performance and the organisation's success. Evaluation should be performed against established standards and specific job responsibilities on a regular basis. Employees should receive counselling on performance or conduct whenever appropriate.

7.8 Job Change and Termination

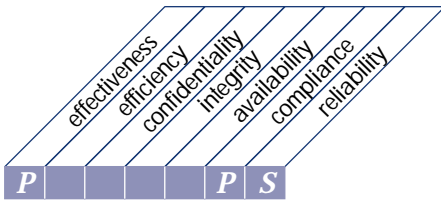

CONTROL OBJECTIVE

Management should ensure that appropriate and timely actions are taken regarding job changes and job terminations so that internal controls and security are not impaired by such occurrences.

CONTROL OBJECTIVES

This page intentionally left blank

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

ensuring compliance with external requirements

that satisfies the business requirement

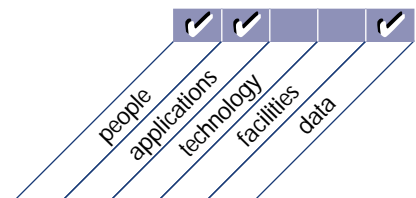

to meet legal, regulatory and contractual obligations

is enabled by

identifying and analysing external requirements for their IT impact,
and taking appropriate measures to comply with them

and takes into consideration

- laws, regulations and contracts
- monitoring legal and regulatory developments
- regular monitoring for compliance
- safety and ergonomics
- privacy
- intellectual property

DETAILED CONTROL OBJECTIVES

8 ENSURE COMPLIANCE WITH EXTERNAL REQUIREMENTS**8.1 External Requirements Review***CONTROL OBJECTIVE*

The organisation should establish and maintain procedures for external requirements review and for the coordination of these activities. Continuous research should determine the applicable external requirements for the organisation. Legal, government or other external requirements related to IT practices and controls should be reviewed. Management should also assess the impact of any external relationships on the organisation's overall information needs, including determination of the extent to which IT strategies need to conform with or support the requirements of any related third-parties.

8.2 Practices and Procedures for Complying with External Requirements*CONTROL OBJECTIVE*

Organisational practices should ensure that appropriate corrective actions are taken on a timely basis to guarantee compliance with external requirements. In addition, adequate procedures assuring continuous compliance should be established and maintained. In this regard, management should seek legal advice if required.

8.3 Safety and Ergonomic Compliance*CONTROL OBJECTIVE*

Management should ensure compliance with safety and ergonomic standards in the working environment of IT users and personnel.

8.4 Privacy, Intellectual Property and Data Flow*CONTROL OBJECTIVE*

Management should ensure compliance with privacy, intellectual property, transborder data flow and cryptographic regulations applicable to the IT practices of the organisation.

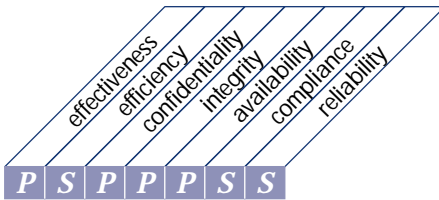

8.5 Electronic Commerce*CONTROL OBJECTIVE*

Management should ensure that formal contracts are in place establishing agreement between trading partners on communication processes and on standards for transaction message security and data storage. When trading on the Internet, management should enforce adequate controls to ensure compliance with local laws and customs on a world-wide basis.

8.6 Compliance with Insurance Contracts*CONTROL OBJECTIVE*

Management should ensure that insurance contract requirements are properly identified and continuously met.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
assessing risks

that satisfies the business requirement

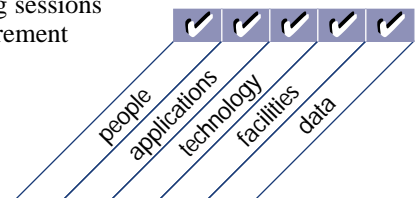

of supporting management decisions through achieving IT objectives and responding to threats by reducing complexity, increasing objectivity and identifying important decision factors

is enabled by

the organisation engaging itself in IT risk-identification and impact analysis, involving multi-disciplinary functions and taking cost-effective measures to mitigate risks

and takes into consideration

- risk management ownership and accountability
- different kinds of IT risks (technology, security, continuity, regulatory, etc.)
- defined and communicated risk tolerance profile
- root cause analyses and risk brainstorming sessions
- quantitative and/or qualitative risk measurement
- risk assessment methodology
- risk action plan
- timely reassessment

DETAILED CONTROL OBJECTIVES

9 ASSESS RISKS

9.1 Business Risk Assessment

CONTROL OBJECTIVE

Management should establish a systematic risk assessment framework. Such a framework should incorporate a regular assessment of the relevant information risks to the achievement of the business objectives, forming a basis for determining how the risks should be managed to an acceptable level. The process should provide for risk assessments at both the global level and system specific level, for new projects as well as on a recurring basis, and with cross-disciplinary participation. Management should ensure that reassessments occur and that risk assessment information is updated with results of audits, inspections and identified incidents.

9.2 Risk Assessment Approach

CONTROL OBJECTIVE

Management should establish a general risk assessment approach which defines the scope and boundaries, the methodology to be adopted for risk assessments, the responsibilities and the required skills. Management should lead the identification of the risk mitigation solution and be involved in identifying vulnerabilities. Security specialists should lead threat identification and IT specialists should drive the control selection. The quality of the risk assessments should be ensured by a structured method and skilled risk assessors.

9.3 Risk Identification

CONTROL OBJECTIVE

The risk assessment approach should focus on the examination of the essential elements of risk and the cause/effect relationship between them. The essential elements of risk include tangible and intangible assets, asset value, threats, vulnerabilities, safeguards, consequences and likelihood of threat. The risk identification process should include qualitative and, where appropriate,

quantitative risk ranking and should obtain input from management brainstorming, strategic planning, past audits and other assessments. The risk assessment should consider business, regulatory, legal, technology, trading partner and human resources risks.

9.4 Risk Measurement

CONTROL OBJECTIVE

The risk assessment approach should ensure that the analysis of risk identification information results in a quantitative and/or qualitative measurement of risk to which the examined area is exposed. The risk acceptance capacity of the organisation should also be assessed.

9.5 Risk Action Plan

CONTROL OBJECTIVE

The risk assessment approach should provide for the definition of a risk action plan to ensure that cost-effective controls and security measures mitigate exposure to risks on a continuing basis. The risk action plan should identify the risk strategy in terms of risk avoidance, mitigation or acceptance.

9.6 Risk Acceptance

CONTROL OBJECTIVE

The risk assessment approach should ensure the formal acceptance of the residual risk, depending on risk identification and measurement, organisational policy, uncertainty incorporated in the risk assessment approach itself and the cost effectiveness of implementing safeguards and controls. The residual risk should be offset with adequate insurance coverage, contractually negotiated liabilities and self-insurance.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

9.7 Safeguard Selection

CONTROL OBJECTIVE

While aiming for a reasonable, appropriate and proportional system of controls and safeguards, controls with the highest return on investment (ROI) and those that provide quick wins should receive first priority. The control system also needs to balance prevention, detection, correction and recovery measures. Furthermore, management needs to communicate the purpose of the control measures, manage conflicting measures and monitor the continuing effectiveness of all control measures.

9.8 Risk Assessment Commitment

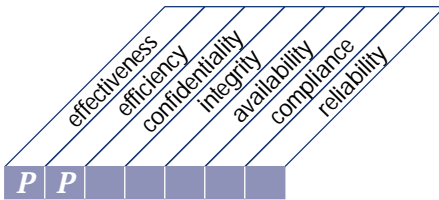

CONTROL OBJECTIVE

Management should encourage risk assessment as an important tool in providing information in the design and implementation of internal controls, in the definition of the IT strategic plan and in the monitoring and evaluation mechanisms.

CONTROL OBJECTIVES

This page intentionally left blank

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing projects

that satisfies the business requirement

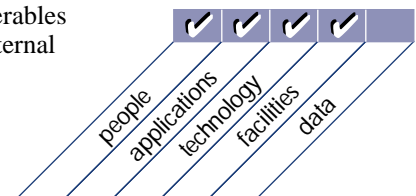

to set priorities and to deliver on time and within budget

is enabled by

the organisation identifying and prioritising projects in line with the operational plan and the adoption and application of sound project management techniques for each project undertaken

and takes into consideration

- business management sponsorship for projects
- program management
- project management capabilities
- user involvement
- task breakdown, milestone definition and phase approvals
- allocation of responsibilities
- rigorous tracking of milestones and deliverables
- cost and manpower budgets, balancing internal and external resources
- quality assurance plans and methods
- program and project risk assessments
- transition from development to operations

Planning &
Organisation

Acquisition &
Implementation

Delivery &
Support

Monitoring

DETAILED CONTROL OBJECTIVES

10 MANAGE PROJECTS**10.1 Project Management Framework***CONTROL OBJECTIVE*

Management should establish a general project management framework which defines the scope and boundaries of managing projects, as well as the project management methodology to be adopted and applied to each project undertaken. The methodology should cover, at a minimum, the allocation of responsibilities, task breakdown, budgeting of time and resources, milestones, check points and approvals.

10.2 User Department Participation in Project Initiation*CONTROL OBJECTIVE*

The organisation's project management framework should provide for participation by the affected user department management in the definition and authorisation of a development, implementation or modification project.

10.3 Project Team Membership and Responsibilities*CONTROL OBJECTIVE*

The organisation's project management framework should specify the basis for assigning staff members to the project and define the responsibilities and authorities of the project team members.

10.4 Project Definition*CONTROL OBJECTIVE*

The organisation's project management framework should provide for the creation of a clear written statement defining the nature and scope of every implementation project before work on the project begins.

10.5 Project Approval*CONTROL OBJECTIVE*

The organisation's project management framework should ensure that for each proposed project, the organisation's senior management reviews the reports of the relevant feasibility studies as a basis for its decision on whether to proceed with the project.

10.6 Project Phase Approval*CONTROL OBJECTIVE*

The organisation's project management framework should provide for designated managers of the user and IT functions to approve the work accomplished in each phase of the cycle before work on the next phase begins.

10.7 Project Master Plan*CONTROL OBJECTIVE*

Management should ensure that for each approved project a project master plan is created which is adequate for maintaining control over the project throughout its life and which includes a method of monitoring the time and costs incurred throughout the life of the project. The content of the project plan should include statements of scope, objectives, required resources and responsibilities and should provide information to permit management to measure progress.

10.8 System Quality Assurance Plan*CONTROL OBJECTIVE*

Management should ensure that the implementation of a new or modified system includes the preparation of a quality plan which is then integrated with the project master plan and formally reviewed and agreed to by all parties concerned.

10.9 Planning of Assurance Methods*CONTROL OBJECTIVE*

Assurance tasks are to be identified during the planning phase of the project management

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

framework. Assurance tasks should support the accreditation of new or modified systems and should assure that internal controls and security features meet the related requirements.

10.10 **Formal Project Risk Management**

CONTROL OBJECTIVE

Management should implement a formal project risk management programme for eliminating or minimising risks associated with individual projects (i.e., identifying and controlling the areas or events that have the potential to cause unwanted change).

10.11 **Test Plan**

CONTROL OBJECTIVE

The organisation's project management framework should require that a test plan be created for every development, implementation and modification project.

10.12 **Training Plan**

CONTROL OBJECTIVE

The organisation's project management framework should require that a training plan be created for every development, implementation and modification project.

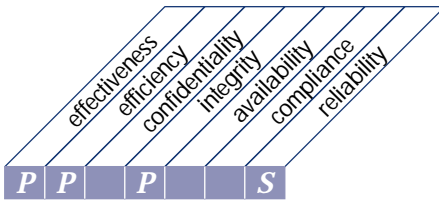

10.13 **Post-Implementation Review Plan**

CONTROL OBJECTIVE

The organisation's project management framework should provide, as an integral part of the project team's activities, for the development of a plan for a post-implementation review of every new or modified information system to ascertain whether the project has delivered the planned benefits.

This page intentionally left blank

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing quality

that satisfies the business requirement

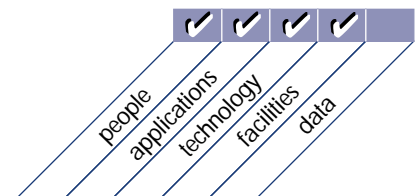

to meet the IT customer requirements

is enabled by

the planning, implementing and maintaining of quality management standards and systems providing for distinct development phases, clear deliverables and explicit responsibilities

and takes into consideration

- establishment of a quality culture
- quality plans
- quality assurance responsibilities
- quality control practices
- system development life cycle methodology
- programme and system testing and documentation
- quality assurance reviews and reporting
- training and involvement of end user and quality assurance personnel
- development of a quality assurance knowledge base
- benchmarking against industry norms

DETAILED CONTROL OBJECTIVE

11 MANAGE QUALITY**11.1 General Quality Plan***CONTROL OBJECTIVE*

Management should develop and regularly maintain an overall quality plan based on the organisational and IT long-range plans. The plan should promote the continuous improvement philosophy and answer the basic questions of what, who and how.

11.2 Quality Assurance Approach*CONTROL OBJECTIVE*

Management should establish a standard approach regarding quality assurance which covers both general and project specific quality assurance activities. The approach should prescribe the type(s) of quality assurance activities (such as reviews, audits, inspections, etc.) to be performed to achieve the objectives of the general quality plan. It should also require specific quality assurance reviews.

11.3 Quality Assurance Planning*CONTROL OBJECTIVE*

Management should implement a quality assurance planning process to determine the scope and timing of the quality assurance activities.

11.4 Quality Assurance Review of Adherence to IT Standards and Procedures*CONTROL OBJECTIVE*

Management should ensure that the responsibilities assigned to the quality assurance personnel include a review of general adherence to IT standards and procedures.

11.5 System Development Life Cycle Methodology*CONTROL OBJECTIVE*

The organisation's management should define and implement IT standards and adopt a system development life cycle methodology governing the process of developing, acquiring, implementing and maintaining computerised information

systems and related technology. The chosen system development life cycle methodology should be appropriate for the systems to be developed, acquired, implemented and maintained.

