

REV'08
Working Session

Consider a typical RE process:

Based on [Wiegiers 1999]

Group A) Where is visualization being used in RE and what for?

1. Catalog the work by listing, grouping and labeling the visualization offerings we know of:
 - Take a look at the various REV visualization offerings
 - Make a list of which aspect(s) of RE they purport to assist
 - Which *particular* problems do they claim to support?
 - List any other relevant work you know of & what aspect of RE it supposedly assists with
2. Assess coverage (i.e., the current scope of visualization support & use in RE):
 - Which aspects of RE have more visual techniques to support them than others?
 - Where do we have gaps (i.e., where could we use visualization more)?
 - What *particular* problems do we have in these RE areas that visualization could potentially help with?
3. Future research:
 - What should we be doing?
 - Challenges?

Group B) A framework for evaluating RE visualization offerings

1. How do we determine what is a good/bad visualization?
 - What are the criteria we should be using to evaluate them?
 - Brainstorm examples of superb visualizations from other domains -- why do they work?
2. How well are we doing in RE? (i.e., status assessment):
 - Take a look at the various REV visualization offerings
 - How do the current offerings stack up?
 - Is there any evidence they are used?
 - Is there any evidence they are useful?
 - Do you understand them?
 - Any personal favourites?
3. Future research:
 - What should we be doing?
 - Challenges?

Plan

- 2 groups -- A & B
- Brainstorm bullet points for 1 hour
- 10 minutes for each group to report back (appoint a spokesperson)
- 10 minutes for a wrap-up -- consensual challenges (towards a research agenda for REV)