11.6 System Development Life Cycle Methodology for Major Changes to Existing Technology*CONTROL OBJECTIVE*

In the event of major changes to existing technology, management should ensure that a system development life cycle methodology is observed, as in the case of the acquisition or development of new technology.

11.7 Updating of the System Development Life Cycle Methodology*CONTROL OBJECTIVE*

Management should implement a periodic review of its system development life cycle methodology to ensure that its provisions reflect current generally accepted techniques and procedures.

11.8 Coordination and Communication*CONTROL OBJECTIVE*

Management should establish a process for ensuring close coordination and communication between customers of the IT function and system implementors. This process should entail structured methods using the system development life cycle methodology to ensure the provision of quality IT solutions which meet the business demands. Management should promote an organisation which is characterised by close cooperation and communication throughout the system development life cycle.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

11.9 Acquisition and Maintenance Framework for the Technology Infrastructure

CONTROL OBJECTIVE

A general framework should be in place regarding the acquisition and maintenance of the technology infrastructure. The different steps to be followed regarding the technology infrastructure (such as acquiring; programming, documenting, and testing; parameter setting; maintaining and applying fixes) should be governed by, and in line with, the acquisition and maintenance framework for the technology infrastructure.

11.10 Third-Party Implementor Relationships

CONTROL OBJECTIVE

Management should implement a process to ensure good working relationships with third-party implementors. Such a process should provide that the user and implementor agree to acceptance criteria, handling of changes, problems during development, user roles, facilities, tools, software, standards and procedures.

11.11 Programme Documentation Standards

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should incorporate standards for programme documentation which have been communicated to the concerned staff and enforced. The methodology should ensure that the documentation created during information system development or modification projects conforms to these standards.

11.12 Programme Testing Standards

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide standards covering test requirements, verification, documentation and retention for testing individual software units and aggregated programmes created as part of every information system development or modification project.

11.13 System Testing Standards

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide standards covering test requirements, verification, documentation, and retention for the testing of the total system as a part of every information system development or modification project.

11.14 Parallel/Pilot Testing

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should define the circumstances under which parallel or pilot testing of new and/or existing systems will be conducted.

11.15 System Testing Documentation

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide, as part of every information system development, implementation, or modification project, that the documented results of testing the system are retained.

11.16 Quality Assurance Evaluation of Adherence to Development Standards*CONTROL OBJECTIVE*

The organisation's quality assurance approach should require that a post-implementation review of an operational information system assess whether the project team adhered to the provisions of the system development life cycle methodology.

11.17 Quality Assurance Review of the Achievement of IT Objectives*CONTROL OBJECTIVE*

The quality assurance approach should include a review of the extent to which particular systems and application development activities have achieved the objectives of the information services function.

11.18 Quality Metrics*CONTROL OBJECTIVE*

Management should define and use metrics to measure the results of activities, thus assessing whether quality goals have been achieved.

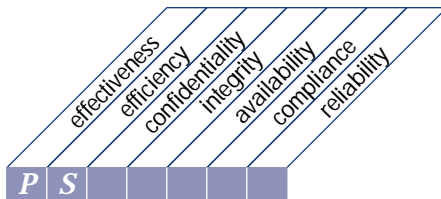

11.19 Reports of Quality Assurance Reviews*CONTROL OBJECTIVE*

Reports of quality assurance reviews should be prepared and submitted to management of user departments and the IT function.

This page intentionally left blank

ACQUISITION & IMPLEMENTATION

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
identifying automated solutions

that satisfies the business requirement

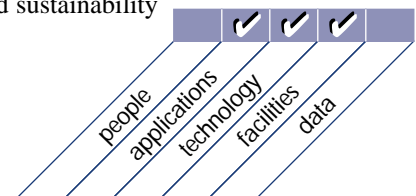

of ensuring an effective and efficient approach to satisfy the user requirements

is enabled by

an objective and clear identification and analysis of the alternative opportunities measured against user requirements

and takes into consideration

- knowledge of solutions available in the market
- acquisition and implementation methodologies
- user involvement and buy in
- alignment with enterprise and IT strategies
- information requirements definition
- feasibility studies (costs, benefits, alternatives, etc.)
- functionality, operability, acceptability and sustainability requirements
- compliance with information architecture
- cost-effective security and control
- supplier responsibilities

DETAILED CONTROL OBJECTIVES

1 IDENTIFY AUTOMATED SOLUTIONS

1.1 Definition of Information Requirements

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide that the business requirements satisfied by the existing system and to be satisfied by the proposed new or modified system (software, data and infrastructure) be clearly defined before a development, implementation or modification project is approved. The system development life cycle methodology should require that the solution's functional and operational requirements be specified including performance, safety, reliability, compatibility, security and legislation.

1.2 Formulation of Alternative Courses of Action

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide for the analysis of the alternative courses of action that will satisfy the business requirements established for a proposed new or modified system.

1.3 Formulation of Acquisition Strategy

CONTROL OBJECTIVE

Information systems acquisition, development and maintenance should be considered in the context of the organisation's IT long- and short-range plans. The organisation's system development life cycle methodology should provide for a software acquisition strategy plan defining whether the software will be acquired off-the-shelf, developed internally, through contract or by enhancing the existing software, or a combination of all these.

1.4 Third-Party Service Requirements

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide for the evaluation

of the requirements and the specifications for an RFP (request for proposal) when dealing with a third-party service vendor.

1.5 Technological Feasibility Study

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide for an examination of the technological feasibility of each alternative for satisfying the business requirements established for the development of a proposed new or modified information system project.

1.6 Economic Feasibility Study

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide, in each proposed information systems development, implementation and modification project, for an analysis of the costs and benefits associated with each alternative being considered for satisfying the established business requirements.

1.7 Information Architecture

CONTROL OBJECTIVE

Management should ensure that attention is paid to the enterprise data model while solutions are being identified and analysed for feasibility.

1.8 Risk Analysis Report

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide, in each proposed information system development, implementation or modification project, for an analysis and documentation of the security threats, potential vulnerabilities and impacts, and the feasible security and internal control safeguards for reducing or eliminating the identified risk. This should be realised in line with the overall risk assessment framework.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

1.9 Cost-Effective Security Controls

CONTROL OBJECTIVE

Management should ensure that the costs and benefits of security are carefully examined in monetary and non-monetary terms to guarantee that the costs of controls do not exceed benefits. The decision requires formal management sign-off. All security requirements should be identified at the requirements phase of a project and justified, agreed and documented as part of the overall business case for an information system. Security requirements for business continuity management should be defined to ensure that the planned activation, fallback and resumption processes are supported by the proposed solution.

1.10 Audit Trails Design

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that adequate mechanisms for audit trails are available or can be developed for the solution identified and selected. The mechanisms should provide the ability to protect sensitive data (e.g., user ID's) against discovery and misuse.

1.11 Ergonomics

CONTROL OBJECTIVE

Management should ensure that the information system development, implementation and change projects undertaken by the IT function pay attention to ergonomic issues associated with the introduction of automated solutions.

1.12 Selection of System Software

CONTROL OBJECTIVE

Management should ensure that a standard procedure is adhered to by the IT function to identify all potential system software programmes that will satisfy its operational requirements.

1.13 Procurement Control

CONTROL OBJECTIVE

Management should develop and implement a central procurement approach describing a common set of procedures and standards to be followed in the procurement of information technology related hardware, software and services. Products should be reviewed and tested prior to their use and the financial settlement.

1.14 Software Product Acquisition

CONTROL OBJECTIVE

Software product acquisition should follow the organisation's procurement policies.

1.15 Third-Party Software Maintenance

CONTROL OBJECTIVE

Management should require that for licensed software acquired from third-party providers, the providers have appropriate procedures to validate, protect and maintain the software product's integrity rights. Consideration should be given to the support of the product in any maintenance agreement related to the delivered product.

1.16 Contract Application Programming

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide that the procurement of contract programming services be justified with a written request for services from a designated member of the IT function. The contract should stipulate that the software, documentation and other deliverables are subject to testing and review prior to acceptance. In addition, it should require that the end products of completed contract programming services be tested and reviewed according to the related standards by the IT function's quality assurance group and other concerned parties (such as users, project managers, etc.) before payment for the work and approval of the end product. Testing to be includ-

ed in contract specifications should consist of system testing, integration testing, hardware and component testing, procedure testing, load and stress testing, tuning and performance testing, regression testing, user acceptance testing and, finally, pilot testing of the total system to avoid any unexpected system failure.

1.17 **Acceptance of Facilities**

CONTROL OBJECTIVE

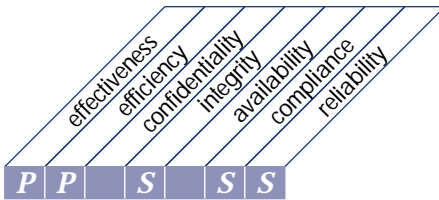

Management should ensure that an acceptance plan for facilities to be provided is agreed upon with the supplier in the contract and this plan defines the acceptance procedures and criteria. In addition, acceptance tests should be performed to guarantee that the accommodation and environment meet the requirements specified in the contract.

1.18 **Acceptance of Technology**

CONTROL OBJECTIVE

Management should ensure that an acceptance plan for specific technology to be provided is agreed upon with the supplier in the contract and this plan defines the acceptance procedures and criteria. In addition, acceptance tests provided for in the plan should include inspection, functionality tests and workload trials.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

acquiring and maintaining application software

that satisfies the business requirement

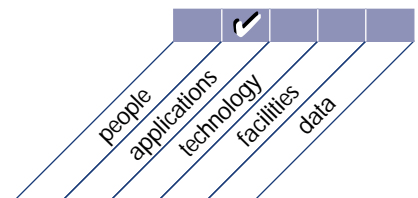

to provide automated functions which effectively support the business process

is enabled by

the definition of specific statements of functional and operational requirements, and a phased implementation with clear deliverables

and takes into consideration

- functional testing and acceptance
- application controls and security requirements
- documentation requirements
- application software life cycle
- enterprise information architecture
- system development life cycle methodology
- user-machine interface
- package customisation

DETAILED CONTROL OBJECTIVES

2 ACQUIRE AND MAINTAIN APPLICATION SOFTWARE

2.1 Design Methods

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide that appropriate procedures and techniques, involving close liaison with system users, are applied to create the design specifications for each new information system development project and to verify the design specifications against the user requirements.

2.2 Major Changes to Existing Systems

CONTROL OBJECTIVE

Management should ensure, that in the event of major changes to existing systems, a similar development process is observed as in the case of the development of new systems.

2.3 Design Approval

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that the design specifications for all information system development and modification projects be reviewed and approved by management, the affected user departments and the organisation's senior management, when appropriate.

2.4 File Requirements Definition and Documentation

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide that an appropriate procedure be applied for defining and documenting the file format for each information system development or modification project. Such a procedure should ensure that the data dictionary rules are respected.

2.5 Programme Specifications

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that detailed written programme specifications be prepared for each information system development or modification project. The methodology should further ensure that programme specifications agree with system design specifications.

2.6 Source Data Collection Design

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that adequate mechanisms for the collection and entry of data be specified for each information system development or modification project.

2.7 Input Requirements Definition and Documentation

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that adequate mechanisms exist for defining and documenting the input requirements for each information system development or modification project.

2.8 Definition of Interfaces

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide that all external and internal interfaces are properly specified, designed and documented.

2.9 User-Machine Interface

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide for the development of an interface between the user and machine which is easy to use and self-documenting (by means of online help functions).

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

2.10 Processing Requirements Definition and Documentation

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that adequate mechanisms exist for defining and documenting the processing requirements for each information system development or modification project.

2.11 Output Requirements Definition and Documentation

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that adequate mechanisms exist for defining and documenting the output requirements for each information system development or modification project.

2.12 Controllability

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that adequate mechanisms for assuring the internal control and security requirements be specified for each information system development or modification project. The methodology should further ensure that information systems are designed to include application controls which guarantee the accuracy, completeness, timeliness and authorisation of inputs, processing and outputs. Sensitivity assessment should be performed during initiation of system development or modification. The basic security and internal control aspects of a system to be developed or modified should be assessed along with the conceptual design of the system in order to integrate security concepts in the design as early as possible.

2.13 Availability as a Key Design Factor

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide that availability is considered in the design process for new or modified information systems at the earliest possible stage. Availability should be analysed and, if necessary, increased through maintainability and reliability improvements.

2.14 IT Integrity Provisions in Application Programme Software

CONTROL OBJECTIVE

The organisation should establish procedures to assure, where applicable, that application programmes contain provisions which routinely verify the tasks performed by the software to help assure data integrity, and which provide the restoration of the integrity through rollback or other means.

2.15 Application Software Testing

CONTROL OBJECTIVE

Unit testing, application testing, integration testing, system testing, and load and stress testing should be performed according to the project test plan and established testing standards before it is approved by the user. Adequate measures should be conducted to prevent disclosure of sensitive information used during testing.

2.16 User Reference and Support Materials

CONTROL OBJECTIVE

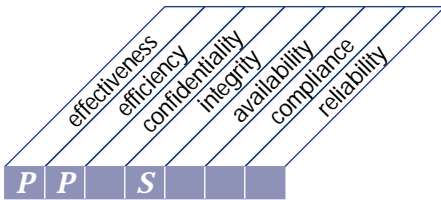

The organisation's system development life cycle methodology should provide that adequate user reference and support manuals be prepared (preferably in electronic format) as part of every information system development or modification project.

2.17 Reassessment of System Design

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should ensure that the system design is reassessed whenever significant technical and/or logical discrepancies occur during system development or maintenance.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

acquiring and maintaining technology infrastructure

that satisfies the business requirement

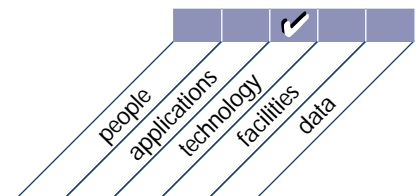

to provide the appropriate platforms for supporting business applications

is enabled by

judicious hardware and software acquisition, standardising of software, assessment of hardware and software performance, and consistent system administration

and takes into consideration

- compliance with technology infrastructure directions and standards
- technology assessment
- installation, maintenance and change controls
- upgrade, conversion and migration plans
- use of internal and external infrastructures and/or resources
- supplier responsibilities and relationships
- change management
- total cost of ownership
- system software security

Planning &
Organisation

Acquisition &
Implementation

Delivery &
Support

Monitoring

DETAILED CONTROL OBJECTIVES

3 ACQUIRE AND MAINTAIN TECHNOLOGY INFRASTRUCTURE

3.1 Assessment of New Hardware and Software

CONTROL OBJECTIVE

Hardware and software selection criteria should be based on the functional specifications for the new or modified system and should identify mandatory and optional requirements. Procedures should be in place to assess new hardware and software for any impact on the performance of the overall system.

3.2 Preventative Maintenance for Hardware

CONTROL OBJECTIVE

IT management should schedule routine and periodic hardware maintenance to reduce the frequency and impact of performance failures.

3.3 System Software Security

CONTROL OBJECTIVE

IT management should ensure that the set-up of system software to be installed does not jeopardise the security of the data and programmes being stored on the system. Attention should be paid to set-up and maintenance of system software parameters.

3.4 System Software Installation

CONTROL OBJECTIVE

Procedures should be implemented to ensure that system software is installed in accordance with the acquisition and maintenance framework for the technology infrastructure. Testing should be performed before use in the production environment is authorised. A group independent of the users and developers should control the movement of programmes and data among libraries.

3.5 System Software Maintenance

CONTROL OBJECTIVE

Procedures should be implemented to ensure that system software is maintained in accordance with the acquisition and maintenance framework for the technology infrastructure.

3.6 System Software Change Controls

CONTROL OBJECTIVE

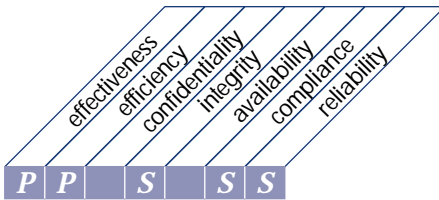

Procedures should be implemented to ensure that system software changes are controlled in line with the organisation's change management procedures.

3.7 Use and Monitoring of System Utilities

CONTROL OBJECTIVE

Policies and techniques should be implemented for using, monitoring and evaluating the use of system utilities. Responsibilities for using sensitive software utilities should be clearly defined and understood by developers, and the use of the utilities should be monitored and logged.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

developing and maintaining procedures

that satisfies the business requirement

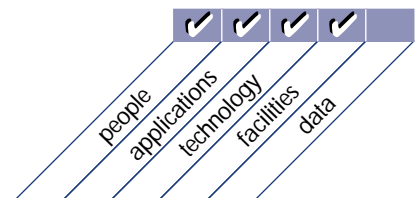

to ensure the proper use of the applications and the technological solutions put in place

is enabled by

a structured approach to the development of user and operations procedure manuals, service requirements and training materials

and takes into consideration

- business process re-design
- treating procedures as any other technology deliverable
- timely development
- user procedures and controls
- operational procedures and controls
- training materials
- managing change

DETAILED CONTROL OBJECTIVES

4 DEVELOP AND MAINTAIN PROCEDURES

4.1 Operational Requirements and Service Levels

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should ensure the timely definition of operational requirements and service levels.

4.2 User Procedures Manual

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide that adequate user procedures manuals be prepared and refreshed as part of every information system development, implementation or modification project.

4.3 Operations Manual

CONTROL OBJECTIVE

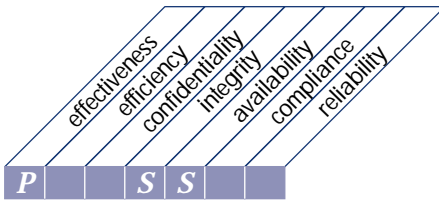

The organisation's system development life cycle methodology should provide that an adequate operations manual be prepared and kept up-to-date as part of every information system development, implementation or modification project.

4.4 Training Materials

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should ensure that adequate training materials are developed as part of every information system development, implementation or modification project. These materials should be focused on the system's use in daily practice.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

installing and accrediting systems

that satisfies the business requirement

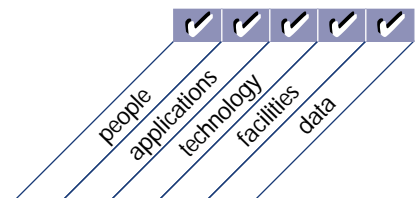

to verify and confirm that the solution is fit for the intended purpose

is enabled by

the realisation of a well-formalised installation migration, conversion and acceptance plan

and takes into consideration

- training of user and IT operations personnel
- data conversion
- a test environment reflecting the live environment
- accreditation
- post-implementation reviews and feedback
- end user involvement in testing
- continuous quality improvement plans
- business continuity requirements
- capacity and throughput measurement
- agreed upon acceptance criteria

DETAILED CONTROL OBJECTIVES

5 INSTALL AND ACCREDIT SYSTEMS

5.1 Training

CONTROL OBJECTIVE

Staff of the affected user departments and the operations group of the IT function should be trained in accordance with the defined training plan and associated materials, as part of every information systems development, implementation or modification project.

5.2 Application Software Performance Sizing

CONTROL OBJECTIVE

Application software performance sizing (optimisation) should be established as an integral part of the organisation's system development life cycle methodology to forecast the resources required for operating new and significantly changed software.

5.3 Implementation Plan

CONTROL OBJECTIVE

An implementation plan should be prepared, reviewed and approved by relevant parties and be used to measure progress. The implementation plan should address site preparation, equipment acquisition and installation, user training, installation of operating software changes, implementation of operating procedures and conversion.

5.4 System Conversion

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should provide, as part of every information system development, implementation or modification project, that the necessary elements from the old system are converted to the new one according to a pre-established plan.

5.5 Data Conversion

CONTROL OBJECTIVE

Management should require that a data conversion plan is prepared, defining the methods of collecting and verifying the data to be converted

and identifying and resolving any errors found during conversion. Tests to be performed include comparing the original and converted files, checking the compatibility of the converted data with the new system, checking master files after conversion to ensure the accuracy of master file data and ensuring that transactions affecting master files update both the old and the new master files during the period between initial conversion and final implementation. A detailed verification of the initial processing of the new system should be performed to confirm successful implementation. Management should ensure that the responsibility for successful conversion of data lies with the system owners.

5.6 Testing Strategies and Plans

CONTROL OBJECTIVE

Testing strategies and plans should be prepared and signed off by the system owner and IT management.

5.7 Testing of Changes

CONTROL OBJECTIVE

Management should ensure that changes are tested in accordance with the impact and resource assessment in a separate test environment by an independent (from builders) test group before use in the regular operational environment begins. Back-out plans should also be developed. Acceptance testing should be carried out in an environment representative of the future operational environment (e.g., similar security, internal controls, workloads, etc.).

5.8 Parallel/Pilot Testing Criteria and Performance

CONTROL OBJECTIVE

Procedures should be in place to ensure that parallel or pilot testing is performed in accordance with a pre-established plan and that the criteria for terminating the testing process are specified in advance.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

5.9 Final Acceptance Test

CONTROL OBJECTIVE

Procedures should provide, as part of the final acceptance or quality assurance testing of new or modified information systems, for a formal evaluation and approval of the test results by management of the affected user department(s) and the IT function. The tests should cover all components of the information system (e.g., application software, facilities, technology, user procedures).

5.10 Security Testing and Accreditation

CONTROL OBJECTIVE

Management should define and implement procedures to ensure that operations and user management formally accept the test results and the level of security for the systems, along with the remaining residual risk. These procedures should reflect the agreed upon roles and responsibilities of end user, system development, network management and system operations personnel, taking into account segregation, supervision and control issues.

5.11 Operational Test

CONTROL OBJECTIVE

Management should ensure that before moving the system into operation, the user or designated custodian (the party designated to run the system on behalf of the user) validates its operation as a complete product, under conditions similar to the application environment and in the manner in which the system will be run in a production environment.

5.12 Promotion to Production

CONTROL OBJECTIVE

Management should define and implement formal procedures to control the handover of the system from development to testing to operations. Management should require that system owner authorisation is obtained before a new system is moved into production and that, before the old system is discontinued, the new system will have successfully operated through all daily, monthly and quarterly production cycles. The respective environments should be segregated and properly protected.

5.13 Evaluation of Meeting User Requirements

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that a post-implementation review of operational information system requirements (e.g., capacity, throughput, etc.) be conducted to assess whether the users' needs are being met by the system.

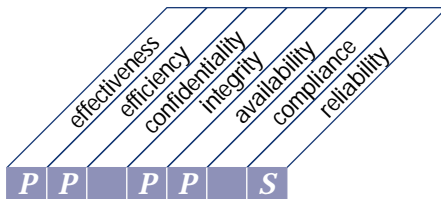

5.14 Management's Post-Implementation Review

CONTROL OBJECTIVE

The organisation's system development life cycle methodology should require that a post-implementation review of an operational information system assess and report on whether the system delivered the benefits envisioned in the most cost effective manner.

This page intentionally left blank

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing changes

that satisfies the business requirement

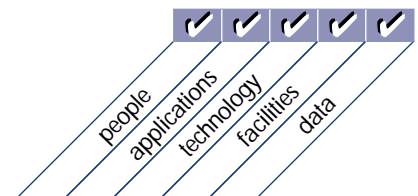

to minimise the likelihood of disruption, unauthorised alterations and errors

is enabled by

a management system which provides for the analysis, implementation and follow-up of all changes requested and made to the existing IT infrastructure

and takes into consideration

- identification of changes
- categorisation, prioritisation and emergency procedures
- impact assessment
- change authorisation
- release management
- software distribution
- use of automated tools
- configuration management
- business process re-design

DETAILED CONTROL OBJECTIVES

6 **MANAGE CHANGES**

6.1 **Change Request Initiation and Control**

CONTROL OBJECTIVE

IT management should ensure that all requests for changes, system maintenance and supplier maintenance are standardised and are subject to formal change management procedures. Changes should be categorised and prioritised and specific procedures should be in place to handle urgent matters. Change requestors should be kept informed about the status of their request.

6.2 **Impact Assessment**

CONTROL OBJECTIVE

A procedure should be in place to ensure that all requests for change are assessed in a structured way for all possible impacts on the operational system and its functionality.

6.3 **Control of Changes**

CONTROL OBJECTIVE

IT management should ensure that change management and software control and distribution are properly integrated with a comprehensive configuration management system. The system used to monitor changes to application systems should be automated to support the recording and tracking of changes made to large, complex information systems.

6.4 **Emergency Changes**

CONTROL OBJECTIVE

IT management should establish parameters defining emergency changes and procedures to control these changes when they circumvent the normal process of technical, operational and management assessment prior to implementation. The emergency changes should be recorded and authorised by IT management prior to implementation.

6.5 **Documentation and Procedures**

CONTROL OBJECTIVE

The change process should ensure that whenever system changes are implemented, the associated documentation and procedures are updated accordingly.

6.6 **Authorised Maintenance**

CONTROL OBJECTIVE

IT management should ensure maintenance personnel have specific assignments and that their work is properly monitored. In addition, their system access rights should be controlled to avoid risks of unauthorised access to automated systems.

6.7 **Software Release Policy**

CONTROL OBJECTIVE

IT management should ensure that the release of software is governed by formal procedures ensuring sign-off, packaging, regression testing, handover, etc.

6.8 **Distribution of Software**

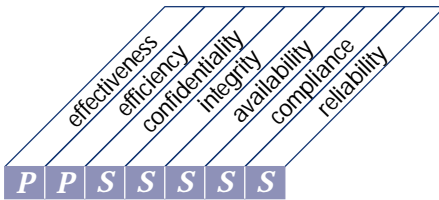

CONTROL OBJECTIVE

Specific internal control measures should be established to ensure distribution of the correct software element to the right place, with integrity, and in a timely manner with adequate audit trails.

This page intentionally left blank

DELIVERY & SUPPORT

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
defining and managing service levels

that satisfies the business requirement

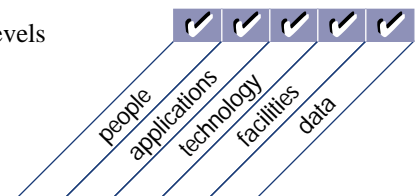

to establish a common understanding of the level of service required

is enabled by

the establishment of service-level agreements which formalise the performance criteria against which the quantity and quality of service will be measured

and takes into consideration

- formal agreements
- definition of responsibilities
- response times and volumes
- charging
- integrity guarantees
- non-disclosure agreements
- customer satisfaction criteria
- cost/benefit analysis of required service levels
- monitoring and reporting

DETAILED CONTROL OBJECTIVES

1 DEFINE AND MANAGE SERVICE LEVELS

1.1 Service Level Agreement Framework

CONTROL OBJECTIVE

Management should define a framework wherein it promotes the definition of formal service level agreements and defines the minimal contents: availability, reliability, performance, capacity for growth, levels of support provided to users, continuity planning, security, minimum acceptable level of satisfactorily delivered system functionality, restrictions (limits on the amount of work), service charges, central print facilities (availability), central print distribution and change procedures. Users and the IT function should have a written agreement which describes the service level in qualitative and quantitative terms. The agreement defines the responsibilities of both parties. The IT function must offer the agreed quality and quantity of service and the users must constrain the demands they place upon the service within the agreed limits.

1.2 Aspects of Service Level Agreements

CONTROL OBJECTIVE

Explicit agreement should be reached on the aspects that a service level agreement should have. The service level agreement should cover at least the following aspects: availability, reliability, performance, capacity for growth, levels of support provided to users, continuity planning, security, minimum acceptable level of satisfactorily delivered system functionality, restrictions (limits on the amount of work), service charges, central print facilities (availability), central print distribution and change procedures.

1.3 Performance Procedures

CONTROL OBJECTIVE

Procedures should be put in place to ensure that the manner of and responsibilities for performance governing relations (e.g., non-disclosure agreements) between all the involved parties are established, coordinated, maintained and communicated to all affected departments.

1.4 Monitoring and Reporting

CONTROL OBJECTIVE

Management should appoint a service level manager who is responsible for monitoring and reporting on the achievement of the specified service performance criteria and all problems encountered during processing. The monitoring statistics should be analysed on a timely basis. Appropriate corrective action should be taken and failures should be investigated.

1.5 Review of Service Level Agreements and Contracts

CONTROL OBJECTIVE

Management should implement a regular review process for service level agreements and underpinning contracts with third-party service providers.

1.6 Chargeable Items

CONTROL OBJECTIVE

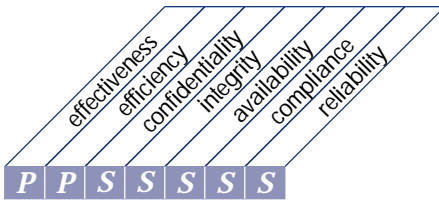

Provisions for chargeable items should be included in the service level agreements to make trade-offs possible on service levels versus costs.

1.7 Service Improvement Programme

CONTROL OBJECTIVE

Management should implement a process to ensure that users and service level managers regularly agree on a service improvement programme for pursuing cost-justified improvements to the service level.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing third-party services

that satisfies the business requirement

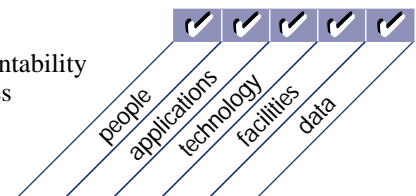

to ensure that roles and responsibilities of third parties are clearly defined, adhered to and continue to satisfy requirements

is enabled by

control measures aimed at the review and monitoring of existing agreements and procedures for their effectiveness and compliance with organisation policy

and takes into consideration

- third-party service agreements
- contract management
- non-disclosure agreements
- legal and regulatory requirements
- service delivery monitoring and reporting
- enterprise and IT risk assessments
- performance rewards and penalties
- internal and external organisational accountability
- analysis of cost and service level variances

DETAILED CONTROL OBJECTIVES

2 **MANAGE THIRD-PARTY SERVICES**

2.1 **Supplier Interfaces**

CONTROL OBJECTIVE

Management should ensure that all third-party providers' services are properly identified and that the technical and organisational interfaces with suppliers are documented.

2.2 **Owner Relationships**

CONTROL OBJECTIVE

The customer organisation management should appoint a relationship owner who is responsible for ensuring the quality of the relationships with third-parties.

2.3 **Third-Party Contracts**

CONTROL OBJECTIVE

Management should define specific procedures to ensure that for each relationship with a third-party service provider a formal contract is defined and agreed upon before work starts.

2.4 **Third-Party Qualifications**

CONTROL OBJECTIVE

Management should ensure that, before selection, potential third-parties are properly qualified through an assessment of their capability to deliver the required service (due diligence).

2.5 **Outsourcing Contracts**

CONTROL OBJECTIVE

Specific organisational procedures should be defined to ensure that the contract between the facilities management provider and the organisation is based on required processing levels, security, monitoring and contingency requirements, and other stipulations as appropriate.

2.6 **Continuity of Services**

CONTROL OBJECTIVE

With respect to ensuring continuity of services, management should consider business risk related to the third-party in terms of legal uncertainties and the going concern concept, and negotiate escrow contracts where appropriate.

2.7 **Security Relationships**

CONTROL OBJECTIVE

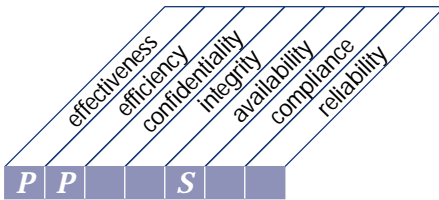

With regard to relationships with third-party service providers, management should ensure that security agreements (e.g., non-disclosure agreements) are identified and explicitly stated and agreed to, and conform to universal business standards in accordance with legal and regulatory requirements, including liabilities.

2.8 **Monitoring**

CONTROL OBJECTIVE

A process for monitoring of the service delivery of the third-party should be set up by management to ensure the continuing adherence to the contract agreements.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing performance and capacity

that satisfies the business requirement

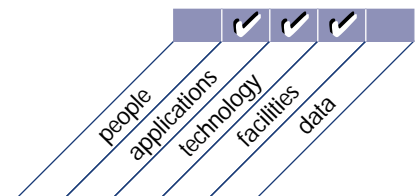

to ensure that adequate capacity is available and that best and optimal use is made of it to meet required performance needs

is enabled by

data collection, analysis and reporting on resource performance,
application sizing and workload demand

and takes into consideration

- availability and performance requirements
- automated monitoring and reporting
- modeling tools
- capacity management
- resource availability
- hardware and software price/performance changes

DETAILED CONTROL OBJECTIVES

3 MANAGE PERFORMANCE AND CAPACITY

3.1 Availability and Performance Requirements

CONTROL OBJECTIVE

The management process should ensure that business needs are identified regarding availability and performance of information services and converted into availability terms and requirements.

3.2 Availability Plan

CONTROL OBJECTIVE

Management should ensure the establishment of an availability plan to achieve, monitor and control the availability of information services.

3.3 Monitoring and Reporting

CONTROL OBJECTIVE

Management should implement a process to ensure that the performance of IT resources is continuously monitored and exceptions are reported in a timely and comprehensive manner.

3.4 Modeling Tools

CONTROL OBJECTIVE

IT management should ensure that appropriate modeling tools are used to produce a model of the current system which has been calibrated and adjusted against actual workload and is accurate within recommended load levels. Modeling tools should be used to assist with the prediction of capacity, configuration reliability, performance and availability requirements. In-depth technical investigations should be conducted on systems hardware and should include forecasts concerning future technologies.

3.5 Proactive Performance Management

CONTROL OBJECTIVE

The performance management process should include forecasting capability to enable problems to be corrected before they affect system performance. Analysis should be conducted on system failures and irregularities pertaining to frequency, degree of impact and amount of damage.

3.6 Workload Forecasting

CONTROL OBJECTIVE

Controls are to be in place to ensure that workload forecasts are prepared to identify trends and to provide information needed for the capacity plan.

3.7 Capacity Management of Resources

CONTROL OBJECTIVE

IT management should establish a planning process for the review of hardware performance and capacity to ensure that cost-justifiable capacity always exists to process the agreed workloads and to provide the required performance quality and quantity prescribed in service level agreements. The capacity plan should cover multiple scenarios.

3.8 Resources Availability

CONTROL OBJECTIVE

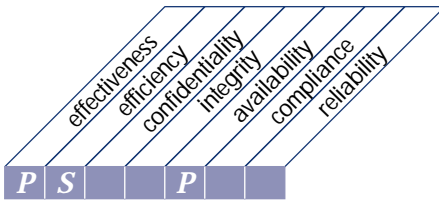

When identified as availability requirements, management should prevent resources from being unavailable by implementing fault tolerance mechanisms, prioritising tasks and equitable resource allocation mechanisms.

3.9 Resources Schedule

CONTROL OBJECTIVE

Management should ensure the timely acquisition of required capacity, taking into account aspects such as resilience, contingency, workloads and storage plans.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

ensuring continuous service

that satisfies the business requirement

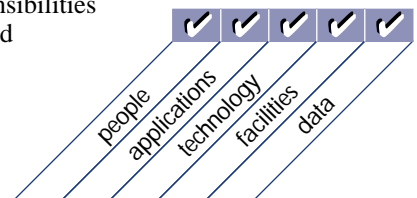

to make sure IT services are available as required and to ensure a minimum business impact in the event of a major disruption

is enabled by

having an operational and tested IT continuity plan which is in line with the overall business continuity plan and its related business requirements

and takes into consideration

- criticality classification
- alternative procedures
- back-up and recovery
- systematic and regular testing and training
- monitoring and escalation processes
- internal and external organisational responsibilities
- business continuity activation, fallback and resumption plans
- risk management activities
- assessment of single points of failure
- problem management

Planning &
Organisation

Acquisition &
Implementation

Delivery &
Support

Monitoring

DETAILED CONTROL OBJECTIVES

4 ENSURE CONTINUOUS SERVICE

4.1 IT Continuity Framework

CONTROL OBJECTIVE

IT management, in cooperation with business process owners, should establish a continuity framework which defines the roles, responsibilities and the risk-based approach/methodology to be adopted, and the rules and structures to document the continuity plan as well as the approval procedures.

4.2 IT Continuity Plan Strategy and Philosophy

CONTROL OBJECTIVE

Management should ensure that the IT continuity plan is in line with the overall business continuity plan to ensure consistency. Furthermore, the IT continuity plan should take into account the IT long- and short-range plans to ensure consistency.

4.3 IT Continuity Plan Contents

CONTROL OBJECTIVE

IT management should ensure that a written plan is developed containing the following:

- Guidelines on how to use the continuity plan
- Emergency procedures to ensure the safety of all affected staff members
- Response procedures meant to bring the business back to the state it was in before the incident or disaster
- Recovery procedures meant to bring the business back to the state it was in before the incident or disaster
- Procedures to safeguard and reconstruct the home site
- Co-ordination procedures with public authorities
- Communication procedures with stakeholders, employees, key customers, critical suppliers, stockholders and management
- Critical information on continuity teams, affected staff, customers, suppliers, public authorities and media

4.4 Minimising IT Continuity Requirements

CONTROL OBJECTIVE

IT management should establish procedures and guidelines for minimising the continuity requirements with regard to personnel, facilities, hardware, software, equipment, forms, supplies and furniture.

4.5 Maintaining the IT Continuity Plan

CONTROL OBJECTIVE

IT management should provide for change control procedures in order to ensure that the continuity plan is up-to-date and reflects actual business requirements. This requires continuity plan maintenance procedures aligned with change and management and human resources procedures.

4.6 Testing the IT Continuity Plan

CONTROL OBJECTIVE

To have an effective continuity plan, management needs to assess its adequacy on a regular basis or upon major changes to the business or IT infrastructure; this requires careful preparation, documentation, reporting test results and, according to the results, implementing an action plan.

4.7 IT Continuity Plan Training

CONTROL OBJECTIVE

The disaster continuity methodology should ensure that all concerned parties receive regular training sessions regarding the procedures to be followed in case of an incident or disaster.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

4.8 IT Continuity Plan Distribution

CONTROL OBJECTIVE

Given the sensitive nature of information in the continuity plan, the latter should be distributed only to authorised personnel and should be safeguarded against unauthorised disclosure. Consequently, sections of the plan need to be distributed on a need-to-know basis.

4.9 User Department Alternative Processing Back-up Procedures

CONTROL OBJECTIVE

The continuity methodology should ensure that the user departments establish alternative processing procedures that may be used until the IT function is able to fully restore its services after a disaster or an event.

4.10 Critical IT Resources

CONTROL OBJECTIVE

The continuity plan should identify the critical application programmes, third-party services, operating systems, personnel and supplies, data files and time frames needed for recovery after a disaster occurs. Critical data and operations should be identified, documented, prioritised and approved by the business process owners, in cooperation with IT management.

4.11 Back-up Site and Hardware

CONTROL OBJECTIVE

Management should ensure that the continuity methodology incorporates an identification of alternatives regarding the back-up site and hardware as well as a final alternative selection. If applicable, a formal contract for these type of services should be concluded.

4.12 Off-site Back-up Storage

CONTROL OBJECTIVE

Off-site storage of critical back-up media, documentation and other IT resources should be established to support recovery and business continuity plans. Business process owners and IT function personnel should be involved in determining what back-up resources need to be stored off-site. The off-site storage facility should be environmentally appropriate to the media and other resources stored and should have a level of security commensurate with that needed to protect the back-up resources from unauthorised access, theft or damage. IT management should ensure that off-site arrangements are periodically assessed, at least annually, for content, environmental protection and security.

4.13 Wrap-up Procedures

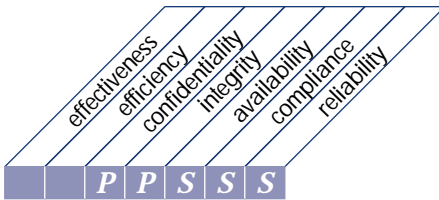

CONTROL OBJECTIVE

On successful resumption of the IT function after a disaster, IT management should establish procedures for assessing the adequacy of the plan and update the plan accordingly.

CONTROL OBJECTIVES

This page intentionally left blank

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

ensuring systems security

that satisfies the business requirement

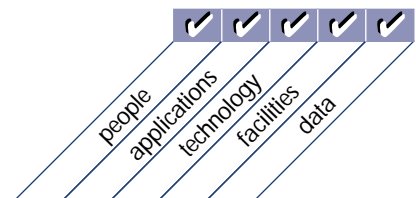

to safeguard information against unauthorised use, disclosure or modification, damage or loss

is enabled by

logical access controls which ensure that access to systems, data and programmes is restricted to authorised users

and takes into consideration

- confidentiality and privacy requirements
- authorisation, authentication and access control
- user identification and authorisation profiles
- need-to-have and need-to-know
- cryptographic key management
- incident handling, reporting and follow-up
- virus prevention and detection
- firewalls
- centralised security administration
- user training
- tools for monitoring compliance, intrusion testing and reporting

Planning & Organisation

Acquisition & Implementation

Delivery & Support

Monitoring

DETAILED CONTROL OBJECTIVES

5 ENSURE SYSTEMS SECURITY

5.1 Manage Security Measures

CONTROL OBJECTIVE

IT security should be managed such that security measures are in line with business requirements. This includes:

- Translating risk assessment information to the IT security plans
- Implementing the IT security plan
- Updating the IT security plan to reflect changes in the IT configuration
- Assessing the impact of change requests on IT security
- Monitoring the implementation of the IT security plan
- Aligning IT security procedures to other policies and procedures

5.2 Identification, Authentication and Access

CONTROL OBJECTIVE

The logical access to and use of IT computing resources should be restricted by the implementation of adequate identification, authentication and authorisation mechanisms, linking users and resources with access rules. Such mechanisms should prevent unauthorised personnel, dial-up connections and other system (network) entry ports from accessing computer resources and minimise the need for authorised users to use multiple sign-ons. Procedures should also be in place to keep authentication and access mechanisms effective (e.g., regular password changes).

5.3 Security of Online Access to Data

CONTROL OBJECTIVE

In an online IT environment, IT management should implement procedures in line with the security policy that provides access security control based on the individual's demonstrated need to view, add, change or delete data.

5.4 User Account Management

CONTROL OBJECTIVE

Management should establish procedures to ensure timely action relating to requesting, establishing, issuing, suspending and closing of user accounts. A formal approval procedure outlining the data or system owner granting the access privileges should be included. The security of third-party access should be defined contractually and address administration and non-disclosure requirements. Outsourcing arrangements should address the risks, security controls and procedures for information systems and networks in the contract between the parties.

5.5 Management Review of User Accounts

CONTROL OBJECTIVE

Management should have a control process in place to review and confirm access rights periodically. Periodic comparison of resources with recorded accountability should be made to help reduce the risk of errors, fraud, misuse or unauthorised alteration.

5.6 User Control of User Accounts

CONTROL OBJECTIVE

Users should systematically control the activity of their proper account(s). Also information mechanisms should be in place to allow them to oversee normal activity as well as to be alerted to unusual activity in a timely manner.

5.7 Security Surveillance

CONTROL OBJECTIVE

IT security administration should ensure that security activity is logged and any indication of imminent security violation is reported immediately to all who may be concerned, internally and externally, and is acted upon in a timely manner.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

5.8 Data Classification

CONTROL OBJECTIVE

Management should implement procedures to ensure that all data are classified in terms of sensitivity by a formal and explicit decision by the data owner according to the data classification scheme. Even data needing “no protection” should require a formal decision to be so designated. Owners should determine disposition and sharing of data, as well as whether and when programs and files are to be maintained, archived or deleted. Evidence of owner approval and data disposition should be maintained. Policies should be defined to support reclassification of information, based on changing sensitivities. The classification scheme should include criteria for managing exchanges of information between organisations, addressing both security and compliance with relevant legislation.

5.9 Central Identification and Access Rights Management

CONTROL OBJECTIVE

Controls are in place to ensure that the identification and access rights of users as well as the identity of system and data ownership are established and managed in a unique and central manner to obtain consistency and efficiency of global access control.

5.10 Violation and Security Activity Reports

CONTROL OBJECTIVE

IT security administration should ensure that violation and security activity is logged, reported, reviewed and appropriately escalated on a regular basis to identify and resolve incidents involving unauthorised activity. The logical access to the computer resources accountability information (security and other logs) should be granted based upon the principle of least privilege, or need-to-know.

5.11 Incident Handling

CONTROL OBJECTIVE

Management should establish a computer security incident handling capability to address security incidents by providing a centralised platform with sufficient expertise and equipped with rapid and secure communication facilities. Incident management responsibilities and procedures should be established to ensure an appropriate, effective and timely response to security incidents.

5.12 Reaccreditation

CONTROL OBJECTIVE

Management should ensure that reaccreditation of security (e.g., through “tiger teams”) is periodically performed to keep up-to-date the formally approved security level and the acceptance of residual risk.

5.13 Counterparty Trust

CONTROL OBJECTIVE

Organisational policy should ensure that control practices are implemented to verify the authenticity of the counterparty providing electronic instructions or transactions. This can be implemented through trusted exchange of passwords, tokens or cryptographic keys.

5.14 Transaction Authorisation

CONTROL OBJECTIVE

Organisational policy should ensure that, where appropriate, controls are implemented to provide authenticity of transactions and establish the validity of a user’s claimed identity to the system. This requires use of cryptographic techniques for signing and verifying transactions.

5.15 Non-Repudiation

CONTROL OBJECTIVE

Organisational policy should ensure that, where appropriate, transactions cannot be denied by either party, and controls are implemented to provide non-repudiation of origin or receipt, proof of submission, and receipt of transactions. This can be implemented through digital signatures, time stamping and trusted third-parties, with appropriate policies that take into account relevant regulatory requirements.

5.16 Trusted Path

CONTROL OBJECTIVE

Organisational policy should ensure that sensitive transaction data is only exchanged over a trusted path. Sensitive information includes security management information, sensitive transaction data, passwords and cryptographic keys. To achieve this, trusted channels may need to be established using encryption between users, between users and systems, and between systems.

5.17 Protection of Security Functions

CONTROL OBJECTIVE

All security related hardware and software should at all times be protected against tampering to maintain their integrity and against disclosure of secret keys. In addition, organisations should keep a low profile about their security design, but should not base their security on the design being secret.

5.18 Cryptographic Key Management

CONTROL OBJECTIVE

Management should define and implement procedures and protocols to be used for generation, change, revocation, destruction, distribution, certification, storage, entry, use and archiving of cryptographic keys to ensure the protection of keys against modification and unauthorised dis-

closure. If a key is compromised, management should ensure this information is propagated to any interested party through the use of Certificate Revocation Lists or similar mechanisms.

5.19 Malicious Software Prevention, Detection and Correction

CONTROL OBJECTIVE

Regarding malicious software, such as computer viruses or trojan horses, management should establish a framework of adequate preventative, detective and corrective control measures, and occurrence response and reporting. Business and IT management should ensure that procedures are established across the organisation to protect information systems and technology from computer viruses. Procedures should incorporate virus protection, detection, occurrence response and reporting.

5.20 Firewall Architectures and Connections with Public Networks

CONTROL OBJECTIVE

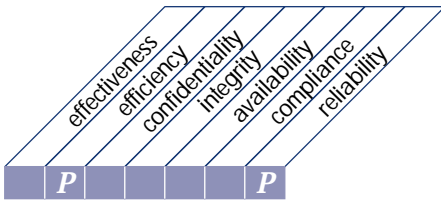

If connection to the Internet or other public networks exists, adequate firewalls should be operative to protect against denial of services and any unauthorised access to the internal resources; should control any application and infrastructure management flows in both directions; and should protect against denial of service attacks.

5.21 Protection of Electronic Value

CONTROL OBJECTIVE

Management should protect the continued integrity of all cards or similar physical mechanisms used for authentication or storage of financial or other sensitive information, taking into consideration the related facilities, devices, employees and validation methods used.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
identifying and allocating costs

that satisfies the business requirement

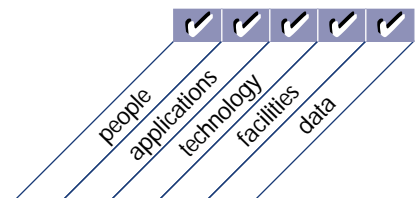

to ensure a correct awareness of the costs attributable to IT services

is enabled by

a cost accounting system which ensures that costs are recorded,
calculated and allocated to the required level of detail and to the
appropriate service offering

and takes into consideration

- resources identifiable and measurable
- charging policies and procedures
- charge rates and charge-back process
- linkage to service level agreement
- automated reporting
- verification of benefit realisation
- external benchmarking

Planning &
Organisation

Acquisition &
Implementation

**Delivery &
Support**

Monitoring

DETAILED CONTROL OBJECTIVES

6 IDENTIFY AND ALLOCATE COSTS**6.1 Chargeable Items***CONTROL OBJECTIVE*

IT management, with guidance from senior management, should ensure that chargeable items are identifiable, measurable and predictable by users. Users should be able to control the use of information services and associated billing levels.

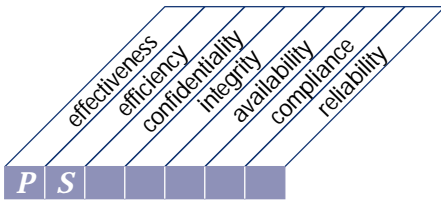

6.2 Costing Procedures*CONTROL OBJECTIVE*

IT management should define and implement costing procedures to provide management information on the costs of delivering information services while ensuring cost effectiveness. Variances between forecasts and actual costs are to be adequately analysed and reported on to facilitate the cost monitoring. In addition, management should periodically evaluate the results of the IT function's job cost accounting procedures, in light of the organisation's other financial measurement systems.

6.3 User Billing and Chargeback Procedures*CONTROL OBJECTIVE*

IT management should define and use billing and chargeback procedures. It should maintain user billing and chargeback procedures that encourage the proper usage of computer resources and assure the fair treatment of user departments and their needs. The rate charged should reflect the associated costs of providing services.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
educating and training users

that satisfies the business requirement

to ensure that users are making effective use of technology and are aware of the risks and responsibilities involved

is enabled by

a comprehensive training and development plan

and takes into consideration

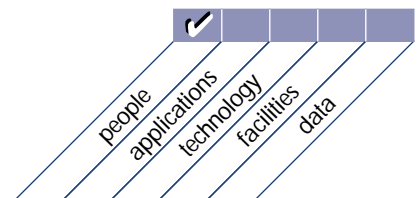

- training curriculum
- skills inventory
- awareness campaigns
- awareness techniques
- use of new training technologies and methods
- personnel productivity
- development of knowledge base

Planning & Organisation

Acquisition & Implementation

Delivery & Support

Monitoring

DETAILED CONTROL OBJECTIVES

7 EDUCATE AND TRAIN USERS

7.1 Identification of Training Needs

CONTROL OBJECTIVE

In line with the long-range plan, management should establish and maintain procedures for identifying and documenting the training needs of all personnel using information services. A training curriculum for each group of employees should be established.

7.2 Training Organisation

CONTROL OBJECTIVE

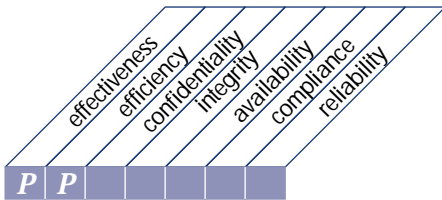

Based on the identified needs, management should define the target groups, identify and appoint trainers, and organise timely training sessions. Training alternatives should also be investigated (internal or external location, in-house trainers or third-party trainers, etc.).

7.3 Security Principles and Awareness Training

CONTROL OBJECTIVE

All personnel must be trained and educated in system security principles, including periodic updates with special focus on security awareness and incident handling. Management should provide an education and training programme that includes: ethical conduct of the IT function, security practices to protect against harm from failures affecting availability, confidentiality, integrity and performance of duties in a secure manner.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

assisting and advising customers

that satisfies the business requirement

to ensure that any problem experienced by the user is appropriately resolved

is enabled by

a help desk facility which provides first-line support and advice

and takes into consideration

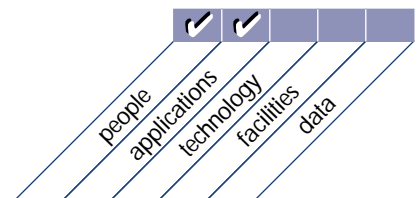

- customer query and problem response
- query monitoring and clearance
- trend analysis and reporting
- development of knowledge base
- root cause analysis
- problem tracking and escalation

Planning &
Organisation

Acquisition &
Implementation

**Delivery &
Support**

Monitoring

DETAILED CONTROL OBJECTIVES

8 ASSIST AND ADVISE CUSTOMERS

8.1 Help Desk

CONTROL OBJECTIVE

User support should be established within a “help desk” function. Individuals responsible for performing this function should closely interact with problem management personnel.

8.2 Registration of Customer Queries

CONTROL OBJECTIVE

Procedures should be in place to ensure that all customer queries are adequately registered by the help desk.

8.3 Customer Query Escalation

CONTROL OBJECTIVE

Help desk procedures should ensure that customer queries which cannot immediately be resolved are appropriately escalated within the IT function.

8.4 Monitoring of Clearance

CONTROL OBJECTIVE

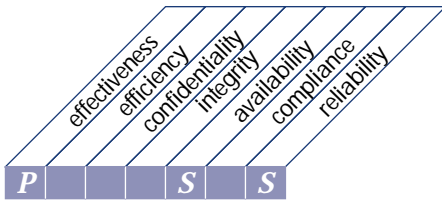

Management should establish procedures for timely monitoring of the clearance of customer queries. Long outstanding queries should be investigated and acted upon.

8.5 Trend Analysis and Reporting

CONTROL OBJECTIVE

Procedures should be in place which assure adequate reporting with regard to customer queries and resolution, response times and trend identification. The reports should be adequately analysed and acted upon.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing the configuration

that satisfies the business requirement

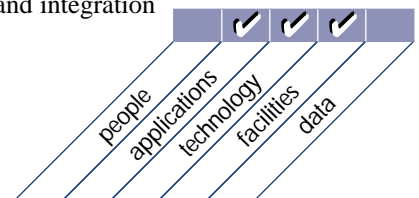

to account for all IT components, prevent unauthorised alterations, verify physical existence and provide a basis for sound change management

is enabled by

controls which identify and record all IT assets and their physical location, and a regular verification programme which confirms their existence

and takes into consideration

- asset tracking
- configuration change management
- checking for unauthorised software
- software storage controls
- software and hardware interrelationships and integration
- use of automated tools

Planning &
Organisation

Acquisition &
Implementation

Delivery &
Support

Monitoring

DETAILED CONTROL OBJECTIVES

9 MANAGE THE CONFIGURATION

9.1 Configuration Recording

CONTROL OBJECTIVE

Procedures should be in place to ensure that only authorised and identifiable configuration items are recorded in inventory upon acquisition. These procedures should also provide for the authorised disposal and consequential sale of configuration items. Moreover, procedures should be in place to keep track of changes to the configuration (e.g., new item, status change from development to prototype). Logging and control should be an integrated part of the configuration recording system including reviews of changed records.

9.2 Configuration Baseline

CONTROL OBJECTIVE

IT management should be ensured that a baseline of configuration items is kept as a checkpoint to return to after changes.

9.3 Status Accounting

CONTROL OBJECTIVE

IT management should ensure that the configuration records reflect the actual status of all configuration items including the history of changes.

9.4 Configuration Control

CONTROL OBJECTIVE

Procedures should ensure that the existence and consistency of recording of the IT configuration is periodically checked.

9.5 Unauthorised Software

CONTROL OBJECTIVE

Clear policies restricting the use of personal and unlicensed software should be developed and enforced. The organisation should use virus detection and remedy software. Business and IT management should periodically check the

organisation's personal computers for unauthorised software. Compliance with the requirements of software and hardware license agreements should be reviewed on a periodic basis.

9.6 Software Storage

CONTROL OBJECTIVE

A file storage area (library) should be defined for all valid software items in appropriate phases of the system development life cycle. These areas should be separated from each other and from development, testing and production file storage areas.

9.7 Configuration Management Procedures

CONTROL OBJECTIVE

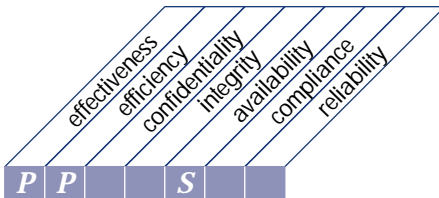

Configuration management procedures should be established to ensure that critical components of the organisation's IT resources have been appropriately identified and are maintained. There should be an integrated process whereby current and future processing demands are measured and provide input to the IT resource acquisitions process.

9.8 Software Accountability

CONTROL OBJECTIVE

Software should be labeled, inventoried and properly licensed. Library management software should be used to produce audit trails of program changes and to maintain program version numbers, creation-date information and copies of previous versions.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing problems and incidents

that satisfies the business requirement

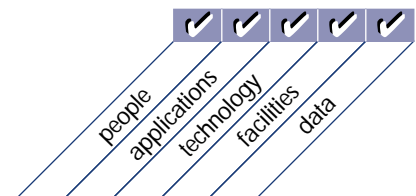

to ensure that problems and incidents are resolved, and the cause investigated to prevent any recurrence

is enabled by

a problem management system which records and progresses all incidents

and takes into consideration

- audit trails of problems and solutions
- timely resolution of reported problems
- escalation procedures
- incident reports
- accessibility of configuration information
- supplier responsibilities
- coordination with change management

DETAILED CONTROL OBJECTIVES

10 MANAGE PROBLEMS AND INCIDENTS**10.1 Problem Management System***CONTROL OBJECTIVE*

IT management should define and implement a problem management system to ensure that all operational events which are not part of the standard operation (incidents, problems and errors) are recorded, analysed and resolved in a timely manner. Emergency programme change procedures should be promptly tested, documented, approved and reported. Incident reports should be established in the case of significant problems.

10.2 Problem Escalation*CONTROL OBJECTIVE*

IT management should define and implement problem escalation procedures to ensure that identified problems are solved in the most efficient way on a timely basis. These procedures should ensure that these priorities are appropriately set. The procedures should also document the escalation process for the activation of the IT continuity plan.

10.3 Problem Tracking and Audit Trail*CONTROL OBJECTIVE*

The problem management system should provide for adequate audit trail facilities which allow tracing from incident to underlying cause (e.g., package release or urgent change implementation) and back. It should closely interwork with change management, availability management and configuration management.

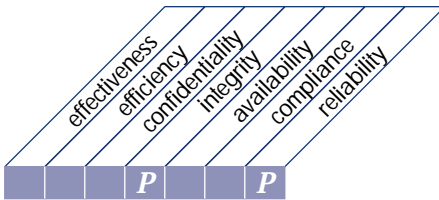

10.4 Emergency and Temporary Access Authorisations*CONTROL OBJECTIVE*

Emergency and temporary access authorisations should be documented on standard forms and maintained on file, approved by appropriate managers, securely communicated to the security function and automatically terminated after a predetermined period.

10.5 Emergency Processing Priorities*CONTROL OBJECTIVE*

Emergency processing priorities should be established, documented and approved by appropriate program and IT management.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing data

that satisfies the business requirement

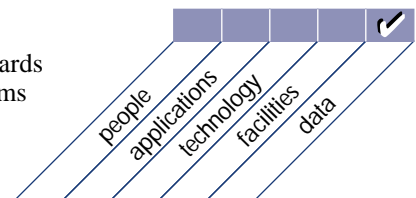

to ensure that data remains complete, accurate and valid during its
input, update and storage

is enabled by

an effective combination of application and general controls over the
IT operations

and takes into consideration

- form design
- source document controls
- input, processing and output controls
- media identification, movement and library management
- data back-up and recovery
- authentication and integrity
- data ownership
- data administration policies
- data models and data representation standards
- integration and consistency across platforms
- legal and regulatory requirements

DETAILED CONTROL OBJECTIVES

11 MANAGE DATA**11.1 Data Preparation Procedures***CONTROL OBJECTIVE*

Management should establish data preparation procedures to be followed by user departments. In this context, input form design should help to assure that errors and omissions are minimised. Error handling procedures during data origination should reasonably ensure that errors and irregularities are detected, reported and corrected.

11.2 Source Document Authorisation Procedures*CONTROL OBJECTIVE*

Management should ensure that source documents are properly prepared by authorised personnel who are acting within their authority and that an adequate segregation of duties is in place regarding the origination and approval of source documents.

11.3 Source Document Data Collection*CONTROL OBJECTIVE*

The organisation's procedures should ensure that all authorised source documents are complete and accurate, properly accounted for and transmitted in a timely manner for entry.

11.4 Source Document Error Handling*CONTROL OBJECTIVE*

Error handling procedures during data origination should reasonably ensure that errors and irregularities are detected, reported and corrected.

11.5 Source Document Retention*CONTROL OBJECTIVE*

Procedures should be in place to ensure original source documents are retained or are reproducible by the organisation for an adequate amount of time to facilitate retrieval or reconstruction of data as well as to satisfy legal requirements.

11.6 Data Input Authorisation Procedures*CONTROL OBJECTIVE*

The organisation should establish appropriate procedures to ensure that data input is performed only by authorised staff.

11.7 Accuracy, Completeness and Authorisation Checks*CONTROL OBJECTIVE*

Transaction data entered for processing (people-generated, system-generated or interfaced inputs) should be subject to a variety of controls to check for accuracy, completeness and validity. Procedures should also be established to assure that input data is validated and edited as close to the point of origination as possible.

11.8 Data Input Error Handling*CONTROL OBJECTIVE*

The organisation should establish procedures for the correction and resubmission of data which was erroneously input.

11.9 Data Processing Integrity*CONTROL OBJECTIVE*

The organisation should establish procedures for the processing of data that ensure separation of duties is maintained and that work performed is routinely verified. The procedures should ensure adequate update controls such as run-to-run control totals and master file update controls are in place.

11.10 Data Processing Validation and Editing*CONTROL OBJECTIVE*

The organisation should establish procedures to ensure that data processing validation, authentication and editing are performed as close to the point of origination as possible. When using Artificial Intelligence systems, these systems should be placed in an interactive control framework with human operators to ensure that vital decisions are approved.

continued on next page

DETAILED CONTROL OBJECTIVES *continued***11.11 Data Processing Error Handling***CONTROL OBJECTIVE*

The organisation should establish data processing error handling procedures that enable erroneous transactions to be identified without being processed and without undue disruption of the processing of other valid transactions.

11.12 Output Handling and Retention*CONTROL OBJECTIVE*

The organisation should establish procedures for the handling and retention of output from its IT application programs. In case negotiable instruments (e.g., value cards) are the output recipients, special care should be taken to prevent misuse.

11.13 Output Distribution*CONTROL OBJECTIVE*

The organisation should establish and communicate written procedures for the distribution of IT output.

11.14 Output Balancing and Reconciliation*CONTROL OBJECTIVE*

The organisation should establish procedures for assuring that output routinely is balanced to the relevant control totals. Audit trails should be provided to facilitate the tracing of transaction processing and the reconciliation of disrupted data.

11.15 Output Review and Error Handling*CONTROL OBJECTIVE*

The organisation's management should establish procedures for assuring that the accuracy of output reports is reviewed by the provider and the relevant users. Procedures should also be in place for controlling errors contained in the output.

11.16 Security Provision for Output Reports*CONTROL OBJECTIVE*

The organisation should establish procedures for assuring that the security of output reports is maintained for those awaiting distribution, as well as those already distributed to users.

11.17 Protection of Sensitive Information During Transmission and Transport*CONTROL OBJECTIVE*

Management should ensure that adequate protection of sensitive information is provided during transmission and transport against unauthorised access, modification and misaddressing.

11.18 Protection of Disposed Sensitive Information*CONTROL OBJECTIVE*

Management should define and implement procedures to prevent access to sensitive information and software from computers, disks and other equipment or media when they are disposed of or transferred to another use. Such procedures should guarantee that data marked as deleted or to be disposed cannot be retrieved by any internal or third party.

11.19 Storage Management*CONTROL OBJECTIVE*

Procedures should be developed for data storage which consider retrieval requirements, and cost effectiveness and security policy.

11.20 Retention Periods and Storage Terms*CONTROL OBJECTIVE*

Retention periods and storage terms should be defined for documents, data, programmes and reports and messages (incoming and outgoing) as well as the data (keys, certificates) used for their encryption and authentication.

11.21 Media Library Management System

CONTROL OBJECTIVE

The IT function should establish procedures to assure that contents of its media library containing data are inventoried systematically, that any discrepancies disclosed by a physical inventory are remedied in a timely fashion and that measures are taken to maintain the integrity of magnetic media stored in the library.

11.22 Media Library Management Responsibilities

CONTROL OBJECTIVE

Housekeeping procedures designed to protect media library contents should be established by IT management. Standards should be defined for the external identification of magnetic media and the control of their physical movement and storage to support accountability. Responsibilities for media (magnetic tape, cartridge, disks and diskettes) library management should be assigned to specific members of the IT function.

11.23 Back-up and Restoration

CONTROL OBJECTIVE

Management should implement a proper strategy for back-up and restoration to ensure that it includes a review of business requirements, as well as the development, implementation, testing and documentation of the recovery plan. Procedures should be set up to ensure that back-ups are satisfying the above-mentioned requirements.

11.24 Back-up Jobs

CONTROL OBJECTIVE

Procedures should be in place to ensure back-ups are taken in accordance with the defined back-up strategy and the usability of back-ups is regularly verified.

11.25 Back-up Storage

CONTROL OBJECTIVE

Back-up procedures for IT-related media should include the proper storage of the data files, software and related documentation, both on-site and off-site. Back-ups should be stored securely and the storage sites periodically reviewed regarding physical access security and security of data files and other items.

11.26 Archiving

CONTROL OBJECTIVE

Management should implement a policy and procedures for ensuring that archival meets legal and business requirements, and is properly safeguarded and accounted for.

11.27 Protection of Sensitive Messages

CONTROL OBJECTIVE

Regarding data transmission over the Internet or any other public network, management should define and implement procedures and protocols to be used to ensure integrity, confidentiality and non-repudiation of sensitive messages.

11.28 Authentication and Integrity

CONTROL OBJECTIVE

The authentication and integrity of information originated outside the organisation, whether received by telephone, voicemail, paper document, fax or e-mail, should be appropriately checked before potentially critical action is taken.

continued on next page

DETAILED CONTROL OBJECTIVES *continued***11.29 Electronic Transaction Integrity***CONTROL OBJECTIVE*

Taking into consideration that the traditional boundaries of time and geography are less reliant, management should define and implement appropriate procedures and practices for sensitive and critical electronic transactions ensuring integrity and authenticity of:

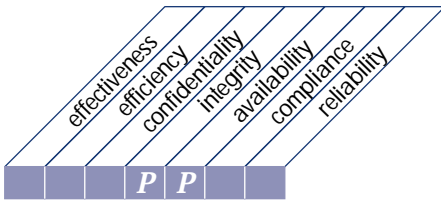

- atomicity (indivisible unit of work, all of its actions succeed or they all fail)
- consistency (if the transaction cannot achieve a stable end state, it must return the system to its initial state)
- isolation (a transaction's behavior is not affected by other transactions that execute concurrently)
- durability (transaction's effects are permanent after it commits, its changes should survive system failures)

11.30 Continued Integrity of Stored Data*CONTROL OBJECTIVE*

Management should ensure that the integrity and correctness of the data kept on files and other media (e.g., electronic cards) is checked periodically. Specific attention should be paid to value tokens, reference files and files containing privacy information.

This page intentionally left blank

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing facilities

that satisfies the business requirement

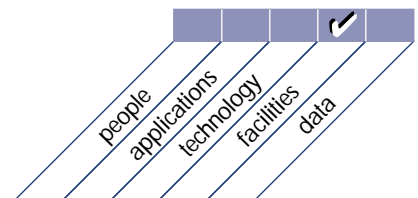

to provide a suitable physical surrounding which protects the IT
equipment and people against man-made and natural hazards

is enabled by

the installation of suitable environmental and physical controls which
are regularly reviewed for their proper functioning

and takes into consideration

- access to facilities
- site identification
- physical security
- inspection and escalation policies
- business continuity planning and crisis management
- personnel health and safety
- preventive maintenance policies
- environmental threat protection
- automated monitoring

DETAILED CONTROL OBJECTIVES

12 MANAGE FACILITIES**12.1 Physical Security***CONTROL OBJECTIVE*

Appropriate physical security and access control measures should be established for IT facilities, including off-site use of information devices in conformance with the general security policy. Physical security and access controls should address not only the area containing system hardware, but also locations of wiring used to connect elements of the system, supporting services (such as electric power), backup media and any other elements required for the system's operation. Access should be restricted to individuals who have been authorised to gain such access. Where IT resources are located in public areas, they should be appropriately protected to prevent or deter loss or damage from theft or vandalism.

12.2 Low Profile of the IT Site*CONTROL OBJECTIVE*

IT management should ensure a low profile is kept and the physical identification of the site of the IT operations is limited.

12.3 Visitor Escort*CONTROL OBJECTIVE*

Appropriate procedures are to be in place ensuring that individuals who are not members of the IT function's operations group are escorted by a member of that group when they must enter the computer facilities. A visitor's log should be kept and reviewed regularly.

12.4 Personnel Health and Safety*CONTROL OBJECTIVE*

Health and safety practices should be put in place and maintained in conformance with applicable international, national, regional, state and local laws and regulations.

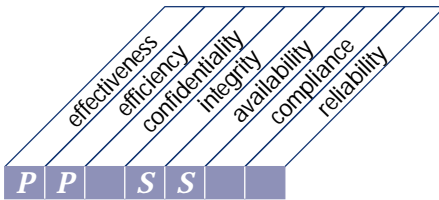

12.5 Protection Against Environmental Factors*CONTROL OBJECTIVE*

IT management should assure that sufficient measures are put in place and maintained for protection against environmental factors (e.g., fire, dust, power, excessive heat and humidity). Specialised equipment and devices to monitor and control the environment should be installed.

12.6 Uninterruptible Power Supply*CONTROL OBJECTIVE*

Management should assess regularly the need for uninterruptable power supply batteries and generators for critical IT applications to secure against power failures and fluctuations. When justified, the most appropriate equipment should be installed.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
managing operations

that satisfies the business requirement

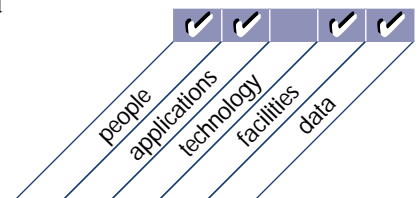

to ensure that important IT support functions are performed regularly
and in an orderly fashion

is enabled by

a schedule of support activities which is recorded and cleared for the
accomplishment of all activities

and takes into consideration

- operations procedure manual
- start-up process documentation
- network services management
- workload and personnel scheduling
- shift hand-over process
- system event logging
- coordination with change, availability and business continuity management
- preventive maintenance
- service level agreements
- automated operations
- incident logging, tracking and escalation

DETAILED CONTROL OBJECTIVES

13 MANAGE OPERATIONS**13.1 Processing Operations Procedures and Instructions Manual***CONTROL OBJECTIVE*

IT management should establish and document standard procedures for IT operations (including network operations). All IT solutions and platforms in place should be operated using these procedures, which should be reviewed periodically to ensure effectiveness and adherence.

13.2 Start-up Process and Other Operations Documentation*CONTROL OBJECTIVE*

IT management should ensure that the operations staff is adequately familiar and confident with the start-up process and other operations tasks by having them documented, periodically tested and adjusted when required.

13.3 Job Scheduling*CONTROL OBJECTIVE*

IT management should ensure that the continuous scheduling of jobs, processes and tasks is organised into the most efficient sequence, maximising throughput and utilisation, to meet the objectives set in service level agreements. The initial schedules as well as changes to these schedules should be appropriately authorised.

13.4 Departures from Standard Job Schedules*CONTROL OBJECTIVE*

Procedures should be in place to identify, investigate and approve departures from standard job schedules.

13.5 Processing Continuity*CONTROL OBJECTIVE*

Procedures should require processing continuity during operator shift changes by providing for formal handover of activity, status updates and reports on current responsibilities.

13.6 Operations Logs*CONTROL OBJECTIVE*

Management controls should guarantee that sufficient chronological information is being stored in operations logs to enable the reconstruction, review and examination of the time sequences of processing and the other activities surrounding or supporting processing.

13.7 Safeguard Special Forms and Output Devices*CONTROL OBJECTIVE*

Management should establish appropriate physical safeguards over special forms, such as negotiable instruments, and over sensitive output devices, such as signature cartridges, taking into consideration proper accounting of IT resources, forms or items requiring additional protection and inventory management.

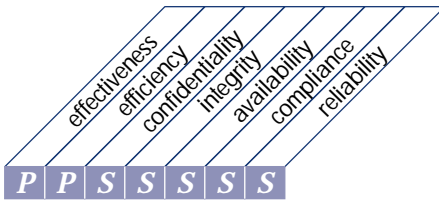

13.8 Remote Operations*CONTROL OBJECTIVE*

For remote operations, specific procedures should ensure that the connection and disconnection of the links to the remote site(s) are defined and implemented.

This page intentionally left blank

MONITORING

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
monitoring the processes

that satisfies the business requirement

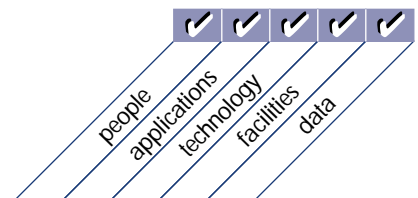

to ensure the achievement of the performance objectives set for the IT processes

is enabled by

the definition of relevant performance indicators, the systematic and timely reporting of performance and prompt acting upon deviations

and takes into consideration

- scorecards with performance drivers and outcome measures
- customer satisfaction assessments
- management reporting
- knowledge base of historical performance
- external benchmarking

DETAILED CONTROL OBJECTIVES

1 MONITOR THE PROCESSES

1.1 Collecting Monitoring Data

CONTROL OBJECTIVE

For the IT and internal control processes, management should ensure relevant performance indicators (e.g., benchmarks) from both internal and external sources are being defined, and that data is being collected for the creation of management information reports and exception reports regarding these indicators. Controls should also be aimed at validating the propriety and integrity of both organisational and individual performance measures and indicators.

1.2 Assessing Performance

CONTROL OBJECTIVE

Services to be delivered by the IT function should be measured (key performance indicators and/or critical success factors) by management and be compared with target levels. Assessments of the IT function should be performed on a continuous basis.

1.3 Assessing Customer Satisfaction

CONTROL OBJECTIVE

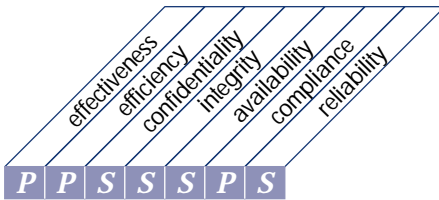

At regular intervals management should measure customer satisfaction regarding the services delivered by the IT function to identify shortfalls in service levels and establish improvement objectives.

1.4 Management Reporting

CONTROL OBJECTIVE

Management reports should be provided for senior management's review of the organisation's progress toward identified goals. Status reports should include the extent to which planned objectives have been achieved, deliverables obtained, performance targets met and risks mitigated. Upon review, appropriate management action should be initiated and controlled.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of

assessing internal control adequacy

that satisfies the business requirement

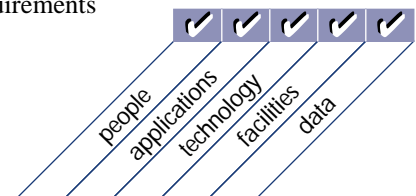

to ensure the achievement of the internal control objectives set for the IT processes

is enabled by

the commitment to monitoring internal controls, assessing their effectiveness, and reporting on them on a regular basis

and takes into consideration

- responsibilities for internal control
- ongoing internal control monitoring
- benchmarks
- error and exception reporting
- self-assessments
- management reporting
- compliance with legal and regulatory requirements

DETAILED CONTROL OBJECTIVES

2 ASSESS INTERNAL CONTROL ADEQUACY

stated or implied security and internal control requirements. Ongoing monitoring activities by management should look for vulnerabilities and security problems.

2.1 Internal Control Monitoring*CONTROL OBJECTIVE*

Management should monitor the effectiveness of internal controls in the normal course of operations through management and supervisory activities, comparisons, reconciliations and other routine actions. Deviations should evoke analysis and corrective action. In addition, deviations should be communicated to the individual responsible for the function and also at least one level of management above that individual. Serious deviations should be reported to senior management.

2.2 Timely Operation of Internal Controls*CONTROL OBJECTIVE*

Reliance on internal controls requires that controls operate promptly to highlight errors and inconsistencies, and that these are corrected before they impact production and delivery. Information regarding errors, inconsistencies and exceptions should be kept and systematically reported to management.

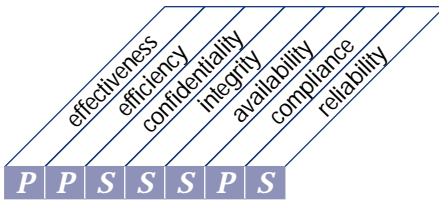

2.3 Internal Control Level Reporting*CONTROL OBJECTIVE*

Management should report information on internal control levels and exceptions to the affected parties to ensure the continued effectiveness of its internal control system. Actions should be taken to identify what information is needed at a particular level of decision making.

2.4 Operational Security and Internal Control Assurance*CONTROL OBJECTIVE*

Operational security and internal control assurance should be established and periodically repeated, with self-assessment or independent audit to examine whether or not the security and internal controls are operating according to the

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
obtaining independent assurance

that satisfies the business requirement

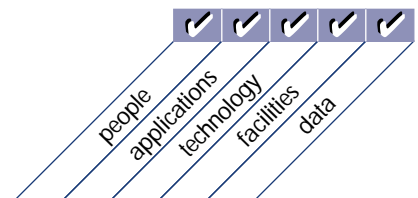

to increase confidence and trust among the organisation, customers,
and third-party providers

is enabled by

independent assurance reviews carried out at regular intervals

and takes into consideration

- independent certifications and accreditation
- independent effectiveness evaluations
- independent assurance of compliance with laws and regulatory requirements
- independent assurance of compliance with contractual commitments
- third-party service provider reviews and benchmarking
- performance of assurance reviews by qualified personnel
- proactive audit involvement

Planning &
Organisation

Acquisition &
Implementation

Delivery &
Support

Monitoring

DETAILED CONTROL OBJECTIVES

3 OBTAIN INDEPENDENT ASSURANCE

3.1 Independent Security and Internal Control Certification/Accreditation of IT Services

CONTROL OBJECTIVE

Management should obtain independent certification/accreditation of security and internal controls prior to implementing critical new IT services and re-certification/re-accreditation of these services on a routine cycle after implementation.

3.2 Independent Security and Internal Control Certification/Accreditation of Third-Party Service Providers

CONTROL OBJECTIVE

Management should obtain independent certification/accreditation of security and internal controls prior to using IT service providers and re-certification/re-accreditation on a routine cycle.

3.3 Independent Effectiveness Evaluation of IT Services

CONTROL OBJECTIVE

Management should obtain independent evaluation of the effectiveness of IT services on a routine cycle.

3.4 Independent Effectiveness Evaluation of Third-Party Service Providers

CONTROL OBJECTIVE

Management should obtain independent evaluation of the effectiveness of IT service providers on a routine cycle.

3.5 Independent Assurance of Compliance with Laws and Regulatory Requirements and Contractual Commitments

CONTROL OBJECTIVE

Management should obtain independent assurance of the IT function's compliance with legal and regulatory requirements, and contractual commitments on a routine cycle.

3.6 Independent Assurance of Compliance with Laws and Regulatory Requirements and Contractual Commitments by Third-Party Service Providers

CONTROL OBJECTIVE

Management should obtain independent assurance of third-party service providers' compliance with legal and regulatory requirements and contractual commitments on a routine cycle.

3.7 Competence of Independent Assurance Function

CONTROL OBJECTIVE

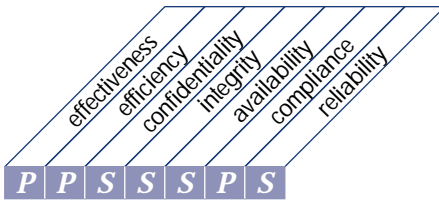

Management should ensure that the independent assurance function possesses the technical competence, and skills and knowledge necessary to perform such reviews in an effective, efficient and economical manner.

3.8 Proactive Audit Involvement

CONTROL OBJECTIVE

IT management should seek audit involvement in a proactive manner before finalising IT service solutions.

HIGH-LEVEL CONTROL OBJECTIVE

Control over the IT process of
providing for independent audit

that satisfies the business requirement

to increase confidence levels and benefit from best practice advice

is enabled by

independent audits carried out at regular intervals

and takes into consideration

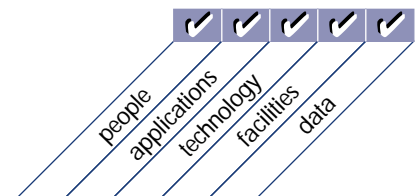

- audit independence
- proactive audit involvement
- performance of audits by qualified personnel
- clearance of findings and recommendations
- follow-up activities
- impact assessments of audit recommendations (costs, benefits and risks)

Planning &
Organisation

Acquisition &
Implementation

Delivery &
Support

Monitoring

DETAILED CONTROL OBJECTIVES

4 PROVIDE FOR INDEPENDENT AUDIT

4.1 Audit Charter

CONTROL OBJECTIVE

A charter for the audit function should be established by the organisation's senior management. This document should outline the responsibility, authority and accountability of the audit function. The charter should be reviewed periodically to assure that the independence, authority and accountability of the audit function are maintained.

4.2 Independence

CONTROL OBJECTIVE

The auditor should be independent from the auditee in attitude and appearance (actual and perceived). Auditors should not be affiliated with the section or department being audited, and, to the extent possible, should also be independent of the subject organisation itself. Thus, the audit function is to be sufficiently independent of the area being audited to permit objective completion of the audit.

4.3 Professional Ethics and Standards

CONTROL OBJECTIVE

The audit function should ensure adherence to applicable codes of professional ethics (e.g., Code of Professional Ethics of the Information Systems Audit and Control Association) and auditing standards (e.g., Standards for Information Systems Auditing of the Information Systems Audit and Control Association) in all that they do. Due professional care should be exercised in all aspects of the audit work, including the observance of applicable audit and IT standards.

4.4 Competence

CONTROL OBJECTIVE

Management should ensure that the auditors responsible for the review of the organisation's IT activities are technically competent and collectively possess the skills and knowledge (i.e., CISA domains) necessary to perform such reviews in an effective, efficient and economical manner. Management should ensure that audit staff assigned to information systems auditing tasks maintain their technical competence through appropriate continuing professional education.

4.5 Planning

CONTROL OBJECTIVE

Senior management should establish a plan to ensure that regular and independent audits are obtained regarding the effectiveness, efficiency and economy of security and internal control procedures, and management's ability to control IT function activities. Senior management should determine priorities with regard to obtaining independent audits within this plan. Auditors should plan the information systems audit work to address the audit objectives and to comply with applicable professional auditing standards.

4.6 Performance of Audit Work

CONTROL OBJECTIVE

Audits should be appropriately supervised to provide assurances that audit objectives are achieved and applicable professional auditing standards are met. Auditors should ensure that they obtain sufficient, reliable, relevant and useful evidence to achieve the audit objectives effectively. The audit findings and conclusions are to be supported by appropriate analysis and interpretation of this evidence.

continued on next page

DETAILED CONTROL OBJECTIVES *continued*

4.7 **Reporting**

CONTROL OBJECTIVE

The organisation's audit function should provide a report, in an appropriate form, to intended recipients upon the completion of audit work. The audit report should state the scope and objectives of the audit, the period of coverage, and the nature and extent of the audit work performed. The report should identify the organisation, the intended recipients and any restrictions on circulation. The audit report should also state the findings, conclusions and recommendations concerning the audit work performed, and any reservations or qualifications that the auditor has with respect to the audit.

4.8 **Follow-up Activities**

CONTROL OBJECTIVE

Resolution of audit comments rests with management. Auditors should request and evaluate appropriate information on previous findings, conclusions and recommendations to determine whether appropriate actions have been implemented in a timely manner.

IT GOVERNANCE MANAGEMENT GUIDELINE

The following Management Guideline and Maturity Model identify the Critical Success Factors (CSFs), Key Goal Indicators (KGIs), Key Performance Indicators (KPIs) and Maturity Model for **IT governance**. First, IT governance is defined, articulating the business need. Next, the information criteria related to IT governance are identified. The business need is measured by the KGIs and enabled by a control statement, leveraged by all the IT resources. The achievement of the enabling control statement is measured by the KPIs, which consider the CSFs. The Maturity Model is used to evaluate an organisation's level of achievement of IT governance—from Non-existent (the lowest level) to Initial/Ad Hoc, to Repeatable but Intuitive, to Defined Process, to Managed and Measurable, to Optimised (the highest level). To achieve the Optimised maturity level for IT governance, an organisation must be at least at the Optimised level for the Monitoring domain and at least at the Managed and Measurable level for all other domains.

(See the COBIT *Management Guidelines* for a thorough discussion of the use of these tools.)

IT GOVERNANCE MANAGEMENT GUIDELINE

Governance over information technology and its processes with the business goal of adding value, while balancing risk versus return

ensures delivery of information to the business that addresses the required **Information Criteria** and is measured by **Key Goal Indicators**

is enabled by creating and maintaining a system of process and control excellence appropriate for the business that directs and monitors the business value delivery of IT

considers **Critical Success Factors** that leverage all **IT Resources** and is measured by **Key Performance Indicators**

Critical Success Factors

- IT governance activities are integrated into the enterprise governance process and leadership behaviours
- IT governance focuses on the enterprise goals, strategic initiatives, the use of technology to enhance the business and on the availability of sufficient resources and capabilities to keep up with the business demands
- IT governance activities are defined with a clear purpose, documented and implemented, based on enterprise needs and with unambiguous accountabilities
- Management practices are implemented to increase efficient and optimal use of resources and increase the effectiveness of IT processes
- Organisational practices are established to enable: sound oversight; a control environment/culture; risk assessment as standard practice; degree of adherence to established standards; monitoring and follow up of control deficiencies and risks
- Control practices are defined to avoid breakdowns in internal control and oversight
- There is integration and smooth interoperability of the more complex IT processes such as problem, change and configuration management
- An audit committee is established to appoint and oversee an independent auditor, focusing on IT when driving audit plans, and review the results of audits and third-party reviews.

Information Criteria

effectiveness
efficiency
confidentiality
integrity
availability
compliance
reliability

IT Resources

people
applications
technology
facilities
data

Key Goal Indicators

- Enhanced performance and cost management
- Improved return on major IT investments
- Improved time to market
- Increased quality, innovation and risk management
- Appropriately integrated and standardised business processes
- Reaching new and satisfying existing customers
- Availability of appropriate bandwidth, computing power and IT delivery mechanisms
- Meeting requirements and expectations of the customer of the process on budget and on time
- Adherence to laws, regulations, industry standards and contractual commitments
- Transparency on risk taking and adherence to the agreed organisational risk profile
- Benchmarking comparisons of IT governance maturity
- Creation of new service delivery channels

Key Performance Indicators

- Improved cost-efficiency of IT processes (costs vs. deliverables)
- Increased number of IT action plans for process improvement initiatives
- Increased utilisation of IT infrastructure
- Increased satisfaction of stakeholders (survey and number of complaints)
- Improved staff productivity (number of deliverables) and morale (survey)
- Increased availability of knowledge and information for managing the enterprise
- Increased linkage between IT and enterprise governance
- Improved performance as measured by IT balanced scorecards

IT Governance Maturity Model

Governance over information technology and its processes with the business goal of adding value, while balancing risk versus return

- 0 Non-existent** There is a complete lack of any recognisable IT governance process. The organisation has not even recognised that there is an issue to be addressed and hence there is no communication about the issue.
- 1 Initial /Ad Hoc** There is evidence that the organisation has recognised that IT governance issues exist and need to be addressed. There are, however, no standardised processes, but instead there are ad hoc approaches applied on an individual or case-by-case basis. Management's approach is chaotic and there is only sporadic, non-consistent communication on issues and approaches to address them. There may be some acknowledgement of capturing the value of IT in outcome-oriented performance of related enterprise processes. There is no standard assessment process. IT monitoring is only implemented reactively to an incident that has caused some loss or embarrassment to the organisation.
- 2 Repeatable but Intuitive** There is global awareness of IT governance issues. IT governance activities and performance indicators are under development, which include IT planning, delivery and monitoring processes. As part of this effort, IT governance activities are formally established into the organisation's change management process, with active senior management involvement and oversight. Selected IT processes are identified for improving and/or controlling core enterprise processes and are effectively planned and monitored as investments, and are derived within the context of a defined IT architectural framework. Management has identified basic IT governance measurements and assessment methods and techniques, however, the process has not been adopted across the organisation. There is no formal training and communication on governance standards and responsibilities are left to the individual. Individuals drive the governance processes within various IT projects and processes. Limited governance tools are chosen and implemented for gathering governance metrics, but may not be used to their full capacity due to a lack of expertise in their functionality.
- 3 Defined Process** The need to act with respect to IT governance is understood and accepted. A baseline set of IT governance indicators is developed, where linkages between outcome measures and performance drivers are defined, documented and integrated into strategic and operational planning and monitoring processes. Procedures have been standardised, documented and implemented. Management has communicated standardised procedures and informal training is established. Performance indicators over all IT governance activities are being recorded and tracked, leading to enterprise-wide improvements. Although measurable, procedures are not sophisticated, but are the formalisation of existing practices. Tools are standardised, using currently available techniques. IT Balanced Business Scorecard ideas are being adopted by the organization. It is, however, left to the individual to get training, to follow the standards and to apply them. Root cause analysis is only occasionally applied. Most processes are monitored against some (baseline) metrics, but any deviation, while mostly being acted upon by individual initiative, would unlikely be detected by management. Nevertheless, overall accountability of key process performance is clear and management is rewarded based on key performance measures.
- 4 Managed and Measurable** There is full understanding of IT governance issues at all levels, supported by formal training. There is a clear understanding of who the customer is and responsibilities are defined and monitored through service level agreements. Responsibilities are clear and process ownership is established. IT processes are aligned with the business and with the IT strategy. Improvement in IT processes is based primarily upon a quantitative understanding and it is possible to monitor and measure compliance with procedures and process metrics. All process stakeholders are aware of risks, the importance of IT and the opportunities it can offer. Management has defined tolerances under which processes must operate. Action is taken in many, but not all cases where processes appear not to be working effectively or

efficiently. Processes are occasionally improved and best internal practices are enforced. Root cause analysis is being standardised. Continuous improvement is beginning to be addressed. There is limited, primarily tactical, use of technology, based on mature techniques and enforced standard tools. There is involvement of all required internal domain experts. IT governance evolves into an enterprise-wide process. IT governance activities are becoming integrated with the enterprise governance process.

- 5 **Optimised** There is advanced and forward-looking understanding of IT governance issues and solutions. Training and communication is supported by leading-edge concepts and techniques. Processes have been refined to a level of external best practice, based on results of continuous improvement and maturity modeling with other organisations. The implementation of these policies has led to an organisation, people and processes that are quick to adapt and fully support IT

governance requirements. All problems and deviations are root cause analysed and efficient action is expediently identified and initiated. IT is used in an extensive, integrated and optimised manner to automate the workflow and provide tools to improve quality and effectiveness. The risks and returns of the IT processes are defined, balanced and communicated across the enterprise. External experts are leveraged and benchmarks are used for guidance. Monitoring, self-assessment and communication about governance expectations are pervasive within the organisation and there is optimal use of technology to support measurement, analysis, communication and training. Enterprise governance and IT governance are strategically linked, leveraging technology and human and financial resources to increase the competitive advantage of the enterprise.

COBIT PROJECT DESCRIPTION

The COBIT project continues to be supervised by a Project Steering Committee formed by international representatives from industry, academia, government and the security and control profession. The Project Steering Committee has been instrumental in the development of the COBIT *Framework* and in the application of the research results. International working groups were established for the purpose of quality assurance and expert review of the project's interim research and development deliverables. Overall project guidance is provided by the IT Governance Institute.

RESEARCH AND APPROACH FOR EARLIER DEVELOPMENT

Starting with the COBIT *Framework* defined in the 1st edition, the application of international standards and guidelines and research into best practices have led to the development of the control objectives. Audit guidelines were next developed to assess whether these control objectives are appropriately implemented.

Research for the 1st and 2nd editions included the collection and analysis of identified international sources and was carried out by teams in Europe (Free University of Amsterdam), the US (California Polytechnic University) and Australia (University of New South Wales). The researchers were charged with the compilation, review, assessment and appropriate incorporation of international technical standards, codes of conduct, quality standards, professional standards in auditing and industry practices and requirements, as they relate to the *Framework* and to individual control objectives. After collection and analysis, the researchers were challenged to examine each domain and process in depth and suggest new or modified control objectives applicable to that particular IT process. Consolidation of the results was performed by the COBIT Steering Committee and the Director of Research of ISACF.

RESEARCH AND APPROACH FOR THE 3RD EDITION

The COBIT 3rd Edition project consisted of developing the *Management Guidelines* and updating COBIT 2nd Edition based on new and revised international references.

Furthermore, the COBIT *Framework* was revised and enhanced to support increased management control, to

introduce performance management and to further develop IT governance. In order to provide management with an application of the *Framework* so that it can assess and make choices for control implementation and improvements over its information and related technology, as well as measure performance, the *Management Guidelines* include Maturity Models, Critical Success Factors, Key Goal Indicators and Key Performance Indicators related to the *Control Objectives*.

Management Guidelines was developed by using a worldwide panel of 40 experts from industry, academia, government and the IT security and control profession. These experts participated in a residential workshop guided by professional facilitators and using development guidelines defined by the COBIT Steering Committee. The workshop was strongly supported by the Gartner Group and PricewaterhouseCoopers, who not only provided thought leadership but also sent several of their experts on control, performance management and information security. The results of the workshop were draft Maturity Models, Critical Success Factors, Key Goal Indicators and Key Performance Indicators for each of COBIT's 34 high-level control objectives. Quality assurance of the initial deliverables was conducted by the COBIT Steering Committee and the results were posted for exposure on the ISACA web site. The *Management Guidelines* document was finally prepared to offer a new management-oriented set of tools, while providing integration and consistency with the COBIT *Framework*.

The update to the *Control Objectives*, based on new and revised international references, was conducted by members of ISACA chapters, under the guidance of COBIT Steering Committee members. The intention was not to perform a global analysis of all material or a redevelopment of the *Control Objectives*, but to provide an incremental update process.

The results of the development of the *Management Guidelines* were then used to revise the COBIT *Framework*, especially the considerations, goals and enabler statements of the high-level control objectives.

GLOSSARY OF TERMS

AICPA	American Institute of Certified Public Accountants
CICA	Canadian Institute of Chartered Accountants
CISA	Certified Information Systems Auditor
CCEB	Common Criteria for Information Technology Security
Control	The policies, procedures, practices and organisational structures designed to provide reasonable assurance that business objectives will be achieved and that undesired events will be prevented or detected and corrected
COSO	Committee of Sponsoring Organisations of the Treadway Commission
DRI	Disaster Recovery Institute International
DTI	Department of Trade and Industry of the United Kingdom
EDIFACT	Electronic Data Interchange for Administration, Commerce and Trade
EDPAF	Electronic Data Processing Auditors Foundation (now ISACF)
ESF	European Security Forum, a cooperation of 70+ primarily European multi-nationals with the goal of researching common security and control issues in IT
GAO	US General Accounting Office
I4	International Information Integrity Institute, similar association as the ESF, with similar goals but primarily US-based and run by Stanford Research Institute
IBAG	Infosec Business Advisory Group, industry representatives who advise the Infosec Committee. This Committee is composed of government officials of the European Community and itself advises the European Commission on IT security matters.
IFAC	International Federation of Accountants
IIA	Institute of Internal Auditors
INFOSEC	Advisory Committee for IT Security Matters to the European Commission
ISACA	Information Systems Audit and Control Association
ISACF	Information Systems Audit and Control Foundation
ISO	International Organisation for Standardisation (with offices in Geneva, Switzerland)
ISO9000	Quality management and quality assurance standards as defined by ISO
IT Control Objective	A statement of the desired result or purpose to be achieved by implementing control procedures in a particular IT activity
ITIL	Information Technology Infrastructure Library
ITSEC	Information Technology Security Evaluation Criteria. The harmonised criteria of France, Germany, the Netherlands and the United Kingdom, since then also supported by the European Commission (see also TCSEC, the US equivalent).
NBS	National Bureau of Standards of the US
NIST (formerly NBS)	National Institute of Standards and Technology, based in Washington, DC
NSW	New South Wales, Australia
OECD	Organisation for Economic Cooperation and Development
OSF	Open Software Foundation
PCIE	President's Council on Integrity and Efficiency
SPICE	Software Process Improvement and Capability Determination—a standard on software process improvement
TCSEC	Trusted Computer System Evaluation Criteria, also known as The Orange Book: security evaluation criteria for computer systems as originally defined by the US Department of Defense. See also ITSEC, the European equivalent.
TickIT	Guide to Software Quality Management System Construction and Certification

- ☐ I am interested in learning more about how COBIT can be used in my organisation.
Please ask a representative to contact me.
- ☐ Please send me more information about:
- ☐ Purchasing other COBIT products
 - ☐ COBIT Training Courses (in-house or general session)
 - ☐ Certified Information Systems Auditor™ (CISA®) Certification
 - ☐ *Information Systems Control Journal*
 - ☐ Information Systems Audit and Control Association (ISACA)

Thank you!

All respondents will be acknowledged.
